Honorable Chair and Members of the Transportation Committee City Hall Torrance, California

Members of the Committee:

SUBJECT: Transportation Committee – Discuss Options for Landing Fees and Reduction of Aircraft Operations at Torrance Municipal Airport – Zamperini Field

RECOMMENDATION

Recommendation of the City Attorney, General Services Director, and Community Development Director that the Transportation Committee review options and provide direction on:

- 1. Reducing allowable flights by restricting training flights and prohibiting training flights from outside agencies;
- 2. Limiting or prohibiting use of the south runway; and
- 3. Changing flight school training hours by amending the Torrance Municipal Code (TMC).

It is further recommended that the Transportation Committee receive a status on the Request for Proposal (RFP) for landing fees, per City Council action on November 8, 2022.

FUNDING

Not applicable.

BACKGROUND

At its meeting of November 8, 2022, the City Council was presented with Item 9I: Accept and File Torrance Municipal Airport – Zamperini Field Noise Abatement and Airport Operations Update and Review and Provide Direction on Implementation of Landing Fees. The primary topic of discussion was the increase in flights to and from the Airport, mainly consisting of flight schools both based and transient. The repetitive nature of these flights over adjacent neighborhoods has caused many residents to request the City take measures to mitigate the number of flights and the noise associated with them.

During this meeting, staff provided an overview on the Airport Noise Monitoring System, early left turns, and airport operations. Additionally, as part of the presentation, staff explained the ongoing public education of the City noise ordinance to pilots and flight schools as well as the promotion of the new revised Airport webpage, which includes dedicated links to Noise Abatement, Noise Lab, and FAQs.

Further, staff provided an update on the Noise Abatement signage installed at the Airport. In summary, staff has been working in collaboration with the Torrance Airport Association in updating the Noise Abatement signage, as the current signage is old and tattered (see Attachment B). The Torrance Airport Association (TAA) has provided staff with potential pictorial diagrams

consisting of multiple colors with altitude levels (see Attachment C). Staff is not opposed to changing the signs to the suggested pictorial diagrams but are not in agreement with the color scheme or the request to include altitude levels. All currently installed noise abatement signage follows the standards outlined in the FAA Advisory Circular (AC) 150/5340-18G, which is a yellow background with a black inscription (see Attachment D). Additionally, staff feels including the altitude levels on the signs could be a potential liability for the City. Based on the submitted signage by the TAA along with the standards outlined by the FAA, staff developed new pictorial signage. This new signage has been reviewed by the City's outside legal counsel, which specializes in Aviation Law, and found to comply with the FAA standard of black inscription on yellow background (see Attachment E). Staff is now working with a signage vendor to have the new signs produced. Once received, staff will work with the General Services Department to have the signs installed. In the meantime, staff will be updating all educational material to include diagrams of the new signage.

At the conclusion of the November 8th meeting, the City Council proposed several options be researched, including the reduction of training flights for based and transient flight schools, limiting the use of the south runway and amending the TMC to change flight-training hours. A motion was made and approved to have these items heard at the Transportation Committee of the City Council. Within that motion, the City Council also directed staff to develop an RFP for a landing fee program to be reviewed by the Transportation Committee prior to implementation.

ANALYSIS

Restricting Training Flights

If directed, staff will work with the City Attorney and outside Counsel specializing in airport and aviation federal law to determine the legalities of restricting based and transient flight schools from using the Airport.

Limiting or Prohibiting the use of the South Runway

If directed, staff will work with the FAA to explore limiting or prohibiting use of the south runway. This can be for certain days / hours / or periods of use where it would most beneficial for easing air traffic south of the Airport.

Amending TMC for Flight Training

If directed, staff will research amending the existing municipal code to change the hours of flight training. This will also require the assistance of outside Counsel to determine if any changes made to the City's current noise abatement program would affect any grandfathered noise limits that were in place prior to the Airport Noise and Capacity Act of 1990 (ANCA). It is possible that certain changes would require the City to abide by post ANCA noise restrictions, which may have an adverse impact on the surrounding community.

Based on direction provided by the Transportation Committee, staff would need to conduct the needed research and report back at a future meeting for further discussion and potential recommendations to the City Council.

Status on the Request for Proposal (RFP) for Landing Fees

Staff is currently developing an RFP for the implementation of landing fees at the Airport. Included, but not limited to, are the following objectives sought for the Airport:

- Track and identify aircraft activities 24 hours a day
- Separate based aircraft activity from transient aircraft activity
- Electronically convert activities into billable events
- Identify the aircraft's owner
- Create and mail invoices or email invoices
- Collect the amounts remitted by the aircraft operator on the airport's behalf
- · Conduct active collections on accounts receivable
- Generate reports
- Issue the Airport (City) the revenue collected
- Provide a live customer service call center
- Provide revenue and aircraft activity tracking reports via a web-based portal
- Provide all necessary equipment to perform the scope of work

Staff did explore the possibility of entering into a cooperative agreement with a landing fee vendor in order to expedite the process. However, as billings are typically collected based on an airport's operations and aircraft type, vendors were unable to match terms and conditions of any current agreements.

It is anticipated that the RFP for landing fees will be issued in early January 2023 with a due date in late February 2023. Once received and vetted by City staff, the RFP results and recommendation will return to the Transportation Committee for further direction.

Respectfully Submitted,

Patrick Q. Sullivan

Council Meeting of November 8, 2022

Honorable Mayor and Members of the City Council City Hall Torrance, California

Members of the Council:

SUBJECT: City Attorney, Community Development, and General Services - Accept and File Torrance Municipal Airport (Zamperini Field) Noise Abatement and Airport Operations Update and Review and Provide Direction on Implementation of Landing Fees. Expenditure: None.

RECOMMENDATION

Recommendation of the City Attorney, Community Development Director, and General Services Director that City Council:

- 1) Accept and file the Torrance Municipal Airport (Zamperini Field) Noise Abatement and Airport Operations update; and
- 2) Review and Provide Direction on Options for the Implementation of Landing Fees at Torrance Municipal Airport (Zamperini Field).

BACKGROUND AND ANALYSIS

Airport Noise Monitoring System

A Noise Abatement Program was established at the Torrance Airport in late 1977 to address the noise generated by aircraft operations. Noise violations are detected by a series of seven noise monitors strategically placed around the airport. On September 22, 2020, City Council declined to renew an Airport Noise Abatement contract with Brüel & Kjaer. Instead, City Council instructed staff to monitor community complaints and aircraft violations and report back to the Airport Commission in 2021 with an assessment on whether there was still a need for an Airport Noise Monitoring System ("System").

On March 11, 2021, staff presented a report on the Airport Noise Abatement program to the Airport Commission. The report included correspondence from the public, a listing of all complaints and any violations that could be identified, and a recommendation that staff prepare a Request for Proposal ("RFP") for new System. During this meeting, there were 42 members of the public in attendance. Out of the 42 community members, 16 spoke with 14 of them in favor of staff's recommendation. Upon the conclusion of this report and all public comments, the Commission voted in favor of staff's recommendation.

On April 20, 2021, City Council voted to authorize the release of a RFP for a new System. Subsequent to the Council meeting, a second Airport Commission meeting addressed the proposed contents of the RFP, to ensure all areas of concern to the public were included. On December 14, 2021, City Council awarded a Consulting Services Agreement

("Agreement") for a System to Casper Airport Solutions ("Consultant") based on the recommendation by staff.

The new Airport Noise Monitoring System went live in July, with all seven-noise monitors collecting data, the noise and radar correlating flights, and the flights being identified by tail numbers. Additionally, since that time, staff has been trained on the corresponding new internal flight tracker and the public facing flight tracker (also known as Noise Lab). The flight trackers provide real-time and historic overview of aircraft movements, flight density, and noise levels around airport (both aircraft and community noise). The internal flight tracker, which is for staff use only, also provides sensitive information such as the owner of the aircraft. In addition, the City's Consultant presented a demonstration of Noise Lab to the Airport Commission at their meeting of August 11, 2022. Following this demonstration, the new public facing flight tracking system went live. Staff is also working with the Consultant on developing a training video for the public facing flight tracking system that, once complete, will be available on the City's Airport website.

In addition to the Airport Noise Monitoring System, staff has been meeting with the different tenants at the Airport and the Federal Aviation Administration ("FAA") staff from the Tower informing them of the new system and educating them on the City's noise ordinance. Staff also updated the City's dedicated Airport webpage to include information on the activation of the Noise Monitoring System, the public facing flight tracking system, and other relevant material. Additionally, staff is in the process of creating new educational material, which will also be available on the City's dedicated Airport webpage as well as sent to all of the tenants. Staff will also be sending the educational material to known flight schools that train at the Airport but are stationed at a surrounding airport (i.e. Long Beach Airport, Compton/Woodley Airport, Fullerton Airport, Santa Monic Airport, San Gabriel Valley Airport, etc.).

Since going live, the City has received 919 noise complaints. Of this number, only 11 were found in violation of the City's Noise Ordinance. Those found in violation were sent a Notice of Violation, which included the ability of the pilot to conduct a noise test with staff. The goal of the noise test is to obtain voluntary compliance of the City's Noise Ordinance by the pilot. If voluntary compliance does not happen and the pilot continues to violate the City's Noise Ordinance, then further enforcement can be used, which would include the appearance before the City's Administrative Hearing Board and ultimately the possibility of a pilot and/or aircraft being denied airport usage. At this point, staff has not received any resistance from pilots, as they all have been cooperated.

Early Left Turns

The Torrance Municipal Code ("TMC") Section 51.2.3(e) states, "Aircraft taking off to the west shall not turn left until they have either reached the ocean or attained an altitude of fifteen hundred (1,500) feet." The reason behind this code section is two-fold. First, the area to the southwest of the airport that is impacted by early turns is predominately single-family residential and therefor noise sensitive. In addition, the terrain to the southwest is steeply rising. The subject section of the TMC was designed as part of the noise abatement program to discourage pilots from flying over rising and noise sensitive terrain until reaching an altitude that would mitigate the noise exposure to the residents below.

While the City recognizes that the FAA is responsible for handling all aircraft flight patterns, it was always the City's understanding that Section 51.2.3(e) of the TMC was enforceable by the City, as it is an important part of the Airport noise abatement program and not a flight restriction. In addition, this section of the TMC was adopted prior to the Airport Noise and Capacity Act of 1990 ("ANCA"), which established FAA authority over most airport noise management, preempting state and local authority.

In early 2020, a member of the Torrance Airport Association ("TAA") reached out to the FAA to inquire if the subject section of the TMC was enforceable by the City. The FAA provided a written response (Attachment B) that states, "Because the Torrance code provision applies to aircraft in flight, it is not consistent with the Federal statutory and regulatory framework described above." The letter also goes on to state "Accordingly, the airport owner or operator has authority to promulgate reasonable, nonarbitrary, and non-discriminatory regulations addressing aircraft noise and appropriate local interests. Friends of E. Hampton, 841 F.3d at 139. Any such restriction would need to comply with the Airport Noise and Capacity Act ("ANCA"), 49 U.S.C. § 47521 et seq., and 14 C.F.R. Part 161, which outlines the process, analysis, and approvals required for imposing a noise or access restriction at the airport." The FAA appears to be treating the subject section of the TMC as a flight restriction as opposed to the City's interpretation that it is a noise restriction.

Staff from both the Community Development Department and the City Attorney's Office have been reaching out to the FAA since 2020 trying to confirm the City's legal authority to enforce the subject section of the TMC (Attachment C & D). In March 2022, the City Attorney's Office received verbal verification from the FAA that the subject section of the TMC is not enforceable by the City, as it pertains to the flight path, which is under the jurisdiction of the FAA exclusively. On August 9, 2022, the City received written confirmation on this ruling from the FAA (see Attachment E). Any complaints related to flight paths, including low-flying aircraft, needs to be reported directly to the FAA for investigation, as again the City does not have jurisdiction over aircraft in flight. It is FAA policy to investigate citizen complaints of low-flying aircraft operated in violation of the Federal Aviation Regulations ("CFR") that might endanger persons or property.

The City Attorney's Office has now engaged outside Counsel that specialized in airport & aviation federal law to assist the City in working in our dealings with the FAA and the ability to enforce the subject section of the TMC.

Additionally, staff has met with both Congressman Lieu and Congresswoman Water's Offices requesting assistance with the FAA on the City's ability to enforce the subject section of the TMC. Staff continues to follow up with both congressional offices. While the City is currently unable to enforce the subject section of the TMC, staff is still able to send out informational notices under a "Fly Friendly" program to those pilots that request an early left turn. It should be noted that these notices would not labeled be as a "Notice of Violation" and staff would not be able to pursue any enforcement. In addition, staff would not be able to send the information notices to pilots where it is confirmed that the turn was directed by the Air Traffic Control Tower, as it would be an aerial directed maneuver.

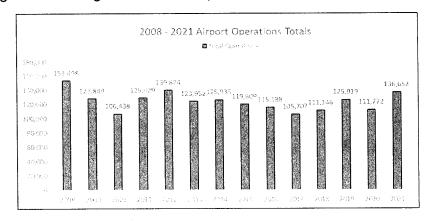

Airfield Operations Status

The General Services Department acts as both the landlord for the City-owned facilities at the Torrance Municipal Airport ("Airport") and as Business Manager for the Airport. As the Business Manager for the Airport, the department oversees hangar and tie down rental agreements, Airport operations and first response, airfield maintenance and review of proposed special events to be held at the Airport.

Over the last three decades (1990, 2000, and 2010), overall Airport operations (as reported by the FAA) have seen a decrease in flights.

1990 – 1999 - 200,917 average flights per year 2000 – 2009 - 161,800 average flights per year 2010 – 2019 - 120,205 average flights per year

Most recently, in 2020, Airport operations saw more than an 11% decrease, which was partly attributed to the coronavirus pandemic. As travel opened up again in 2021, the number of flights increased by over 22% from 2020 and 8.5% from 2019. The operation numbers provided below are for calendar years 2008 – 2021. The chart includes both aircraft landing at and taking off from the Airport, even if it is the same aircraft.

Part of the reason for the increase in Airport operations in 2021 was related to the surge of student pilots. The Airport is home to several flight schools (South Bay Aviation, Sling Pilot Academy, Rolling Hills Aviation, South Bay International Flight Association, Flight, Pradhan Aircraft Works, and Pacific Skies Aviation). All flight schools have seen an increase in flying lessons over the last 2 years, as commercial pilots are highly sought after by airlines. Many current pilots are nearing the mandatory retirement age of 65. According to FAA data supplied by the Regional Airline Association, nearly half of today's qualified pilots will reach mandatory retirement age within 15 years, and about 13% will be required to retire within five years.

In addition to the success of the based flight schools at the Airport, other regional airports have also used Torrance more frequently as a training facility. This has led to an increase of touch and go landings and pattern work that has increased not only the amount of operations, but repetitive flights over surrounding neighborhoods.

At its meeting of September 13, 2022, City Council directed staff to provide the Airport Commission with information to explore the consideration of implementing landing fees at the Torrance Municipal Airport (Zamperini Field). Throughout its history, Torrance has allowed all aircraft to arrive and depart without requiring a fee. Fees are only applied to aircraft either staying overnight or those that are based at the Airport via tie down or hangar rentals.

The idea of landing fees is not a new concept for generating revenue among active airports. Airports within the region that currently implement landing fees include Santa Monica, Catalina (Private Airport), Camarillo, Oxnard, Santa Barbara, Napa and Sonoma. These airports all have similar billing systems, and charge either by weight of the aircraft or simply a flat fee.

In order to institute landing fees at Torrance Airport, an outside vendor must be contracted to administer the program. There is generally a one-time capital expenditure for new equipment, with ongoing annual costs remaining low. A vendor typically tracks aircraft, bills, and collects fees for the Airport while deducting a certain percentage of revenues from the City to operate.

Should landing fees be implemented, the chart below shows an approximation of the amount of billable operations and the net gain to the airport each year. Additional revenue generated by landing fees will contribute to the Airport Enterprise Fund Balance, which currently supports airport projects and improvements.

	Annual Operation s	Billable Operation s	Fixed Wing Operation s	Rotary Aircraft Operations	Annual Net to Airport
Option 1 (Transient only)	49,685	24,842	23,600	1,242	\$281,169
Option 2 (Transient and Based)	124,212	62,106	49,685	12,421	\$650,772

Estimates are based on average airport operations from 2020-2021 and include annual billings from a vendor, minus collection and service fees, and annual equipment leases.

Additionally, the following chart shows several types of aircraft that commonly use Torrance Airport and the associated landing fees that would be charged if implemented. Calculations are based on \$3.00/1,000 lbs., with a minimum for landing fee of \$6.00 per aircraft.

Aircraft Category	Aircraft Type	Maximum Take Off Weight	Landing Fee Cost
Helicopter	R22	1370 lbs.	\$ 6.00
Single Prop	Cessna 172	2,450 lbs.	\$ 7.35
Twin Prop.	Beech Barron	5,400 lbs.	\$16.20
Jet	Citation 550	14,800 lbs.	\$44.40

Conclusion

Staff recommends that City Council provide direction regarding the implementation of landing fees at the Airport. Three potential options include:

- Option 1: Implement landing fees for transient aircraft only. Estimated revenue from fixed wing and rotary aircraft is \$281,169 annually; or
- Option 2: Implement landing fees for transient and based aircraft. Estimated revenue from fixed wing and rotary aircraft is \$\$650,770 annually; or
- Option 3: Remain status quo, no landing fees.

If it is Council's direction to implement landing fees, staff will develop and issue a formal Request for Proposal and return with a recommendation for an award of contract.

Respectfully submitted,

Patrick Q. Sullivan City Attorney

Office of the Chief Counsel

800 independence Ave., S.W. Washington, D.C. 20591

FEB 1 8 2020

Mr. Jim Gates
Torrance Airport Association
2785 Pacific Coast Highway E164
Torrance, CA 90505

Dear Mr. Gates:

Thank you for your letters in which you informed the Federal Aviation Administration (FAA) of your receipt of an "Early Left Turn Violation" from the Community Development Department, City of Torrance. You request the FAA to contact the Torrance City Attorney to "clarify in writing the FAA's exclusive authority" by quoting a statement on the FAA website.

You assert that the City's enforcement of the ordinance requires pilots to make a choice in terms of which directive to comply with: either the Torrance Municipal Code or FAA Air Traffic Control (ATC) instructions. You provided copies of two "Early Left Turn Violation" notices that the City issued in 2019 to pilots. Both notices state that "[w]hile the FAA control tower may have authorized the above noted procedure it is a violation of the Torrance Municipal Code." Both notices state that "future violations are subject to enforcement." You requested the FAA "immediately clarify in writing the FAA's exclusive authority to the Torrance City Attorney." While the FAA declines to send unsolicited correspondence to the Torrance City Attorney, this letter responds to the inquiries you submitted. Our understanding is that the City is yet to bring any enforcement action related to the code provision.

Congress has long vested the FAA with authority to regulate the areas of airspace use, management and efficiency; air traffic control; safety; navigational facilities; and aircraft noise at its source. 49 U.S.C. §§ 40103, 44502, and 44701-44738. In addition, a citizen of the United States has a statutory public right of transit through the navigable airspace. 49 U.S.C. § 40103(a)(2). Courts have held that Congress has exclusively occupied the field of aviation safety and airspace efficiency such that Federal law preempts state requirements that fall within this field. See City of Burbank v. Lockheed Air Terminal, 411 U.S. 624 (1973); American Airlines v. Town of Hempstead, 398 F.2d 369 (2d Cir. 1968), cert. denied, 393 U.S. 1017 (1969). In United States v. City of Blue Ash, 487 F. Supp. 135, aff'd, 621 F.2d 227 (6th Cir. 1980), the court upheld preemption of a local ordinance requiring departing planes to make "Noise Abatement Turns"). See Blue Sky Entertainment, Inc. v. Town of Gardiner, 711 F. Supp. 678, 692 (N.D.N.Y. 1989) ("[i]n fact, federal law in the area of aviation is so pervasive that it preempts a municipal ordinance which attempts to govern the flight paths of aircraft using an airport which has no control tower, is not served by a certified carrier and has no regularly scheduled flights," citing Blue Ash).

State and local governments may protect their citizens through land use controls and other police power measures that do not regulate airspace management or aircraft operations. But that power does not extend to many aspects of aircraft operations, including route, altitude, time of operation, and frequency. See Friends of the E. Hampton Airport, Inc. v. Town of E. Hampton, 841 F.3d 133 (2d Cir. 2016); National Helicopter Corp. v. City of New York, 137 F.3d 81 (2d Cir. 1998).

In addition, State or local governments that own or operate an airport are not prohibited from carrying out their proprietary powers and rights. Accordingly, the airport owner or operator has authority to promulgate reasonable, nonarbitrary, and non-discriminatory regulations addressing aircraft noise and appropriate local interests. Friends of E. Hampton, 841 F.3d at 139. Any such restriction would need to comply with the Airport Noise and Capacity Act (ANCA), 49 U.S.C. § 47521 et seq., and 14 C.F.R. Part 161, which outline the process, analysis, and approvals required for imposing a noise or access restriction at an airport.

Section 51.2.3(e) of the Torrance Municipal Code, "Take Offs and Landings," states, "Aircraft taking off to the west shall not turn left until they have either reached the ocean or attained an altitude of fifteen hundred (1,500) feet." Because the Torrance code provision applies to aircraft in flight, it is not consistent with the Federal statutory and regulatory framework described above. Enforcement of the provision would be at odds with various court opinions. As noted, state and local governments lack the authority to regulate airspace use, management and efficiency; air traffic control; and aircraft noise at its source. Federal courts have found that a navigable airspace free from inconsistent state and local restrictions is essential to the maintenance of a safe and sound air transportation system. See Montalvo v. Spirit Airlines, 508 F.3d 464 (9th Cir. 2007), and French v. Pan Am Express, Inc., 869 F.2d 1 (1st Cir. 1989).

The "Early Left Turn Violation" letters refer to "a noise sensitive area" and noise abatement procedures. The FAA's ATC Tower at Torrance is aware of such procedures. FAA air traffic controllers generally comply with noise abatement procedures to the extent practicable with exceptions for safety, weather, airspace efficiency, and traffic pattern considerations. The pilot in command is responsible for the safe operation of the aircraft and should advise air traffic control if he or she is unable to comply with any air traffic advisory or instruction.

Thank you for the opportunity to review and respond to your concerns. This letter has been coordinated with the General Counsel's Office (C-60), Office of the Secretary of Transportation.

Sincerely,

Lorelei A. Peter

Assistant Chief Counsel Regulations Division

CITY OF TORRANCE COMMUNITY DEVELOPMENT DEPARTMENT

DANNY E. SANTANA COMMUNITY DEVELOPMENT DIRECTOR

November 12, 2020

U.S. Department of Transportation Federal Aviation Administration Office of the Chief Counsel 800 Independence Ave., S.W. Washington, D.C. 20591

Attn: Lorelei A. Peter, Assistant Chief Counsel, Regulations Division

Dear Ms. Peter:

Attached is a response from you to Mr. Jim Gates regarding Section 51.2.3(e) of the Torrance Municipal Code that states, "Aircraft taking off to the west shall not turn left until they have either reached the ocean or attained an altitude of fifteen hundred (1,500) feet." While the City of Torrance recognizes that the FAA has jurisdiction over aircraft in flight, there are two salient points we believe have bearing on the code section that were not contained within Mr. Gate's letter.

First, and most important, our noise ordinance is pre-ANCA, and, as such, it was always the City's understanding that the provisions of the ordinance were grandfathered and therefore enforceable. We have had conversations with FAA representatives in the past, including Reid Wahlberg of Flight Standards, who have assured us that we were, in fact, able to enforce this section, as it is an important part of the Torrance Airport (TOA) noise program.

Second, the reasons behind the code section in question are two-fold: the area to the south west of the airport that is impacted by early turns is predominately single family residential and therefore noise sensitive. In addition, the terrain to the southwest is steeply rising. The subject section was designed as a part of the noise abatement program to discourage pilots from flying over rising and noise sensitive terrain until reaching an altitude that would mitigate the noise exposure to the residents below.

In 2014, the City began sending notices of violation after a discussion with a Flight Standards representative, wherein the City was assured that the section, since it was pre-ANCA, was enforceable. Mr. Gates raised questions with the enforcement thereafter, and since that time, we have made several attempts to set up a meeting with FAA legal to confirm the status of this portion of our program, which we have had on hold, pending confirmation. Noise Abatement

14

staff have continued to send out informational notices under a "Fly Friendly" program, but have not labeled them as "notices of violation" or pursued any enforcement. Secondly, staff does not send a notice if they have confirmed that the turn was directed by the Tower and not simply requested by the pilot.

Although staff is not currently pursuing enforcement, we would appreciate feedback as to whether our pre-ANCA status does indeed allow enforcement of this code section, so that we may proceed appropriately when the Noise Abatement program returns to the Torrance Airport Commission and City Council for discussion.

Thank you for your guidance.

FAA Letter of February 18, 2020

Federal Aviation Administration

FEB 18 2020

Mr. Jim Gates
Torrance Airport Association
2785 Pacific Coast Highway E164
Torrance, CA 90505

Dear Mr. Gates:

Thank you for your letters in which you informed the Federal Aviation Administration (FAA) of your receipt of an "Early Left Turn Violation" from the Community Development Department, City of Torrance. You request the FAA to contact the Torrance City Attorney to "clarify in writing the FAA's exclusive authority" by quoting a statement on the FAA website.

You assert that the City's enforcement of the ordinance requires pilots to make a choice in terms of which directive to comply with: either the Torrance Municipal Code or FAA Air Traffic Control (ATC) instructions. You provided copies of two "Early Left Turn Violation" notices that the City issued in 2019 to pilots. Both notices state that "[w]hile the FAA control tower may have authorized the above noted procedure it is a violation of the Torrance Municipal Code." Both notices state that "future violations are subject to enforcement." You requested the FAA "immediately clarify in writing the FAA's exclusive authority to the Torrance City Attorney." While the FAA declines to send unsolicited correspondence to the Torrance City Attorney, this letter responds to the inquiries you submitted. Our understanding is that the City is yet to bring any enforcement action related to the code provision.

Congress has long vested the FAA with authority to regulate the areas of airspace use, management and efficiency; air traffic control; safety; navigational facilities; and aircraft noise at its source. 49 U.S.C. §§ 40103, 44502, and 44701-44738. In addition, a citizen of the United States has a statutory public right of transit through the navigable airspace. 49 U.S.C. § 40103(a)(2). Courts have held that Congress has exclusively occupied the field of aviation safety and airspace efficiency such that Federal law preempts state requirements that fall within this field. See City of Burbank v. Lockheed Air Terminal, 411 U.S. 624 (1973); American Airlines v. Town of Hempstead, 398 F.2d 369 (2d Cir. 1968), cert. denied, 393 U.S. 1017 (1969). In United States v. City of Blue Ash, 487 F. Supp. 135, aff'd, 621 F.2d 227 (6th Cir. 1980), the court upheld preemption of a local ordinance requiring departing planes to make "Noise Abatement Turns"). See Blue Sky Entertainment, Inc. v. Town of Gardiner, 711 F. Supp. 678, 692 (N.D.N.Y. 1989) ("[i]n fact, federal law in the area of aviation is so pervasive that it preempts a municipal ordinance which attempts to govern the flight paths of aircraft using an airport which has no control tower, is not served by a certified carrier and has no regularly scheduled flights," citing Blue Ash).

State and local governments may protect their citizens through land use controls and other police power measures that do not regulate airspace management or aircraft operations. But that power does not extend to many aspects of aircraft operations, including route, altitude, time of operation, and frequency. See Friends of the E. Hampton Airport, Inc. v. Town of E. Hampton, 841 F.3d 133 (2d Cir. 2016); National Helicopter Corp. v. City of New York, 137 F.3d 81 (2d Cir. 1998).

In addition, State or local governments that own or operate an airport are not prohibited from carrying out their proprietary powers and rights. Accordingly, the airport owner or operator has authority to promulgate reasonable, nonarbitrary, and non-discriminatory regulations addressing aircraft noise and appropriate local interests. *Friends of E. Hampton*, 841 F.3d at 139. Any such restriction would need to comply with the Airport Noise and Capacity Act (ANCA), 49 U.S.C. § 47521 et seq., and 14 C.F.R. Part 161, which outline the process, analysis, and approvals required for imposing a noise or access restriction at an airport.

Section 51.2.3(e) of the Torrance Municipal Code, "Take Offs and Landings," states, "Aircraft taking off to the west shall not turn left until they have either reached the ocean or attained an altitude of fifteen hundred (1,500) feet." Because the Torrance code provision applies to aircraft in flight, it is not consistent with the Federal statutory and regulatory framework described above. Enforcement of the provision would be at odds with various court opinions. As noted, state and local governments lack the authority to regulate airspace use, management and efficiency; air traffic control; and aircraft noise at its source. Federal courts have found that a navigable airspace free from inconsistent state and local restrictions is essential to the maintenance of a safe and sound air transportation system. See Montalvo v. Spirit Airlines, 508 F.3d 464 (9th Cir. 2007), and French v. Pan Am Express, Inc., 869 F.2d 1 (1st Cir. 1989).

The "Early Left Turn Violation" letters refer to "a noise sensitive area" and noise abatement procedures. The FAA's ATC Tower at Torrance is aware of such procedures. FAA air traffic controllers generally comply with noise abatement procedures to the extent practicable with exceptions for safety, weather, airspace efficiency, and traffic pattern considerations. The pilot in command is responsible for the safe operation of the aircraft and should advise air traffic control if he or she is unable to comply with any air traffic advisory or instruction.

Thank you for the opportunity to review and respond to your concerns. This letter has been coordinated with the General Counsel's Office (C-60), Office of the Secretary of Transportation.

Sincerely,

Lorelei A. Peter

Assistant Chief Counsel Regulations Division

CITY OF TORRANCE COMMUNITY DEVELOPMENT DEPARTMENT

DANNY E. SANTANA ASSISTANT CITY MANAGER

U.S. Department of Transportation Federal Aviation Administration Office of the Chief Counsel 800 Independence Ave., S.W. Washington, D.C. 20591 August 16, 2021

Attn: Lorelei A. Peter, Assistant Chief Counsel, Regulations Division

Dear Ms. Peter:

The City of Torrance previously contacted your office on November 20, 2020, seeking clarification of the status of Section 51.2.3(e) of the Torrance Municipal Code that states, "Aircraft taking off to the west shall not turn left until they have either reached the ocean or attained an altitude of fifteen hundred (1,500) feet." Because our Noise Ordinance is pre-ANCA, our understanding has always been that the ordinance was grandfathered and therefore enforceable. We have attached our previous correspondence, which includes greater detail regarding the Torrance Airport Noise Ordinance, and the rationale behind the section in question.

At this time we are again requesting guidance from the FAA as to whether or not our understanding of the pre-ANCA status of the Torrance Airport Noise ordinance is correct and enforceable. The City is in the process of soliciting for a new noise monitoring system, and it is vital that we have guidance regarding this point as soon as possible in order to complete the design of a new system.

Thank you for your guidance.

Sincerely,

Linda Cessna

Deputy Community Director

Cc: Patrick Sullivan, City Attorney Congressman Ted Lieu

Torrance, CA 90503

RE: City of Torrance's Regulation of Aircraft in Flight

Dear Mr. Sullivan:

We write to memorialize the outcome of your meeting of March 3, 2022, with several FAA attorneys regarding Division 5, Chapter 1, Article 2, Section 51.2.3 of the City of Torrance's Municipal Code, "Take Offs and Landings," which prohibits aircraft from taking off to the west from "turn[ing] left until they have either reached the ocean or attained an altitude of fifteen hundred (1,500) feet."

In a February 18, 2020, letter from Lorelei Peter, Assistant Chief Counsel for Regulations, to Mr. Jim Gates, a local pilot, Ms. Peter addressed the enforceability of Section 51.2.3(e). Ms. Peter's letter stated that because the municipal code "applies to aircraft in flight, it is not consistent with the [applicable] Federal statutory and regulatory framework." As explained in the letter, this determination is based upon the Federal Aviation Administration's (FAA) authority to regulate airspace use, management and efficiency; air traffic control; safety; navigational facilities; and aircraft noise at its source. As provided in the letter to Mr. Gates, enforcement of Section 51.2.3(e) would be at odds with various court opinions.

We are grateful to you for conveying our determination to Torrance's Airport Commission at its meeting of April 22, 2022.

If you have any additional questions or need anything further, please let me know.

Sincerely,

SARA L

My name is Rick and I live in Torrance.

Our neighborhoods are hughly impacted by the excessive training at the Torrance Airport.

The City needs to step up and enforce it's own Municipal Code section 51.2.3e.

Currently, aircrafts from outside areas are encouraged to come train at Torrance Airport by not having a landing fee.

Neighborhoods are impacted with constant

aircraft training circling low and loud again and again with repeated touch and go.

A landing fees needs to be implemented at the Torrance Airport.

Subject: RE: Repeal of TMC Sections

Good Morning Mr. Gates ~

I hope this email finds you well. Your below email was forwarded to me for review and response. Both the Community Development Department and General Services Department are responsible for enforcing different sections of TMC Division 5 "Airport". In regards to the specific sections listed below, the Community Development Department is responsible for enforcing Section 51.2.2 and 51.2.3, while the General Services Department is responsible for enforcing Section 51.2.19. While I understand that you would like certain sections of Division 5 "Airport" repealed, that direction would need to come from the City Council. You are always welcomed to make the request of the City Council by either sending them an email or participating in a City Council meeting and speaking under "Oral Communications". However, please be aware that staff will be bringing a Noise Abatement update to the Council in the near future that will cover a number of topics. This agenda item is tentatively scheduled for the November 8th City Council meeting. It may be more relevant to wait and make your request at the time this agenda item is presented to the City Council. Should you have any questions, please feel free to contact me.

MICHELLE G. RAMIREZ

Subject: Re: Repeal of TMC Sections

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

MS Poirier--Thank you.

The sections I am concerned about relate to the airport (TMC 51.2.2, 51.2.3, and 51.2.19). These TMC Sections improperly attempt to regulate aircraft in flight at Torrance Airport. As you know, the FAA has had exclusive authority over this area since it was formed in August 1958. I'm not sure whether General Services or Community Development is in charge, since parts of these sections are purported to be for "noise abatement."

On Mon, Oct 3, 2022 at 9:27 AM City Clerk <CityClerk@torranceca.gov> wrote:

Dear Mr. Gates,

It depends on the sections, the department or city attorney would submit an item and ordinance to the City Council to repeal the sections.

Mr Aram Chaparyan, City Manager City of Torrance 3031 Torrance Blvd Torrance, CA 90503

Subject: Suggested changes to Torrance Municipal Code (TMC)

Dear Mr Chaparyan:

I understand that your are considering an update to TMC. There is widespread misunderstanding about the laws that apply to aircraft and pilots at Torrance Airport. You can clear this up by recommending repeal of the invalid and unenforceable TMC Sections 51.2.2, 51.2.3 and 51.2.19 (Attachment 1).

Congress gave exclusive authority for the oversight and implementation of aviation laws and programs to the FAA under the Federal Aviation Act of 1958. This includes the areas of airspace use and management, air traffic control and aviation safety. Under the legal doctrine of federal preemption, which flows from the Supremacy Clause of the Constitution, state and local authorities do not generally have legal power to act in an area that already is subject to comprehensive federal regulation.

In 1978, the FAA sued to permanently enjoin an Ohio city from enforcing their municipal code (nearly identical to TMC 51.2.3e) which specified the flight path for departure from their airport and levied fines against violators (*United States vs City of Blue Ash*). The city of Blue Ash lost its appeal to the 6th Circuit in 1980.

The exclusive authority of the FAA to regulate aircraft in flight means that several sections of the Torrance Municipal Code (TMC) are invalid, unenforceable and preempted by Federal Law.

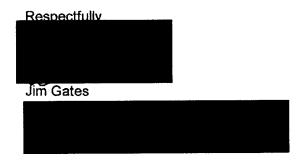

A petition is gathering signatures from area residents, demanding that the City Council resume enforcing parts of the TMC that are, as stated by the FAA Chief Counsel's Office (Attachment 2), invalid, unenforceable and preempted by Federal Laws. This petition reveals that the petitioners and those who have signed it have a profound misunderstanding about the laws that apply to aviation in the United States and at Torrance Airport.

The Community Development Department continues to send out letters (Attachment 3) asking compliance with invalid sections of the Torrance TMC—even if the pilot's action was authorized by the control tower. The letters also incorrectly imply that the Pilot in Command may not exercise her/his authority under 14 CFR 91.3 to deviate from a straight-out departure at Torrance Airport—even for safety reasons—"unless specifically directed to do otherwise by the FAA Control Tower." These letters reveal that the city staff has a profound misunderstanding about the laws that apply to aviation in the United States and at Torrance Airport.

Repealing these invalid sections of TMC will clear up this widespread misunderstanding and preclude any action by the FAA.

For more detail about the Constitution's Supremacy Clause, the Preemption Doctrine, the FAA's exclusive authority and how these relate to Torrance Airport, please go to:

http://www.torranceairport.org/facts/ and navigate to "The 'no left turn' myth"

ATTACHMENT 1

Suggested revisions to the Torrance Municipal Code

Entire sections 51.2.2, 51.2.3 and 51.2.19 regulate airspace management or aircraft operations, are preempted by Federal Law, and they should be repealed.

CHAPTER 1, DIVISION 5: AIRPORT

51.2.2 TRAFFIC AND TRAINING PATTERNS

- a) Except as otherwise herein provided, all aircraft, both fixed wing and rotary wing, arriving at or leaving the airport, before landing and after takeoff, shall be flown in accordance with the traffic patterns shown on those certain diagrams on file with the City Clerk and in the office of the Airport Manager, and which are made a part hereof. All rotary wing aircraft being flown for testing, training or certification shall be flown within the north training pattern shown in those certain diagrams on file in the office of the City Clerk and in the office of the Airport Manager, and which are made a part hereof.
- b) The traffic pattern flight altitude for fixed wing and rotary wing aircraft arriving and departing is eight hundred feet (800') and the training pattern flight altitude for rotary wing aircraft is five hundred feet (500').
- c) All rotary wing testing, training or certification flights shall be conducted within the north training pattern, as provided in paragraph (a) above, but nothing contained in this Section shall prohibit use of the south training pattern, as shown on those certain diagrams on file in the office of the City Clerk and the office of the Airport Manager, for arriving at or departing from the Airport, or in the event of an emergency, or when otherwise directed by the air traffic controller.

51.2.3 TAKE OFFS AND LANDINGS

- a) All cockpit and engine checks shall be made on the run-up ramp prior to taxiing into position for take-off.
- b) Before taxiing an aircraft into position on the runway for take off, the runway base legs and final approach legs shall be clear and, if the control tower is being operated, the pilot shall have received clearance from the control tower.
- c) All take offs and landings of aircraft shall be made on the runway only.
- d) All initial take offs of aircraft shall be made from the end of the runway.
- e) Aircraft taking off to the west shall not turn left until they have either reached the ocean or attained an altitude of fifteen hundred (1,500) feet.

- f) Touch and go landings shall be permitted only after the pilot of the aircraft has received approval from the air traffic controller in the control tower.
- g) Aircraft landing at the Airport shall make the landing runway available to others by leaving the line of traffic as promptly as possible.

51.2.19 RADIO EQUIPMENT

Except in emergency or by prior arrangement with the Airport Control Tower, all aircraft using the Airport shall be equipped with functioning two-way radio equipment tuned to the Torrance tower frequency and capable of transmitting and receiving intelligible traffic control instructions from the control tower for a distance of at least four (4) miles from the Airport. When the control tower is in operation, aircraft shall establish communication with the control tower prior to departing any parking or tie down area. Radio contact shall be maintained at all times while taxiing and during engine warm up prior to departure. Aircraft approaching the Airport shall establish radio communication with the control tower at least three (3) miles from the Airport.

During take offs and until outside of the three (3) mile control zone or until cleared to leave tower frequency, the pilots of all aircraft shall guard the control tower radio frequency.

Office of the Chief Counsel

800 Independence Ave., S.W. Washington, D.C. 20591

FEB 1 8 2020

Mr. Jim Gates
Torrance Airport Association
2785 Pacific Coast Highway E164
Torrance, CA 90505

Dear Mr. Gates:

Thank you for your letters in which you informed the Federal Aviation Administration (FAA) of your receipt of an "Early Left Turn Violation" from the Community Development Department, City of Torrance. You request the FAA to contact the Torrance City Attorney to "clarify in writing the FAA's exclusive authority" by quoting a statement on the FAA website.

You assert that the City's enforcement of the ordinance requires pilots to make a choice in terms of which directive to comply with: either the Torrance Municipal Code or FAA Air Traffic Control (ATC) instructions. You provided copies of two "Early Left Turn Violation" notices that the City issued in 2019 to pilots. Both notices state that "[w]hile the FAA control tower may have authorized the above noted procedure it is a violation of the Torrance Municipal Code." Both notices state that "future violations are subject to enforcement." You requested the FAA "immediately clarify in writing the FAA's exclusive authority to the Torrance City Attorney." While the FAA declines to send unsolicited correspondence to the Torrance City Attorney, this letter responds to the inquiries you submitted. Our understanding is that the City is yet to bring any enforcement action related to the code provision.

Congress has long vested the FAA with authority to regulate the areas of airspace use, management and efficiency; air traffic control; safety; navigational facilities; and aircraft noise at its source. 49 U.S.C. §§ 40103, 44502, and 44701-44738. In addition, a citizen of the United States has a statutory public right of transit through the navigable airspace. 49 U.S.C. § 40103(a)(2). Courts have held that Congress has exclusively occupied the field of aviation safety and airspace efficiency such that Federal law preempts state requirements that fall within this field. See City of Burbank v. Lockheed Air Terminal, 411 U.S. 624 (1973); American Atrlines v. Town of Hempstead, 398 F.2d 369 (2d Cir. 1968), cert. denied, 393 U.S. 1017 (1969). In United States v. City of Blue Ash, 487 F. Supp. 135, aff d, 621 F.2d 227 (6th Cir. 1980), the court upheld preemption of a local ordinance requiring departing planes to make "Noise Abatement Turns"). See Blue Sky Entertainment, Inc. v. Town of Gardiner, 711 F. Supp. 678, 692 (N.D.N.Y. 1989) ("[i]n fact, federal law in the area of aviation is so pervasive that it preempts a municipal ordinance which attempts to govern the flight paths of aircraft using an airport which has no control tower, is not served by a certified carrier and has no regularly scheduled flights," citing Blue Ash).

State and local governments may protect their citizens through land use controls and other police power measures that do not regulate airspace management or aircraft operations. But that power does not extend to many aspects of aircraft operations, including route, altitude, time of operation, and frequency. See Friends of the E. Hampton Airport, Inc. v. Town of E. Hampton, 841 F.3d 133 (2d Cir. 2016); National Helicopter Corp. v. City of New York, 137 F.3d 81 (2d Cir. 1998).

In addition, State or local governments that own or operate an airport are not prohibited from carrying out their proprietary powers and rights. Accordingly, the airport owner or operator has authority to promulgate reasonable, nonarbitrary, and non-discriminatory regulations addressing aircraft noise and appropriate local interests. Friends of E. Hampton, 841 F.3d at 139. Any such restriction would need to comply with the Airport Noise and Capacity Act (ANCA), 49 U.S.C. § 47521 et seq., and 14 C.F.R. Part 161, which outline the process, analysis, and approvals required for imposing a noise or access restriction at an airport.

Section 51.2.3(e) of the Torrance Municipal Code, "Take Offs and Landings," states, "Aircraft taking off to the west shall not turn left until they have either reached the ocean or attained an altitude of fifteen hundred (1,500) feet." Because the Torrance code provision applies to aircraft in flight, it is not consistent with the Federal statutory and regulatory framework described above. Enforcement of the provision would be at odds with various court opinions. As noted, state and local governments lack the authority to regulate airspace use, management and efficiency; air traffic control; and aircraft noise at its source. Federal courts have found that a navigable airspace free from inconsistent state and local restrictions is essential to the maintenance of a safe and sound air transportation system. See Montalvo v. Spirit Airlines, 508 F.3d 464 (9th Cir. 2007), and French v. Pan Am Express, Inc., 869 F.2d 1 (1st Cir. 1989).

The "Early Left Turn Violation" letters refer to "a noise sensitive area" and noise abatement procedures. The FAA's ATC Tower at Torrance is aware of such procedures. FAA air traffic controllers generally comply with noise abatement procedures to the extent practicable with exceptions for safety, weather, airspace efficiency, and traffic pattern considerations. The pilot in command is responsible for the safe operation of the aircraft and should advise air traffic control if he or she is unable to comply with any air traffic advisory or instruction.

Thank you for the opportunity to review and respond to your concerns. This letter has been coordinated with the General Counsel's Office (C-60), Office of the Secretary of Transportation.

Sincerely,

Lorelei A. Peter Assistant Chief Counsel Regulations Division

CITY OF

COMMUNITY DEVELOPMENT DEPARTMENT

September 7, 2022

MICHELLE G. RAMIREZ COMMUNITY DEVELOPMENT DIRECTOR

REDONDO BEACH, CA 90277

There are a number of noise abatement procedures in place at Torrance Airport designed to allow the airport to conduct its operations while addressing the noise concerns of the residents in the surrounding neighborhoods, including a right turn at Hawthorne Blvd. for VFR departures off runway 29R and straight out departures from either runway, with no left turn until either reaching the ocean or attaining an altitude of 1500 feet AGL. We have recently noticed an increase in the number of flights that are turning left prior to reaching the ocean or failing to attain an altitude of 1500 feet AGL. We are requesting that you abide by Torrance Municipal Code Section 51.2.3.e that states that a left turn should not be made when departing to the West until either reaching the ocean or attaining an altitude of 1500 feet AGC.

On September 7, 2022 at 11:45:00 hours, your aircraft, was recorded making an early left turn prior to reaching the ocean. Your aircraft was also noted as being below the recommended 1500 feet AGL. While the F.A.A. Control Tower may have authorized the request for the above noted procedure, we are requesting that you abide by the Torrance Municipal Code.

This letter is to notify you of the recommended noise abatement procedures and to request that you continue straight to the ocean or attain an altitude of 1500 feet AGL prior to turning left when departing Torrance Airport, unless specifically directed to do otherwise by the F.A.A. Control Tower.

Torrance Municipal Code Section 46.8.12 states that for pilot responsibility, the owner is presumed to be the pilot. Such presumption may be rebutted only if the owner identifies to Noise Abatement staff the person who was, in fact, the pilot. Therefore, if you owned or leased the aircraft but were not the pilot in command at the date and time of the event shown above, immediately upon receipt of this notice, forward to this office, the name and address of the pilot in command of the aircraft at the time of the above event, so that individual may be informed of the Noise Abatement Procedures.

Please contact the Noise Abatement Center at (310) 784-7950 in order to discuss any of the information above.

Sincerely.

Jana Dartois

Subject: Torrance airport noise

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Hello Mr. Griffiths,

I'm aware that Torrance Airport has recently updated Noise Abatement reporting capabilities for those who want to report noise or low-flying aircraft.

Recent articles in the Daily Breeze seem to imply that the pandemic, and the amount of time people spend at home, is directly related to the increase in noise complaints. That's probably true of some.

Since November of 2021, the noise of low-flying aircraft has increased over my Torrance neighborhood dramatically – well after the start of the pandemic.

I have called the Noise Abatement Hotline, been referred to the FAA and reached out to your office as well.

The change since Nov. seems to be a change in flight plan for the flight-training schools that use a take-off route over several neighborhoods. This means they are still gaining altitude when they fly over residential areas. From 9AM to 9PM the noise is so intense you cannot speak, work, hear your TV and the roof over my unit rumbles every 2-3 minutes on busy weekdays. Considering this was NOT the case prior, it seems that this flight path could be adjusted.

I am reaching out to you as the Airport and FAA reporting programs are clumsy and for over a year have had no effect.

Thank you,

Nell Crawford

October 12, 2022

SENT ELECTRONICALLY

Honorable Mayor Chen and City Council Members:

RE: UPCOMING COUNCIL AGENDA ITEM - UPDATE ON AIRPORT NOISE ABATEMENT

We are asking you to consider this input in connection with the staff report you have requested for an upcoming Council agenda.

Riviera Homeowners Association residents have been plagued in recent years by noise from low flying aircraft using Torrance Airport. In talking to residents from other HOA's we have found they are also impacted. Our Association has taken the lead in bringing residents together, asking the City for relief, and proposing ways to resolve these problems.

Attachment 1 is a petition signed by over 666 individuals who are petitioning the City to take action to reduce Torrance Airport's impacts. You can also find the petition online (at https://www.ipetitions.com/petition/petition-to-reduce-torrance-airport-impacts-now) with names of the signers and their comments. In addition, Attachment 2 is hard copies of the petition with 124 additional supporters. Altogether, there are 790 supporters, so far.

We believe the City should hire independent outside legal counsel with expertise in aviation law to help the City identify and evaluate its legal options.

Voluntary measures have proven to be ineffective. Moreover, we need comprehensive, not piecemeal solutions. We have identified several options discussed below and we urge you to consider all of them. We have grouped them into two categories – Options to Address Training Impacts, and Options to Reduce General Impacts.

Options to Address Training Impacts

Repetitive training flights have greatly increased negative impacts on residents on all sides of the airport. The number of operations has increased rapidly. The airport is on pace to reach 180,000 operations by the end of this calendar year and 60% (over 109,000) of them will be for training in and around the airport itself. Below are a range of options to help mitigate the impacts. The City should consider adopting one or more of these options to address the problem.

1. Reduce numbers of training operations

There are several options that could be considered. For example, limiting the number of flight schools that can be based at the airport; requiring flight schools to comply with the City's recommended noise abatement practices as a condition of their lease; and limiting the number of training flights by each flight school. As with other options, the City should ask counsel if these options are legally permissible.

2. Landing fees

Currently, the airport charges no landing fees. Non-Torrance-based aircraft are allowed to use the airport free of charge. They are, in effect, being subsidized by airport leaseholders who rent hangars, tie downs, and other airport property. In October, 2020, City staff estimated that landing fees could produce a net gain of \$257,000 to \$642,000 annually. These funds could help defray airport costs, including legal fees, if necessary. Funds not needed by the airport could be transferred to the City's General Fund, as is the current practice. Landing fees would spread the cost of the airport more fairly among all users. They might also have the added benefit of discouraging touch-and-go type training, especially aircraft that come from other airports to train in Torrance. The City should consider this option. This might need legal analysis before implementation.

3. Enforce no-left-turn rule for training operations

The City's Code states, when taking off to the west, no left turn until reaching the ocean or an altitude of 1500 feet. At one time, the City's Noise Abatement brochure stated that the no-left-turn rule applied to training operations. Recently, staff has stated that the rule does not apply to training. There has been no explanation as to why the staff changed its interpretation of the rule. If the City resumes enforcement of its no-left-turn rule for departures (discussed below), it should also apply the rule to aircraft taking off to train in the south pattern. This would greatly reduce the number of training operations in the south pattern.

4. Immediately improve operations in the north pattern

At one time, the City's noise abatement program recommended that pilots training in the north pattern stay as close to the airport as possible, over commercial/industrial areas along Lomita Blvd, and not over residential areas such as New Horizons and Marble Estates. However, more recently that provision has been overlooked and now there are large numbers of flights that do not follow that practice. This provision should be reinstated and required, if possible, or at least strongly recommended. As a recommendation, this practice could be reinstated immediately without the need for legal analysis.

5. Close south runway

The City owns the airport. We are not proposing it, but the City has the authority to close the airport. If training operations cannot be controlled any other way, the City should consider closing the south runway. With only one runway, fewer training operations could be accommodated, thereby reducing the number of training flights. The City's legal authority to close the south runway should be confirmed by outside counsel.

Options to Reduce General Impacts

1. Resume enforcing no-left-turn law

The City's no-left-turn law was adopted to protect residents on higher ground south of the airport. Letters from the FAA express their opinion that the City does not have legal authority to enforce its law. However, the FAA's letters do not constitute a "ruling" or "final determination." They are not binding on the City. Moreover, the FAA has historically taken the side of the aviation industry rather than the general public. For two years the FAA failed to respond to the City's requests for clarification. They finally responded with a half-page letter that only referred to their previous letter. Furthermore, they completely ignored the fact that the City's laws are "grandfathered" in place. Finally, the FAA states the City cannot control aircraft "in flight." However, pilots often make the decision to turn left (knowing they will violate the City's rule) while still on the ground, before they ever take off. The City is not directing aircraft "while in flight." Therefore, we do not accept the FAA's opinion. We respectfully request that the City seek a thorough written opinion from qualified independent outside legal counsel. And, if there is a reasonable chance the City's law can prevail against a legal challenge, the City should resume enforcing this provision.

2. Contract out operation of the control tower

The FAA control tower provides virtually no assistance with conformance to the City's noise abatement rules. Their primary mission is safely sequencing flight operations. Some operations, such as training in the south pattern, could be effectively controlled if the tower cooperated. The tower could simply not approve pilot requests to train in the south pattern. We believe the City has the right to choose non-FAA controllers. If the City contracted for tower operations, the contractor might be more receptive to assisting the City with compliance to noise abatement rules. Outside counsel should be asked to evaluate and report on the City's ability to contract for non-FAA tower services.

3. Follow TMC Section 51.7.3 - Ban violation-prone aircraft

Torrance does not follow its Municipal Code Section 51.7.3. This Section states that aircraft that exceed the noise limit three times in a three-year period shall be presumed to be violation-prone and will be banned from the airport for three years. Violations are appealable to the Airport Manager. Instead of following this procedure, staff has been using Hearing Boards which were intended to determine the "guilt or innocence" of "persons" not "aircraft." Hearing Boards are cumbersome, time-consuming, and ineffective. The City should immediately start enforcing aircraft noise violations as prescribed in Code Section 51.7.3.

4. Use monetary fines

Torrance Airport and Santa Monica Airport have similar noise limits and both use monitors to detect violations. Both have laws that are grandfathered under federal law. However, the enforcement is different. Torrance uses hearing boards with no monetary fines. Santa Monica uses progressive monetary fines ranging from \$2,000 for a second offense to \$10,000 for a fourth offense, followed by suspension or revocation of privileges or permits. A comparison will show that Santa Monica has a much lower violation rate than Torrance (even though Santa Monica has more jet operations than Torrance). For example, in 2018, Torrance's violation rate was four times higher than that of Santa Monica. Santa Monica's enforcement is more effective and Torrance should consider using a similar approach. The City should adopt progressive

monetary fines starting with the second violation (after first issuing a written warning). Furthermore, fines would be a source of revenue for the airport as opposed to hearing boards which are a drag on City resources. Outside legal counsel should be asked to analyze and report on the City's legal authority to change its enforcement method to monetary fines (without undergoing the FAA's costly approval process with little chance of receiving FAA approval).

5. Close gaps between noise monitors

The City's Code limits aircraft noise (above 82 dB maximum or 88 dB SENEL) <u>anywhere</u> outside the airport boundaries, In other words, it applies throughout all residential areas. But the City only has seven noise monitors and they are spread out around the airport with gaps of about one-half mile between monitors. Large numbers of aircraft fly through the gaps, sometimes as much as a quarter mile from the nearest monitor. The noise on the ground directly below an aircraft could be up to 6-7 dB higher than the reading on the noise monitor one-quarter mile away. So, the City's system misses large numbers of violations which are not picked up by any of the monitors. To detect more violations, the City needs to place monitors in the gaps, especially at the ends of the runways where aircraft are often loudest and noise is most concentrated. The City would not necessarily have to buy additional monitors. It could relocate some of its existing underutilized monitors.

6. Close the public airport and reopen as a private airport

Recently, the Town of East Hampton, NY, was advised by its outside legal counsel they could close their public airport for three days and reopen as a new private airport with authority to enact restrictions. (See Attachment 3.) This option would restore the City's ability to control local noise. For example, under this option, the City could restrict training operations. The City should ask its outside legal counsel for advice on the City's ability to pursue this option.

7. Ban the sale of leaded fuel

Many of the aircraft that use the airport still use leaded fuel. Decades ago, lead was determined to have negative health impacts, especially among children. Leaded automobile gas was outlawed. Leaded paint has been outlawed. Yet, aircraft are still allowed to use leaded fuel. The FAA and EPA recognize lead has health impacts, yet they refuse to take action. The FAA's current "goal" is to eliminate lead from aviation gas by 2030. Their failure to take more aggressive action is unacceptable. Meanwhile, aircraft continue to dump lead on our homes, schools, churches, parks and everywhere else. Last year, a study commissioned by County of Santa Clara found increased lead levels in children living near Reid-Hillview Airport. (See Attachment 4.) Last year, the County of Santa Clara acted to ban the sale of leaded fuel at its airports, effective January 1, 2022. On September 17, 2022, the Daily Breeze reported that EPA data shows Torrance Airport is one of the top 100 lead-polluting airports out of 20,000 airports nationwide. Instead of waiting for others to act, the City should ban the sale of leaded fuel, effective as soon as feasible.

8. Legal costs

Residents want the City to fight, if necessary, to restore and retain our health, safety, and quality of life. To do so, the City may incur legal costs. There is also the possibility that City measures may bring legal action from pilot groups. As with other airport expenses, the City's airport related legal costs should be paid from the Airport Fund and not the City's General Fund. The FAA, in a final Agency Decision and Order in 2020, ruled that even an airport that has received

federal grants can use them for airport related legal costs. (See Attachment 5.) Torrance has no federal grant obligations so there should be little doubt it can do so as well. Outside legal counsel should be asked to confirm this use of funds. New revenue sources, such as landing fees and monetary fines should help offset any legal expenses the airport may incur.

We urge you to take a comprehensive approach to resolving airport impacts and adopt the best combination of legally available options.

Respectfully,

Judy Brunetti Co-President, Riviera Homeowners Association

Richard Root, Riviera Resident

To: Mayor and City Council of Torrance

Whereas a large increase in training operations from the airport has brought noise to levels now intolerable for many residents;

Whereas residents are also concerned about air pollution from aircraft using leaded fuel and safety of low training flights over densely populated neighborhoods;

Whereas these problems are also hurting residential property values;

Whereas the City owns the airport but, due to a change in federal law, the City no longer has the authority to adopt new airport noise abatement laws;

Whereas, based only on a verbal opinion from the FAA, City staff stopped enforcing its longstanding, grandfathered early-left-turn law which sanctions pilots who take off and turn left over residential neighborhoods on higher ground south of the airport;

Whereas the City's noise monitors will not resolve negative impacts from training operations;

Whereas voluntary noise abatement recommendations have failed to achieve compliance;

Whereas the City does not have staff with expertise needed to identify and evaluate all of the City's remaining legal options.

- Hire outside counsel with expertise in aviation law to identify and evaluate options that may still be available to reduce the airport's environmental impacts (e.g., charge landing fees, close south runway, resume enforcing early-left-turn law, prohibit sale of leaded fuel, etc.) and to defend the City against any legal challenges;
- 2. Pay the City's legal expenses from the City's Airport Fund, not from general taxpayers; and
- 3. Hold public hearings to discuss and consider all legally available options.

To: Mayor and City Council of Torrance

Whereas a large increase in training operations from the airport has brought noise to levels now intolerable for many residents;

Whereas residents are also concerned about air pollution from aircraft using leaded fuel and safety of low training flights over densely populated neighborhoods;

Whereas these problems are also hurting residential property values;

Whereas the City owns the airport but, due to a change in federal law, the City no longer has the authority to adopt new airport noise abatement laws;

Whereas, based only on a verbal opinion from the FAA, City staff stopped enforcing its longstanding, grandfathered early-left-turn law which sanctions pilots who take off and turn left over residential neighborhoods on higher ground south of the airport;

Whereas the City's noise monitors will not resolve negative impacts from training operations;

Whereas voluntary noise abatement recommendations have failed to achieve compliance;

Whereas the City does not have staff with expertise needed to identify and evaluate all of the City's remaining legal options.

- 1. Hire outside counsel with expertise in aviation law to identify and evaluate options that may still be available to reduce the airport's environmental impacts (e.g., charge landing fees, close south runway, resume enforcing early-left-turn law, prohibit sale of leaded fuel, etc.) and to defend the City against any legal challenges;
- 2. Pay the City's legal expenses from the City's Airport Fund, not from general taxpayers; and
- 3. Hold public hearings to discuss and consider all legally available options.

To: Mayor and City Council of Torrance

Whereas a large increase in training operations from the airport has brought noise to levels now intolerable for many residents;

Whereas residents are also concerned about air pollution from aircraft using leaded fuel and safety of low training flights over densely populated neighborhoods;

Whereas these problems are also hurting residential property values;

Whereas the City owns the airport but, due to a change in federal law, the City no longer has the authority to adopt new airport noise abatement laws;

Whereas, based only on a verbal opinion from the FAA, City staff stopped enforcing its longstanding, grandfathered early-left-turn law which sanctions pilots who take off and turn left over residential neighborhoods on higher ground south of the airport;

Whereas the City's noise monitors will not resolve negative impacts from training operations;

Whereas voluntary noise abatement recommendations have failed to achieve compliance;

Whereas the City does not have staff with expertise needed to identify and evaluate all of the City's remaining legal options.

- Hire outside counsel with expertise in aviation law to identify and evaluate options that may still be available to reduce the airport's environmental impacts (e.g., charge landing fees, close south runway, resume enforcing early-left-turn law, prohibit sale of leaded fuel, etc.) and to defend the City against any legal challenges;
- 2. Pay the City's legal expenses from the City's Airport Fund, not from general taxpayers; and
- 3. Hold public hearings to discuss and consider all legally available options.

TOWN OF EAST HAMPTON

159 Pantigo Road East Hampton, New York 11937

PETER VAN SCOYOC Supervisor (631) 324-4140 pvanscoyoc@ehamptonny.gov

January 18, 2022

FOR IMMEDIATE RELEASE

EAST HAMPTON TOWN TAKES ACTION TO ADDRESS AIRPORT TRAFFIC, NOISE, SAFETY, ENVIRONMENTAL CONCERNS

Town will deactivate East Hampton Airport, open new publicly owned private-use facility to operate under "prior permission required" framework

Move will provide town with maximum flexibility to enact use restrictions; retains right to close new airport completely if limits don't provide needed community relief

The East Hampton Town Board will take full advantage of the opportunity to make significant changes at the East Hampton Airport in order to rein in use of the airport by an increasing number of helicopters, jets, and other aircraft that have had an intensifying community impact, prompting thousands of complaints about noise and other concerns.

With a resolution at its Thursday, Jan. 20, meeting, the board is expected to agree to "deactivate" East Hampton Airport. Then, in early March, the board is expected to open a new, publicly owned private-use airport at the site of the former East Hampton Airport under a "Prior Permission Required" framework. The PPR framework will allow the implementation and enforcement of use restrictions to limit airport traffic and noise, while also addressing safety, environmental, and other concerns.

The parameters of the "Prior Permission Required," or PPR, program would be developed, presented to the public for discussion and comment, and set in place before the start of the summer season in May.

Limits can include defining aircraft operations for which permission will not be granted and authorizing airport use rights for certain users, such as establishing restrictions based on time of day, type of aircraft, noise level, type of operation (ie, commercial or private), and on environmental factors, such as the use of leaded aviation fuel, or electric aircraft.

After consideration of five possible legal courses of action, identified through analysis and in discussions with the Federal Aviation Administration — which outlined several of the options in a November 2020, letter to the Town — the Town Board after consultation with aviation

attorney, Cooley LLC, and the community has recommended the closure of the East Hampton Airport and opening of a new private use airport.

Closing the airport and opening a new private facility will provide the town with "maximum flexibility," according to the attorneys, who made a presentation at a town board work session today, and as noted by the FAA in the November 2020 letter, this process will extinguish legal obligations that could restrict future airport regulation.

"Obtaining maximum local control will provide the Town with flexibility to implement and adjust restrictions consistent with the community's evolving needs," they said in their recommendation. Under the PPR system, prior permission from the Town would be needed in order that an airport user could "have full operational use of a runway, taxiway, apron, or airport facility/service," according to an F.A.A. definition.

The Town could grant, withdraw, or revise permissions as needed, and would retain the ability to permanently close the new airport if the PPR restrictions do not meet community needs. The impact of the operational restrictions would be tracked and assessed during the upcoming season as part of an environmental impact statement under the New York State Environmental Quality Review Act (SEQRA).

The time between the closure of the East Hampton Airport and opening of a new private use facility could be designed for minimum disruption, the Cooley attorneys said. According to a recommended timeline, following the submission of required notice to the F.A.A., the airport closure would be scheduled for Feb. 28, 2022, with the new, private-use airport slated to open on March 4. This timing was discussed with F.A.A. officials as recently as January 6, 2022, during which time it was confirmed that the F.A.A. does not have a "defined period of closure" that would apply to opening of the new private use airport.

Other options regarding the airport's future that were examined but not recommended included negotiating an agreement with aircraft operators for mandatory restrictions, pursuant to the F.A.A.'s "Part 161" procedure; permanent closure; transitioning to a private airport without a closure and reopening, and maintaining the status quo.

The majority of the public has indicated that allowing the airport to continue operating as it has been is unacceptable, and that traffic volume, noise, environmental, and safety concerns must be addressed.

East Hampton Town gained the ability to adopt airport use restrictions, transition to a private airport, or even to close the airport altogether, with the Sept. 25, 2021, expiration of grant assurances, or agreements with the F.A.A.

A previous attempt by the Town prior to the expiration of the grant assurances, to institute a curfew and other use restrictions, was overturned by the court.

The decision to close the East Hampton Airport and open the new private use airport as a publicly owned private facility comes at the end of a year-long public engagement process

designed to gather and disseminate information to the public; share essential facts related to conditions at the airport; facilitate discussion and consensus building on future plans for the airport, and to solicit and compile public input and alternatives for board consideration and review.

In addition to public comment on the airport, submitted in writing and at town board meetings throughout the year, in 2021 the town board held eight board work sessions with professional consultants on the airport; conducted four public listening workshops, which drew more than 300 participants; held one-on-one meetings with stakeholders and interest groups, and, during the 2021 summer season, conducted an airport user survey.

The board also commissioned and reviewed a number of in-depth studies and analyses by professional consultants, including:

- A noise and operations report; feasibility study; and curfew and commercial operation analyses prepared by Harris, Miller, Miller and Hansen;
 - An economic study and a passenger survey, prepared by HR&A;
 - Environmental study by Dr. Don Wuebbles
 - —A zoning and planning review and a report on the community engagement sessions and public comment, by Dodson & Flinker and Fine Arts and Sciences.

All Airport studies, documents, and presentations are posted on the town website at EHamptonny.gov.

The town board's consultations with its aviation attorneys, and discussions with F.A.A. officials to chart a feasible course of action have been ongoing.

The process has suggested, according to the resolution slated to be offered at Thursday's town board meeting, that "a balance can be struck between aviation stakeholders and the community such that implementing restrictions or other limitations on operations can address much of the community's concern without foreclosing the ability of certain operators to continue operating out of the new [private use] airport."

The resolution expected on Thursday declares the closure of the East Hampton Airport and opening of the new private use airport to pose no significant adverse environmental impact under SEQRA. However, the long-term operational changes and restrictions in the PPR regulations that will be considered will be subject to SEQRA review with opportunity for public input before becoming final.

Study Commissioned by County of Santa Clara Finds Increased Lead Levels in Children Living Near Reid-Hillview Airport

August 4, 2021 at 12:00 PM

Comprehensive and controlled study reviewed 10 years of data; findings include that blood lead level increases in children downwind from the site are similar to those seen in the Flint, Michigan, Water Crisis

SANTA CLARA COUNTY, CALIF.— A study commissioned by the County of Santa Clara on lead exposure risks for children living in the area around Reid-Hillview Airport in East San José found that the continued use of leaded aviation fuel has contributed to increased blood lead levels, particularly for those within a half-mile of the facility.

The peer-reviewed study found that children living downwind from the airport had higher blood lead levels, with increases of .40 micrograms per deciliter, over children living upwind from the airport. For context, lead levels detected during the peak of the Flint Water Crisis were between .35 and .45 micrograms per deciliter over baseline.

The study also examined levels during times of maximum exposure to air traffic for children within a half-mile of the airport and estimated an increase of .83 micrograms per deciliter at peak times – significantly higher than the levels seen in Flint.

Children who live within a half-mile of the airport had blood lead levels 20% higher than children living between half-mile to 1.5 miles from the airport. The study also correlated blood lead levels with the proximity of a child's home and school to Reid-Hillview Airport. Children who commute toward Reid-Hillview to attend school present substantially higher blood lead levels than children who commute away from the airport.

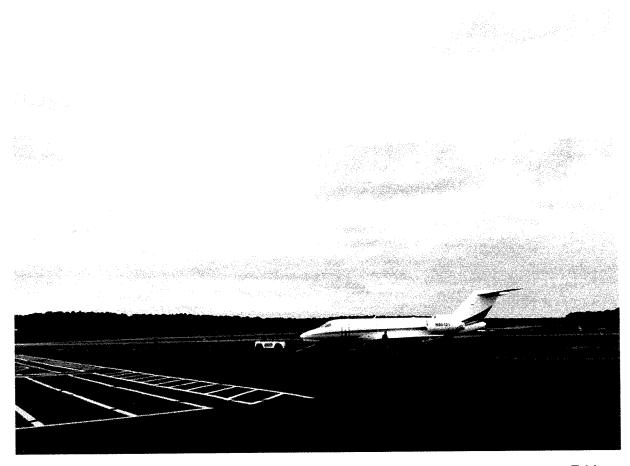

Health organizations agree that there is no known safe level of lead in a child's blood, and exposure to even a small amount of lead has a negative effect on cognitive ability, particularly in developing children who absorb lead more efficiently than older children and adults.

The study was conducted by Dr. Sammy Zahran and the Mountain Data Group. It incorporated three main tests of exposure risk and was controlled for other sources of lead exposure.

The <u>study</u> is available online. The County will hold <u>two Zoom community</u> <u>meetings</u> next week – one for neighborhoods surrounding Reid-Hillview, a second for South County residents near San Martin Airport – to present the findings of the study and receive questions.

Feds Back Town in Airport Lawsuit

A NetJets aircraft before being readied for departure at East Hampton Airport on Friday morning.

David E. Rattray

By Christopher Walsh

August 6, 2020

The Federal Aviation Administration has found that the Town of East Hampton complied with federal regulations in connection with its use of airport revenue, in responding to lawsuits challenging restrictions on operations at East Hampton Airport.

In a final report issued on July 23, the F.A.A. said the town "is permitted to use airport revenue to pay for legal fees when such fees are incurred in connection with airport-related litigation." The town issued a statement reporting the finding on Monday.

Eleven aviation industry groups and users of the airport filed a complaint with the F.A.A. in 2016 claiming that the town had violated federal law in allocating airport revenue to legal services. The agency issued a determination in favor of the town in 2018, but the plaintiffs appealed it. The final order affirms the 2018 determination.

The town board passed laws limiting use of aircraft deemed noisy by the FA.A. in 2015, limiting "noisy" aircraft to one takeoff and landing per week during the summer season, and prohibiting all takeoffs and landings from 11 p.m. to 7 a.m. That prohibition was extended for "noisy" aircraft to between 8 p.m. and 9 a.m.

The federal Court of Appeals, Second Circuit, barred the first provision after a group of aviation interests called Friends of East Hampton Airport sued, but the curfews were allowed to stand and took effect in July 2015.

In November 2016, however, a federal appeals court both affirmed the lower court's decision barring the once-per-week restriction and struck down the laws pertaining to curfews, stating that the town could not on its own enact use restrictions, but had to follow the federal Airport Noise and Capacity Act and seek federal approval.

The agency's July 23 final order closely follows a consultant's report to the town board showing both an 8-percent increase in airport operations between late June and Sept. 30 last year over the same period in 2018, and a broader trend of increasing operations between 2015 and 2019. In that report, presented on July 14, Adam Scholten, a senior consultant with HMMH, told the board that overall activity had increased by 23 percent between the summers of 2015 and 2019, with helicopter activity up 56 percent and seaplane activity up by 40 percent.

Residents both here and elsewhere, on both the North and South Forks and from as far away as Queens, have long complained about ceaseless traffic to and from the airport in the summer, and its detrimental impact on their quality of life. A caller to the board's July 14 meeting who identified himself as a resident of the Astoria neighborhood in Queens asked that the airport be closed. "The helicopters fly very low over us," he said, echoing many East End residents.

In response to the increasing traffic and use of noisy aircraft, board members have said that closing the airport is a possibility, once grant assurances — obligations on the part of the town to operate the airport under particular F.A.A. guidelines — expire. That is scheduled to happen next year.

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Mayor and Councilmembers,

Please step up quickly and respond to the petition from community members regarding the noise issues emanating from our airport.

In addition:

- 1 Enforce the Torrance Municipal Code TMC 52.7.3
- 2 Switch from admonitions/hand slapping to fines similar to what the airport in Santa Monica does
- 3 Councilman Mattucci would be wise to rescind his request for Staff to prepare an ordinance regarding the flight schools at the airport; it appears to be a waste of staff time given that the item is already scheduled.
- 4 Mayor Chen and Councilman Matttucci need to step back from this issue as their previous decisions got us into this problematic situation that has generated legitimate grievances from the community. (Reference September 2020 when Mattucci motioned not to renew the noise monitoring system and Chen seconded the motion. Furey and Griffiths voted against doing that until a proper noise-monitoring system was in place.) Pilots were no longer held responsible. Finally on August 15th Casper system came into place what a needless hardship for 2 years.
- 5 It was a good idea promoted by Councilman Griffiths to select Airport Commissioners who are not pilots so they can truly represent the community common sense it appears evident.

Sincerely, Marla Shwarts 49 year Torrance resident

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Dear Council member Mattucci and directors:

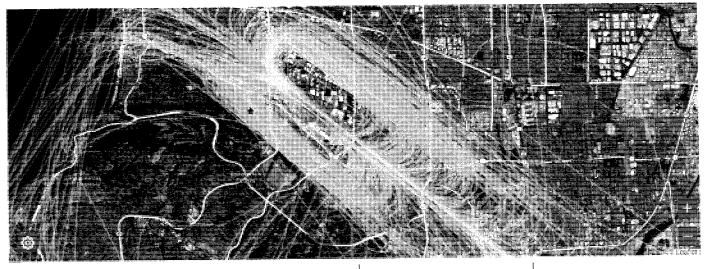

Yesterday, 10/18/22, the incessant noise pollution from the endless training loops taking place on both the north and south patterns of TOA was one of the worst days I can recall—and yet there are many days like this. Trying to work from a home office as many of us do I was not able to open any doors or windows on such a nice day and still had to wear noise-cancelling headphones IN MY OWN HOME just to focus on work. Even then I could still hear and feel planes clearly as they passed over every 2 or 3 minutes and many just a few hundred feet above the house at full throttle (we are represented by the red star). But we am not the only ones. There are hundreds if not thousands of homes under and around those loops and you can rest assured the anger is ever growing and this problem will not go away unless YOU do something.

It seems to be your official policy as a group to flatly ignore private complaints such as this, but I want to make sure you know exactly what type of traffic the city is now allowing. This is nothing short of abusive, and if there were ever an example of the needs of the VERY VERY FEW STRONGLY AND DECISIVELY OUTWEIGHING THE NEEDS OF THE VERY MANY this is clearly it. Please see the photos below of the traffic. The yellow is "local" training loops and the other colors are all traffic and contains some loops as well. Another issue: I know the pilots fought heavily (and won) against landing fees, but who is paying for all this wear and tear on the runways? Us? The taxpayers? Including the ones who are being made miserable and being assaulted in our own homes? I truly hope that in spite of your silence you are taking these complaints seriously and are planning some remedy—and soon—for this completely unfair and unlivable situation.

Sincerely,

Jason and Hitomi Mills Torrance Riviera since the 90's

Thank you for your reply Ms. Ramirez. With all due respect, this is all too little too late.

Doing something next month is too late. Doing something next year is too late.

Doing something about additional flight schools is too late and does nothing to address the existing flight schools and the hundreds of flights currently taking place daily.

My neighborhood sounds like Pearl Harbor from 8AM until 8PM and it doesn't seem like anyone is doing anything to stop it. That is a shame.

20221027_172729 (1).mp4

I wanted to provide some documentation on what is currently happening to residents near the airport and the result of the ballooning flight schools.

The attached video is the 5th pass by this specific aircraft belonging to South Coast Aeronautics. This is one plane for one flight school.

Multiply this by numerous aircraft for each flight school, multiple passes daily for each aircraft, and multiple flight schools. I've documented one specific aircraft passing my house 25 times in one day.

The noise is never ending. It begins before 8AM and ends well past 8PM.

Families cannot enjoy dinner. Forget working from home. Going outside isn't even considered. Closing your windows and doors doesn't provide any refuge from the constant noise either.

How can you do this to your constituents? Don't you represent the residents of Torrance and not the pilots?

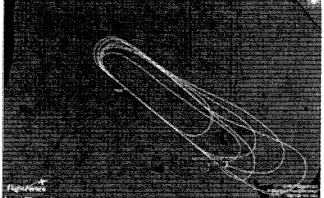

When are you going to institute no touch-and-go training and a landing fee? How has this been allowed to get to this point?

This is not only a quality of life issue, it is a safety issue. Do something! Having old noise regulations and a few fixed noise monitors is clearly not working.

Aircraft coming from other airports, even as far as Lancaster, to do touch-and-go training is well documented. Why is TOA the last of the airports to allow this? Why have other cities done something and not Torrance?

Thousands of complaints have gone unheard. When will you hear us?

I as well as many other residents look forward to voicing our concerns at the November 8th meeting. Thank you.

Subject: Airport Noise petition--Public Comment

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Thanks, Judy. With your petition you have now made a public declaration that my home has a serious property defect because it is located in a neighborhood where:

- "...training operations from the airport has brought noise to levels now intolerable for many residents"
- "...residents are also concerned about air pollution from aircraft using leaded fuel and safety of low training fliahts"
- "...these problems are also hurting residential property values."

ALL residents of the Hollywood Riviera must now disclose this information when they sell their home or risk being sued for fraud by a buyer.

This petition contains false statements and displays a clear and profound misunderstanding of the rules and regulations that govern airport operations in the United States. Like most residents of the Hollywood Riviera, I do not find the airport operations to be an issue at all. In fact, the current number of airport operations are at 40% of the levels when I moved here nearly 50 years ago.

I urge you to go to torranceairport.org/petition/ to learn more about the problems with your petition.

Report to City Council on the Casper monitoring system 11/8/2022

I understand that you will make a report to the City Council on 11/8 about the status of the Casper monitoring system. I am hoping that it will include responses to questions and suggestions I have made since the system began operations:

1. CASPER NOISE LAB

- On 8/16, I reported some bugs in the system.
 - There is no definition of an "aircraft noise event."
 - The displays noted hundreds of flights before 7 AM. There are no flights from Torrance before 7 AM.
 - The flight rate is shown as exceeding 250/hr over most of the day. It is impossible to launch or recover an aircraft every 30 seconds per runway.
 - Listed as the top noise-maker at 83 dbA is a Sling-2. This is one of the quietest aircraft in operation at our airport. I performed a noise test for Sling Pilot Academy on 5/25 using their standard trainer, the Sling NGT. It did not exceed 76 dbA—even at maximum RPM and low altitude. I had shared those results with you previously.
 - The graphic of "aircraft noise events" with altitude shows over a hundred occurred above 2,000 ft and 32 above 5,000 ft. This makes no sense.
- On 8/28, I recommended additions to Casper displays
 - Add a line depicting the Torrance noise limits (82 dbA) on all graphics which show noise levels for "aircraft noise events". This would enable one to quickly see which exceed those limits and which do not.
 - Add a depiction of the locations of the two traffic patterns where one should expect frequent flights at or below 1,100 MSL to the graphic map showing the sensor locations. (see below)
 - The depiction of the geographic distribution of noise complaints (critical to understanding where the issues occur and what options are available to address them) shows only one large "blob" on Hawthorne Blvd. west of the airport. UPDATE: On 10/24, I found that there are now additional "blobs" located miles from the airport. This information is useless! Where are the noise reporting districts that used to be reported? See additional suggestions below.

2. WEBSITE

• On 8/8, I noted that Torrance Municipal Code (TMC) still contains many sections that improperly attempt to regulate aircraft in flight at Torrance airport and, combined with the public's misunderstanding about TMC's lack of authority to regulate aircraft in flight, causes unnecessary confusion for the airport neighbors. This results in many complaints to you and your staff about aircraft flying perfectly legally and safely. I suggested that clean-up of the TMC and repeal of those invalid and unenforceable sections would reduce the unnecessary work for you and your staff. As you recall, you suggested I bring this up in conjunction with this report.

 On 10/12, I wrote that the website still states that left turns on west departures are not permitted without ATC direction. <u>This is wrong</u> and conflicts with Federal Aviation Regulation part 91.3. The Pilot in Command may maneuver however she/he deems necessary for safe and legal operation—WITHOUT ATC direction.

3. "NO LEFT TURN" LETTERS

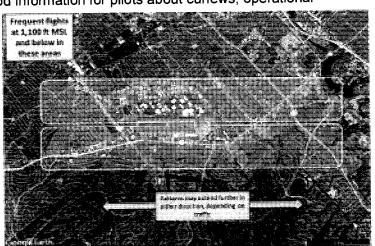

- On 8/14, I received one of your "no left turn" letters and wrote you to suggest some changes, but I have received no response from staff:
 - The aviation standard for measuring altitudes is above mean sea level (MSL), not above ground level (AGL), which is impossible to know when flying over the variable terrain surrounding the airport.
 - It is important to note that any recommended procedures in the letter adhere to Federal Aviation Regulations (FARs) and should recognize the authority of the Pilot in Command under FAR 91.3: "The pilot in command of an aircraft is directly responsible for, and is the final authority as to, the operation of that aircraft". In other words, the Pilot in Command may make any maneuvers necessary to insure the safety of flight or to comply with FARs--with or without ATC direction or concurrence.

4. ADDITIONAL SUGGESTIONS FOR THE CITY WEBSITES:

 The website directs the reader to the Airport Commission minutes to retrieve the Noise Abatement Reports. This requires one to search through those each of those minutes to find the reports. Why not just post those reports on the Noise Abatement Website with links to each. Same recommendation goes for the Airport website.

The website has lots of good information for pilots about curfews, operational

limitations, noise monitors, etc. It should also include information for the community, such as a depiction of where the traffic patterns are located and the effect of airport operations that will occur in them (sample shown here). This type of community information was recommended in the

City's report published in 1981 (*Airport Noise Control and Land Use Compatibility Report*), but the recommendations were never implemented. As a result, now that the conditions predicted by the study have come to pass, we have many people living in those areas that are complaining about the effects predicted over 40 years ago.

A discussion if the report's recommendations can be found at **torranceairport.org/facts/**. Navigate to the "1981 ANCLUC Report."

Ms. Sara L. Mikolop Acting Assisting Chief Counsel for Regulations Federal Aviation Administration 800 Independence Avenue, S.W. Washington, D.C. 20591

RE: City of Torrance Left Turn Restriction (Municipal Code § 51.2.3(e))

Ms. Mikolop,

This correspondence conveys the City of Torrance's position on the enforceability of its left turn restriction (Municipal Code § 51.2.3(e)).

Based on the City's review and analysis of the relevant federal statutes and regulations; correspondence, communications, and discussions between the City and FAA; and applicable caselaw, it is the City's position that its left turn restriction is enforceable. The restriction does not conflict with federal authority and is a reasonable regulation necessary to protect the nearby residential community from aircraft noise in light of the steeply rising terrain to the southwest of the airport. As such, the City will enforce Section 51.2.3(e) in cases it is consistent with the Tower's directions.

Relevant Background:

Section 51.2.3(e) of the Torrance Municipal Code provides:

Aircraft taking off to the west shall not turn left until they have either reached the ocean or attained an altitude of fifteen hundred (1,500) feet.

As the owner and operator of the Torrance Airport, in 1958 the City enacted section 51.2.3(e) "as part of the noise abatement program to discourage pilots from flying over rising and noise sensitive terrain until reaching an altitude that would mitigate the noise exposure to the residents below." (City's Nov. 12, 2020 Letter to FAA.)

In 2014, the City began sending notices of violation of this section to aircraft operators because the City was assured by the FAA representatives that the section was enforceable and only after staff confirming that the turn was not directed by the Tower. However, the City has not sent any notices since Torrance Airport Association representative reached out to the FAA raising questions about the enforceability of the provision. Instead, the City has engaged in good faith discussions with the FAA regarding this issue.

G D B Gatzke Dillon & Ballance LLP

Ms. Sara L. Mikolop September 20, 2022 Page 2

By letter dated February 18, 2020, the FAA expressed its opinion that section 51.2.3(e) "applies to aircraft in flight" and is therefore "not consistent with Federal statutory and regulatory framework" on airspace management and aircraft operations. This opinion was again reiterated in your August 9, 2022 letter to City Attorney. However, the FAA admitted that "state or local governments that own and operate airports are not prohibited from carrying out their proprietary powers and rights" and have "authority to promulgate reasonable, nonarbitrary, and non-discriminatory regulations addressing aircraft noise and appropriate local interests" so long as they comply with the Airport Noise and Capacity Act of 1990. (FAA Feb. 18, 2020 Letter.)

Brief Summary of Responsibilities re Airport Noise:

According to the FAA Airport Compliance Manual 5190.6B, Chapter 13, the federal government has the authority and responsibility to control aircraft noise by the regulation of source emissions, by flight operational procedures, and by management of the air traffic control system and navigable airspace in ways that minimize noise impact on residential areas, consistent with the highest standards of safety and efficiency. 49 U.S.C. §§ 40103(b), 44502, and 44721 provide extensive and plenary authority to the FAA concerning use and management of the navigable airspace, air traffic control, and air navigation facilities.

Airport sponsors are primarily responsible for planning and implementing action designed to reduce the effect of noise on residents of the surrounding area. Such actions include optimal site location, improvements in airport design, noise abatement ground procedures, land acquisition, and restrictions on airport use that do not unjustly discriminate against any user, impede the federal interest in safety and management of the air navigation system, or unreasonably interfere with interstate or foreign commerce. (FAA Airport Compliance Manual 5190.6B, Chapter 13.)

Airport sponsors have proprietary authority to restrict access as a means of reducing aircraft noise impacts in order to improve compatibility with the local community. To accomplish this, airport sponsors must comply with the national program for review of airport noise and access restrictions under the Airport Noise and Capacity Act of 1990 (ANCA). ANCA, implemented through 14 Code of Federal Regulations (CFR) Part 161, requires that certain review and approval procedures be completed before a proposed restriction that impacts Stage 2 or Stage 3 aircraft is implemented. (FAA Airport Compliance Manual 5190.6B, Chapter 13.)

Section 51.2.3(e) Is Enforceable:

Grandfathering Under ANCA

ANCA contains special provisions that "grandfather" restrictions on Stage 2 aircraft operations that were proposed before October 1, 1990. ANCA also grandfathers restrictions on Stage 3 aircraft that were in effect on October 1, 1990. Airport sponsors who adopted restrictions before ANCA was enacted on November 5, 1990, may amend these restrictions without complying with

$G \ \middle| \ D \ \middle| \ B \quad \begin{array}{c|c} \textbf{Gatzke Dillon \& Ballance LLP} \\ \textbf{LAWYERS} \end{array}$

Ms. Sara L. Mikolop September 20, 2022 Page 3

ANCA provided the amendment does not reduce or limit aircraft operations or affect aircraft safety. However, amendments to existing restrictions and new restrictions are subject to review for compliance with the federal grant assurances and federal surplus property obligations. (FAA Airport Compliance Manual 5190.6B, Chapter 13.)

14 C.F.R. Part 161.3(a) exempts (i.e. grandfathers) restrictions on Stage 2 aircraft operations that were first proposed before October 2, 1990 and on Stage 3 aircraft operations that became effective before that date. 14 C.F.R. Part 161.7(d)(2) exempts restrictions on Stage 2 aircraft operations "at a general aviation airport where the airport proprietor has formally initiated a regulatory or legislative process on or before October 2, 1990." In addition to the noisier aircraft phaseout, all existing use restrictions that were in place prior to the Part 161 October 2, 1990 grandfather cutoff date continue in effect.

Since Torrance Municipal Code section 51.2.3(e) was enacted in 1958, before the Part 161 October 2, 1990 grandfather cut-off date, it is an enforceable left turn provision.

Reasonableness

The FAA Airport Compliance Manual 5190.6B, Chapter 13, provides the following guidance on the FAA's approach to noise issues:

The FAA has encouraged a balanced approach to address noise problems and has discouraged unreasonable airport use restrictions. It is FAA policy that airport use restrictions should be considered only as a measure of last resort when other mitigation measures are inadequate to satisfactorily address a noise problem and a restriction is the only remaining option that could provide noise relief. This policy furthers the federal interest in maintaining the efficiency and capacity of the national air transportation system and, in particular, the FAA's responsibility to ensure that federally funded airports maintain reasonable public access in compliance with applicable law.

The City's restriction on aircraft left turn in section 51.2.3(e) is part of the City's noise program, and the City does not issue notices of violation of this section if the turn is directed by the Tower. The section was enacted because the area that is impacted by left turns (to the southwest of the airport) is predominantly single family residential and therefore noise sensitive, and the terrain to the southwest is steeply rising. (City's Nov. 12, 2020 Letter to FAA.) The restriction on left turn is the only option to provide noise relief to the residential area in light of the steeply rising terrain. Therefore, the restriction is reasonable and can be enforced.

G D B Gatzke Dillon & Ballance LLP

Ms. Sara L. Mikolop September 20, 2022 Page 4

Response to the FAA February 18, 2020 Letter:

In its February 18, 2020 letter to Torrance Airport Association representative, FAA cited several legal opinions, which either support the City's position regarding the enforceability of the left turn restriction, or are inapplicable/distinguishable.

Friends of the E. Hampton Airport v. Town of E. Hampton, 841 F.3d 133 (2d Cir. 2016) confirms section 51.2.3(e) is enforceable. This case reinforced federal recognition of the proprietor exception to preemption – the court confirmed that "municipalities retain some proprietary authority to control noise at local airports," albeit such authority is limited. Id. at 139. The court "reasoned that, because an airport proprietor 'controls the location of the facility, acquires the property and air easements and [can] assure compatible land use,' it might be liable to other property owners for noise damage and, thus, has a right 'to limit [its] liability by restricting the use of [its] airport." Id. The court explained, however, that the proprietor is vested "only with the power to promulgate reasonable, nonarbitrary and non-discriminatory regulations that establish acceptable noise levels for the airport and its immediate environs." Id.

Here, the City is the proprietor of the airport, and as such, it has authority to enact the left turn restriction, which is a reasonable, non-arbitrary, and non-discriminatory regulation, enforced only when the left turn is not directed by the Tower, and intended to protect from excessive noise to the residential community in the immediate vicinity of the airport and limit the City's liability to those residents.

Similarly, National Helicopter Corp. v. City of New York, 137 F.3d 81 (2d Cir. 1998) [affirming city's restrictions on the FBO facility use and curfew on facility operations] applies here because the City has the proprietor and police power authority to impose reasonable noise restrictions at the airport. The National Helicopter court specifically stated that "Congress has consciously delegated to state and municipal proprietors the authority to adopt rational regulations with respect to the permissible level of noise created by aircraft using their airports in order to protect the local population."

Other cases the FAA cites in support of its preemption argument are either inapplicable or distinguishable:

• Montalvo v. Spirit Airlines, 508 F.3d 464 (9th Cir. 2007) – this case concerned a question of whether the state law on the duty to warn about the risk of deep vein thrombosis applies to airlines. The FAA cites this case for the court's general statement that "the FAA preempts the entire field of aviation safety from state and territorial regulation." However, this case does not support the FAA's position that section 51.2.3(e) is preempted because (1) section 51.2.3(e) is grandfathered in for purposes of ANCA; (2) the City's restriction

G D B Gatzke Dillon & Ballance LLP

Ms. Sara L. Mikolop September 20, 2022 Page 5

is reasonable and is part of the City's noise program; and (3) the City does not enforce the left turn restriction when the left turn is directed by the Tower.

• French v. Pan Am Express, Inc., 869 F.2d 1 (1s Cir. 1989) concerns pilot qualifications and not aircraft noise regulations. The court's mention of another case holding that "the majority ruled that aircraft noise was wholly subject to federal hegemony, thereby preempting state or local enactments in the field" is dicta and does not take into consideration the City's enforcement of the reasonable left turn restriction, which is the only viable solution to address the noise concerns of the nearby residents, only when not in conflict with the Tower directions.

Conclusion:

As explained above, the City's left turn restriction is not preempted by federal regulations and is a reasonable local regulation necessary to reduce noise. Therefore, the City will enforce the restriction in cases where it is consistent with Tower directions.

Very truly yours,

Subject:

The Truth about The Petition to Reduce Torrance Airport Impacts

Signatures are being solicited for a petition to the City of Torrance demanding changes that would damage the Torrance Airport--an irreplaceable transportation, education, recreation and disaster response asset for the entire South Bay. It is based on many misunderstandings of the law and false assumptions. Please read the following comments about the statements made in the petition:

"Whereas a large increase in training operations from the airport has brought noise to levels now intolerable for many residents;"

Some important facts:

- Current Torrance Airport operations are at only 60% of the levels in 1990 (245,893 per year) and have generally decreased since that year, reaching a low of 109,790 in 2017.
- Flight schools all over the world are responding to the world-wide shortage of pilots which continues to cause cancelled airline flights and reduced schedules.
- These schools are operating according to FAA regulations and are providing a great opportunity for many young men and women to start careers as commercial pilots.

"Whereas residents are also concerned about air pollution from aircraft using leaded fuel and safety of low training flights over densely populated neighborhoods;"

They may be concerned, BUT:

- There is no proof that lead in aviation fuel causes any problems around the airport.
- FAA regulations specify what fuel can be used for specific aircraft.
- Unleaded aviation fuel has been approved by the FAA for all piston-powered aircraft as of 1 September.
- Sling Pilot Academy, which accounts for over half of the flights, already uses UNLEADED auto fuel in their aircraft.
- Flight altitudes are specified by FAA regulations. Suspected violations should be reported to the FAA.

"Whereas these problems are also hurting residential property values; "

This claim is not supported by facts:

- The airport started operating in 1943--long before any of these houses were built.
- Property values fluctuate due to many factors unrelated to airport operations.
- No one has documented a reduced tax bill or sales figures showing a sale at less than purchase price to show that airport operations are the cause.
- Since 2004, residential property owners in California have been required to disclose to prospective buyers that the property is in the vicinity of an airport.

"Whereas the City owns the airport but, due to a change in federal law, the City no longer has the authority to adopt new airport noise abatement laws;"

Federal law regarding the airport has not changed in over 65 years.

- The FAA has a procedure to impose or modify noise abatement procedures (14 CFR Part 150).
- This procedure requires studies and data to support the proposed change.
- The FAA can provide grants to airport operators that fund these studies.
- Any proposed changes must be reasonable, non-arbitrary, non-discriminatory and have no adverse effect on safety.

"Whereas, based only on a verbal opinion from the FAA, City staff stopped enforcing its longstanding, grandfathered early-left-turn law which sanctions pilots who take off and turn left over residential neighborhoods on higher ground south of the airport; "

None of the above statement is true:

- In 1958, Congress created the FAA and gave it EXCLUSIVE authority to regulate aviation in the United States. Under the Supremacy Clause of the U S Constitution and the Preemption Doctrine (which follows from it), states and municipalities have NO authority to regulate aircraft in flight.
- In 1978, the United States sued the City of Blue Ash in Federal Court over its attempt to regulate aviation at its airport for noise abatement purposes. Blue Ash lost the case and also lost the appeal in 1980.
- The myth that the left turn prohibition was "grandfathered" under the Airport Noise and Capacity Act (ANCA) was based on misinterpretation of a VERBAL comment made by a local FAA safety engineer. ANCA was passed in 1990 and only deals with Stage 2 and 3 turbine-powered aircraft weighing over 12,500 lbs.
- In 2020, the Chief Counsel of the FAA issued a letter recounting the above and noting that Torrance, like the City of Blue Ash, has never had authority to regulate aircraft in flight at its airport. That letter was shared with the Torrance City Council, Airport Commission and City Attorney in 2020.
- In 2022, the FAA issued a WRITTEN opinion TO THE CITY OF TORRANCE reiterating previous statements and court cases.

"Whereas the City's noise monitors will not resolve negative impacts from training operations;

This was predictable.

- The new monitoring system was "sold" based on the City's plan to regulate aircraft in flight, which it has no authority to do.
- Before the old system was shuttered, there were only TWO NOISE VIOLATIONS on average PER WEEK at a cost of approximately \$1,000 PER DAY.
- If aircraft do not violate the TMC noise levels, they are operating legally.

"Therefore, the undersigned residents of Torrance and adjacent cities, petition the Mayor and City Council to:

- Hire outside counsel with expertise in aviation law to identify and evaluate options that
 may still be available to reduce the airport's environmental impacts (e.g., charge
 landing fees, close south runway, resume enforcing early-left-turn law, prohibit sale of
 leaded fuel, etc.) and to defend the City against any legal challenges;
- Pay the City's legal expenses from the City's Airport Fund, not from general taxpayers;
 and
- Hold public hearings to discuss and consider all legally available options."

This petition exhorts the City Council to waste a lot of money we don't have. The petition ignores the fact that knowledgeable teams are already working on pursuing legal ways to reduce noise from airport operations.

- Spending money on lawyers to chase unlikely outcomes and risking a lawsuit by the United States is not a great strategy
- The City Council has already looked at landing fees and decided not to follow Santa Monica's approach (to destroy the airport);
- The FAA likely will not permit closing any runways for noise abatement without a Part 150 study
- Municipal laws like the TMC "no left turn" law have been ruled invalid and unenforceable in Federal Court;
- The FAA has approved the use of unleaded aviation fuel in nearly all aircraft engines as of 1 September 2022
- The Airport Fund contributes millions of dollars every year to the General Fund.

 Any money wasted on this plan to hire lawyers will actually reduce that

 contribution to the General Fund
- Any member of the public already has the option to present their "legal options" to the Airport Commission and City Council.

Subject: Nov. 8 Airport Agenda Item

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Good afternoon,

My name is Ginamarie Will. I am a 3rd generation Torrance resident and proud first-time homeowner in the Walteria neighborhood. I have been dismayed by the incessant noise that stems from the increase in the number of flight training schools at Torrance Airport. I was raised in Walteria adjacent to the airport. As a child, I developed a deep love and appreciation of aviation and delighted in seeing planes occasionally fly over my house. Now, I dread them.

The Walteria neighborhood has been bombarded by south training pattern flights from flight schools that occur so frequently and without interruption, that I have lost any interest in sitting outside on my balcony or in my backyard to enjoy the home I worked so hard to buy. When one plane takes off from the airport to my north to begin a loop, another is inevitably flying over Walteria in the south pattern halfway through its loop. This cyclical pattern of training creates non-stop droning that reverberates off the PV hillside and surrounds me on all sides for as much as an hour at a time.

Every flight raises the ambient noise 10-15+ decibels over the 55 decibel baseline for my neighborhood (one of the strictest residential noise limits in Torrance) for 15-30 seconds on average. It is NOT the same as a loud car going by or a leaf blower running on and off for a few seconds. These training patterns cause constant background noise that has impacted my quality of life and my work as full-time remote employee for a private sector consulting firm. It is embarrassing and frustrating to have to apologize to clients for the plane noise they can hear on my phone calls with my double-pane doors and windows shut. I have even resorted to using sound canceling headphones to try and block the noise so I can simply concentrate. What is the point of having a noise sensitive designation for a neighborhood if the acceptable limits are constantly being overrun?

And what is the point of having a noise complaint system if it lacks optimal functionality? I wholeheartedly hoped the system would give residents a viable way to voice concerns and be heard, but now I am not sure it does much of anything. Issues I have noticed when using it include:

- 1. The "live" flight tracker is 10 minutes behind real-time. That is not effective because it inhibits users from correctly identifying planes that are causing noise issues when they are actually occurring.
- 2. The Whiffletree Lane noise monitor (TOA-6) has not been active since the Casper noise complaint system was launched. Every plane that flies in the south pattern flies over this noise monitor. This creates a loophole for planes to fly however they want, and gives residents in that area no way to hold planes accountable for excessive noise.
- 3. Noise complaints provide an option for users to select "Response requested." I have never received a response (that is, a follow-up reply from a real person regarding my complaint) the few times I have selected this option. The only thing I have received are boilerplate-language records of my aircraft noise complaints. It's misleading to offer a response option when no follow-up is guaranteed. If that is not the intent of the system, then perhaps the option should simply be changed to "Generate Record." This of course raises the question of whether the

noise complaint system actually has any teeth to it at all; if complaints are merely logged, how does one know they are actually being listened to or acted on?

I strongly urge the Torrance City Council to listen to and protect the residents in Walteria who are being unfairly impacted by the large number of flight training schools at Torrance Airport, which has led to increased use of the south training pattern as "overflow" for the excessive number of training flights taking place. Many residents have strong ties to this community going back decades. We remember how all planes at Torrance Airport used to respect the unwritten rule of avoiding residential areas under the south pattern, and would fly due west to the ocean before making any left turns.

Torrance should not allow any private flight school to use a public resource for its own benefit while disrespecting the residents who live near that resource and help pay for it through their taxes. The city should either permanently reduce the number of flight schools that can operate out of Torrance Airport, or ban flight schools altogether at Torrance Airport. The current situation is untenable and unacceptable.

Sincerely,

Ginamarie Will

Subject: November 8 Airport Agenda Item

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Dear Torrance City Council Members,

As a Torrance resident, I urge City leaders to protect our community from excessive airplane noise and take action to reduce the use of the south training pattern at the Torrance airport. Torrance noise abatement instructions clearly state that "south pattern training, while not prohibited for fixed wing aircraft, is discouraged in order to avoid adjacent noise sensitive areas on the rising terrain". However, the reality is that these "special noise considerations" are absolutely and entirely ineffective at reducing noise. I live under the "south training pattern", and I can tell you with absolute certainty that the flight training schools routinely use the south training pattern, not as an unavoidable emergency measure, but as a matter of course. In fact, use of the south training pattern has never been greater than it is today, due to (1) an overall increase in training flights; and (2) the belief in the flying community that Torrance has no authority to enact noise abatement controls. Some flight schools claim to give consideration to the noise recommendations, but in reality it is simply more profitable and convenient for them to jam as many flights as possible into that training pattern, and they will not stop doing so unless the City takes firm action. Therefore, voluntary compliance has proven to be ineffective for noise abatement, and the City must use every means at its disposal to gain compliance with established noise guidelines. The City should explore the following means to reassert its authority and enforce reasonable noise abatement procedures:

- Include compliance with all noise abatement guidelines as a condition of the lease agreements for fixed base operators, including penalties and even termination of lease agreements for operators who repeatedly ignore noise abatement procedures.
- Use landing fees and keep them in place until the flying community demonstrates respect for and compliance with noise abatement guidelines.
- Close the south runway, if planes continue to fail to follow noise abatement procedures.

Reasons for City Action:

South training pattern flights disproportionately increase the cumulative environmental noise.

Excessive use of the south training pattern significantly increases environmental noise above and beyond normal airport use due to its "looping nature". Specifically, training (1) dramatically increases the number of noise events because a single plane will pass by the same location twice (on the upwind and downwind stretches) and because training loops often consist of 6 to 12 repeated patterns; thus, a single training flight can generate up to 24 noise events! And (2) because of the looping path, training flights spend more time in the noise sensitive areas than a straight out flight, which means that the cumulative sound exposure over time is far greater.

Excessive environmental noise is a threat to public health and welfare.

The Environmental Protection Agency has long recommended that residential neighborhoods maintain noise levels below 55 dB to prevent hearing loss, general annoyance, and interference with concentration (see Information on Levels of Noise Requisite to Protect Public Health and Welfare, 1974). Such studies provide the scientific basis for the noise

levels established in the Municipal Code, which identifies 55 dB as the environmental noise limit for residential neighborhoods surrounding the airport. However, in September 2022 alone, the Casper Noise Lab recorded almost 5,000 noise events exceeding 55 dB at Sound Monitor #1. That equates to one excessive noise event every 4 minutes during every waking hour of every day of the month.

North training pattern is a better alternative.

There is no justification for pilots to train in the south pattern over an exclusively residential and noise sensitive neighborhood, when pilots have the reasonable alternative of training north of the airport over an industrial zone. The City already determined that rotary-wing training in the south pattern was inappropriate, which is why it is banned by the Municipal Code. That same logic should extend to fixed-wing aircraft.

Restoring the peace and protecting quality of life.

City leaders are charged with balancing competing interests to maintain a high quality of life for all residents. However, the rampant lack of compliance with noise abatement procedures has upended the coexistence between the airport and the surrounding community, as evidenced by the more than 700 households that signed the petition to address airport noise. Failing to address the imbalance will force out current residents and turn away potential future ones, who will look elsewhere for a better quality of life. This will decimate the neighborhood and hammer residential property values, and by extension, reduce property taxes, depriving the City of its single largest source of general revenue. City leaders must act now to restore balance and keep the noise situation from spiraling out of control.

We have experienced an unprecedented increase in the number of fly overs due to increase traffic from a recent flight school located at the airport - Sling Flight School- who apparently recruits students from all over the world to learn to fly these cheap 'sling' planes manufactured in south Africa.

We are not against our local airport but the constant bombardment has dramatically affected the quality of our life and others living in the New Horizons Senior community.

We have been advised that the codes overseeing air traffic at the airport meaning hours allowed for training or touch and goes, etc, have not been updated for well over 30 years and this needs to be addressed. Just evaluating a monitoring system isn't an adequate response to this escalating problem, which will only be ascerbated with the closure of Santa Monica Airport in 2028.

If our City Council doesn't respond to the concerns of it's citizens, then we can learn from the citizens of Santa Monica how to solve the problem permanently.

Dear Councilmembers,

My name is Daniel Chang and I live near Lago Seco Park in Torrance. I've lived here for the past six years and I've grown accustomed to noise from air traffic originating from the nearby airport. However, beginning earlier this week, I've noticed a HUGE increase in airplane noise. Not only are there more planes constantly flying over my house, but they are flying lower and well into the evening. The noise resonates through my home even with all my windows closed! This is intolerable and must be addressed. I hope to hear from you soon.

Best,

Daniel Chang

Dear Council Members.

I would like to express my concern over the increased noise from the Torrance Airport training classes that have been flying over my home for the past two years.

Since 1965, when my family moved to Marble Estates, I have happily lived next to the Torrance Airport. My father was a pilot, and we spent many years flying out of Torrance, well aware of the guidelines in place for safe flying while maintaining a peaceful partnership with the community on the ground. When I purchased my home in the Hollywood Riviera in 2016, I did so with the understanding of what the airport rules were, as stipulated in the Torrance MC 51.2.3 (e):

Take Offs and Landings:

Aircraft taking off to the west shall not turn left until they have either reached the ocean or attained an altitude of fifteen hundred (1,500) feet.

I am aware of the correspondence between Mr. Bill Gates and the FAA, as well as the follow-up letters from Ms. Linda Cessna and Mr. Patrick Sullivan re TOA's request for clarification on the interpretation and enforcement of the pre-ANCA status of our MC 51.2.3(e), which the FAA did not address.

Our Code is pre-ANCA, having been in place since before the FAA's Airport Noise and Capacity Act of 1990, and should be considered grandfathered and therefore enforceable.

I would like the City Council to enforce the Municipal Code as written, just as they would any other municipal code laws. I made an investment in purchasing my home with the expectation that the Torrance Municipal Code would be enforced, as any other laws provided by the City of Torrance for the safety and peaceful lifestyle of its community. Please honor your commitment to enforcing the laws of our city, for the community who are depending on you to do so.

Sincerely, Elizabeth Spatz Hollywood Riviera

Subject: Nov. 8 Airport agenda item

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

As residents of Torrance for over 35 years, the increase in frequency and noise level of flights is creating a public nuisance. Not only is the noise level injurious to one's hearing, it's difficult to work, or read in our home, which has double glazed windows. It's also very difficult to have a conversation in our yard with the nearly constant circling of planes over our neighborhood. The student pilots' touch-and-go flights over our area are the most flagrant offenders due to the repetitive loud noise caused by the constant circling around the same sections of south Torrance. The pilots do not turn north or south at the ocean, but instead turn north just west of Hawthorne Blvd., with repetitive circling over this area at low altitudes.

The following is a sample from the Airnoise log of flights over our house from 1:32 pm to 1:44 pm on Oct. 27th. This data doesn't capture all of the flights during the 12-minute time period. As seen, the altitude is quite low and the distance very close.

SENT	October 27, 2022 13:34	KTOA	General Aviation	ADVANCED CHARTER & INSTRUCT	N249FS	172R	Unknown	0.26 / 560
SENT	October 27, 2022 13:32	KTOA	General Aviation	ELMINOUFI GARY	N815YK	CJ-6A	Departure	0.23 / 1001
SENT	October 27, 2022 13:32	KTOA	General Aviation	AVIATION FINANCIAL CORP	N165TW	SLING	Departure	0.1 / 801

The city should address this issue by incorporating the following enforcement strategies:

- Monitor noise levels with additional monitors, and set reasonable standards which permit residents to enjoy activities both indoors and outdoors.
- Set fines for noise and code violations similar to those at the Santa Monica Airport, where they have a system of progressive monetary fines. Torrance Airport had a violation rate 7 times higher than SMA in 2018. City code 51.7.3 should be strictly enforced, which states that any aircraft in violation three or more times over three years will be denied use of the airport.
- 1. Initiate landing and takeoff fees, which would generate income for the city and cover the cost of additional monitors. Additionally, fees could be used to obviate any potential legal actions against the city. Aircraft owners or operators using the Santa Monica Airport are required to pay a landing fee. Currently, the fee is \$5.48 per thousand pounds certificated maximum landing gross weight.

- 1. Restrict the number of training flights, ensuring that they turn at the ocean when making their loops. Currently there are 7 flight training schools at the Torrance Airport, which is too many for a municipal airport surrounded by so many residential tracts. There are only two flight training schools each at the Hawthorne and Santa Monica Airports.
- Stop the sale of leaded gasoline at Torrance Airport. The same lead that has been banned in automobile gasoline, paint and toys is also used in aviation fuel. The leaded fuel is burned mostly by the small planes that take off and buzz over our neighborhoods. The lead comes out in the exhaust and falls on the people, homes, and schools below; it drops **like lead** at the rate of two grams per gallon. The FAA does not allow the city to ban the total use or sale of leaded fuel at the airport, but in no place do they clearly state the city must provide tanks, or that the city must sell fuel. It is time to retire our old tanks and get out of the leaded fuel business. There are several elementary schools and two middle schools in close proximity to the takeoff, landing and low altitude flight paths.

The following is from the San Francisco Chronicle, dated July 29, 2022.

"Santa Clara county released its peer-reviewed <u>study</u> from Mountain Data Group in August 2021. The study, which analyzed 17,000 blood samples from children who lived within 1.5 miles of the airport from 2011 to 2020, found levels approaching 2 micrograms of lead per deciliter in children close to the airport. The U.S. Centers for Disease Control and Prevention recommends further treatment or testing at 3.5 micrograms per deciliter.

The CDC considers no amount of lead in the bloodstream to be safe, and warns that children have a lower threshold to lead toxicity than adults, making kids more vulnerable to developing all sorts of health and behavioral problems."

We, as Torrance residents, are simply asking for reasonable standards and compliance, just like any other business is expected to comply in order to function in our city and promote a safe and environmentally friendly community.

Re: Nov. 8 Airport agenda item—Torrance Municipal Airport (KTOA) Noise

Problem statement: Since moving to the Torrance Riviera seven years ago, the significant increase in KTOA noise has become a public nuisance. As a result, that noise interferes greatly with our family's enjoyment of our home's views, our deck, our quiet dinners, and our working from home.

Observations: KTOA noise is exacerbated by a *pattern of frequent aircraft take-offs* (some as little as within 1-4 min intervals) plus *flying too close/too low to us* (\leq 0.3 miles distance from us and < 1500' above our home which sits at an elevation of 234 ft). (Data available upon request.) Beside the noise, *low flying aircraft are inherently dangerous to all of us living on the ridge as it reduces the margin of error for these aircraft.* It is a public safety issue.

Desired solution: It is within your purview to *abate this public nuisance by taking concerted action to implement* the following items which will help *to minimize the noise* and disruption in our lives as well as *to increase public safety*:

- Strict enforcement, esp. of 1500' minimum altitude policy
- Deny KTOA use to repeat offenders
- Charge landing fees for all aircraft
- Charge meaningful monetary fines for policy violations
- Use North Pattern for all training
- Limit # of training schools and require policy compliance

Thank you.

I have never understood those who move into a certain area because they like it, then want to change it. The airport was here before you complainers, now it is an issue? I've Been here since the late 1950's and do not find airport noise to be a problem.

Richard Page

As a concerned resident of the Torrance Hillside Overlay, I am submitting the below comments for your consideration:

- increased training and flight operations at the Torrance airport have brought an significant increased noise level to our area
- flight paths have routinely turned left over our area and have also gotten lower, thereby increasing the frequency and noise level
- it is very clear that any voluntary abatement isn't working
- your airport policies and lack of any workable enforcement are hurting our quality of life as well as property values.

Sincerely,

Steven Dennis

Hello,

My name is John, I live in Torrance, and I am a father to two small children. I am greatly concerned with the quality of the air surrounding the airport due to the leaded fuel used by most of the planes and helicopters at Torrance airport. Leaded fuel should be banned from any plane in use at Torrance Airport. The noise has also been very problematic. It is a constant droning, extremely loud, and disruptive. Please stop all training in the South Pattern and enforce the City's no-left-turn rule to keep planes away from quiet residential neighborhoods, often populated with many young children.

Best, John K.

Council members,

I am a 30 year resident of Walteria. We had always lived in sync with the airport, but over the last couple of years it seems that the noise is louder and more frequent.

I live on Newton street. Every day airplanes fly right above Newton and Bluff streets. The are very low, and very loud.

And I mean so loud that it interferes with normal everyday activities.

I like the fact that we have our airport. It seems that when noise regulations were followed it was OK. But noise regulations are not being enforced and the airport is reducing the quality of life for those of us in surrounding areas.

North of the airport is mostly businesses. Why can't they fly that direction for their continuous landing practices and not low over residential areas...

Hope something can be worked out.

Gary Hart

Subject: Airport Noise

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Dear Council Members,

I am a resident of Southwood Riviera and live directly under the west flight path. We purchased our home in 2001 knowing we were buying near the airport. We are not sensitive to noise. In fact our home backs up to Calle Mayor Middle School, so neighborhood noise is part of our daily lives. But in the last 22 years since we moved in, the traffic at the airport has grown substantially, effecting my neighborhood's quality of life. Some days it seems that plane after plane is taking off right at 7 am and some even after the 10 pm curfew. And during the months when should be able to take advantage of our wonderful weather and allow the windows to remain open 24/7, there are times when I cannot have a phone conversation with a client due to the loud airplane noise overhead.

In addition to the noise, there is also the concern of air pollution in our neighborhood. This is also not only a concern for us homeowners, but also a big concern for the children directly under the flight path at Calle Mayor.

There needs to be a reduction on the number of flight schools at the airport and the number of take offs and landings per day. Current laws/rules need to be enforced and when not followed by pilots, citations issued.

One of the benefits of living in Torrance has always been the small town feel, but with the increases of all the airport noise, emergency vehicle noise and other city noises that have crept into our town over the past years, we are feeling more like LA.

And just to note, in the time it's taken me to write this email, 6 plans have flown over my home.

Respectfully,

Pamela Punzalan

Hello City Counsel,

As I sit in my home with the windows closed, I am bombarded with the loudness of the small planes flying over head. I can find no peace in my own home. I dare not sit outside or the noise would be worse. They are so close and loud that I cannot stand it! This much noise was not present when I first moved into this home 4 years ago. The problem has gotten worse and I don't pay this much money to have to put up with this. I am considering moving my family to Long Beach. Where planes don't fly over head every 3-5 minutes and into the night seven days a week. There is no peace here.

Respectfully, Sonya Ehsan

My wife and I have lived in Torrance for over 35 years. Our two children (26 & 28) were born here as well.

As flight schools have been added and noise abatement tools and enforcement have been inadequate, the result is rather obvious. More noise and less compliance.

We get it...it's an airport. But when you effectively redefine its use and pair that with lax enforcement, you then create a cultural shift favoring commercial activity over residential wellness.

Torrance is supposed to be a 'balanced' city caring for residential, commercial, and industrial activities. As far as the airport is concerned, we've gotten out of balance. Too much commercial and not enough residential focus!

Best Regards,

Jon, Sandy, Adrianna and Anna Spallino

RE: TORRANCE MUNICIPAL AIRPORT INCREASED FLIGHT SCHOOL ACTIVITY

The traffic with light airplanes has increased enormously this year. Last Saturday we counted to 50 takeoffs, which is roughly a flight in the air every 4-5 minutes. It has not eased since then. It is enormously disturbing for us working from home during the pandemic and are depending on Zoom communication, which we must cease during flyover. We have lost our good quality of life as a basic right. I've lived on the same address for the last 30 years and never experienced low flying planes over our roof, which is not only disturbing but also dangerous. Why has the flying canal been changed. It used to be that all aircrafts make a right turn on Hawthorne Blvd. My emails and phone calls to Torrance City Hall have been to no avail. Please stop this harassment!

Thank you.

Subject: Airport Problems that the City must Address

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

My name is Steve Giffin and my family and I live on the boundary trail at the top of Torrance.

The airplane traffic has ruined our Summer and Fall. The constant low flying traffic is intolerable. It has affected our mood, nerves, and literally my mental health. When the training is in progress we cannot be in the backyard or have windows open. Even inside with windows closed we are still affected. Planes only a few hundred feet above our house, climbing with their engines revving, every 1-2 minutes is not something that should need to be endured. The south training pattern is the problem and it needs to be stopped so that trainers are not constantly climbing "up the hill" only a few hundred feet above the ground elevation merely to circle back and do it again minutes later.

The City Council needs to address these concerns for the citizens and neighbors of the airport. The airport needs to be a better neighbor and the people who use it need to earn the right everyday to exist in the community by minimizing their impact.

Sincerely,

Steve Giffin

Dear Councilmembers,

My name is Christina Andersen and I live and work in Torrance.

I'd like to share my thoughts regarding planes arriving and departing from Zamperini Field/Torrance Airport. In my experience the airplane noise in Torrance has always been a problem, but in the last couple of years it has become absolutely maddening. It seems there is hardly ever a break from planes flying overhead and it feels as though I'm constantly bombarded with airplane noise.

There are many options that the City might consider to help alleviate the impact of airplane noise on residents, such as strictly enforcing current rules and regulations including the time planes can begin arriving/departing, implementing landing fees, re-evaluating training patterns, and requiring flight schools to comply with the City's noise abatement policies.

Thank you for your time and efforts to make Torrance an even better place in which to live and work.

Sincerely, Christina Andersen

To whom it may concern,

Hello, my name is Charlie Delio and I live at in Torrance, CA. In recent times, I have noticed a substantial increase in overhead airplane noise as well as air traffic from multiple air craft flying in different directions. It seems that the Torrance airport has changed up some of their rules and regulations for the air craft flying in and out of this local airport. I have lived here in south Torrance since 1987. Never have I not been able to enjoy my cats in our backyard. Today, with planes buzzing constantly most mornings we are forced to stay indoors and just watch from inside our safe home. After learning that the airport lessened their restrictions allowing planes to fly low and further south over many residential neighborhoods such as ours, I see the outcome has been very negative for the residents in these neighborhoods. I understand there has also been an influx of flight school students who are practicing for their licenses. Truly the city of Torrance needs to review these latest changes which have increased the noise and the traffic of the overhead skies. Besides the noise and the danger of an accident, there could be health issues caused from the pollution generated by the close proximity of these jet engines to our homes. I greatly implore the City of Torrance to review their current rules and listen to the actual people that live under this flight path.

Thank you for your consideration.

Charlie

No. 4 topic: Noise monitor locations

My name is Rachel Livingston and I live in Torrance. The City's Code limits aircraft noise (to 82dB maximum or 88 dB Senel) <u>everywhere</u> outside the airport boundaries. But the City has only seven noise monitors, and they are spaced evenly around the airport. There are large gaps of about a half mile between them. Pilots can easily fly through the gaps and avoid the monitors. Even though they exceed the noise limit on the ground below them, they avoid getting detected by the noise monitors. The City should at least add more monitors on the West side of the airport so that more violations will be detected.

No. 5 topic: Stop training in South Pattern

The training in the South Pattern is also a big problem. There is more training now than ever before. About 60 percent of the airport's operations are training and much of it is done in the South Pattern. In the past that was not allowed. The City's no-left-turn rule was designed in the 1950s to keep planes from taking off low over quiet residential neighborhoods on higher ground. Instead, planes trained in the North Pattern over commercial/industrial areas on lower ground. That's the way it should be today.

Thank you for your concern in this matter

Rachel Livingston

To Whom it May Concern -

I understand that the Torrance City Council will be discussing the future of the Torrance airport at its November 8th meeting. I am writing today to support the continuation of the airport as a public resource.

I learned to fly at the Torrance airport in the early 1970's. At that time, it was the ninth busiest airport in the country in terms of aircraft operations that supported a vibrant learning environment for pilots. Today, given the shortage of commercial pilots, there is more need than ever to maintain airports like the Torrance airport to supply new pilots to replace the ones trained back in the 70's.

The airport is also home to the Robinson Helicopter Company, a global leader in the lightweight helicopter market. With its 1,300 employees based in Torrance, it provides good paying jobs in the city.

While some might view the airport as a nuisance, I view it as sign of a vibrant economy in a world class city. Over the years it has been a good neighbor to the people of Torrance and has provided support to the community in the form of manufacturing, training, and access to the aviation industry. It would be a shame to throw away this amazing resource when the need for its services are in such demand.

Sincerely,

Warren Jewell

Mayor Chen and City Council members,

Some nine years ago, the City (with no warning to, or conversation with residents) signed a contract allowing Massachusetts-based Aviad to have a West Coast home base to fly their sky banner advertising business out of Torrance Airport.

Residents soon realized what a noisy and dangerous decision this was and worked hard to make the City realize the mistake. As a result, the contract was not renewed, and instead was ended in 2014.

The difference here is that the noise and safety issues with the Airport itself, have been going on for many, many years now. But, the City has been somewhat reluctant to acknowledge that they must listen to homeowners as they move forward with decisions.

There are many ways to help fix this problem. But first, you must acknowledge that this is not simply a matter of residents whining about some occasional burst of noise; at the very least, conversations, both outside your house and inside your home, are frequently ground to a screeching halt because a plane is flying so low overhead that, as they say, you can't hear yourself think.

It's one thing if the dog doesn't hear you yelling to come fetch the bone you just threw; it's quite another when you're inside, at your desk, on a business call, and have to explain to a client/customer/boss that they need to repeat what they said ... yet again.

- there's nothing wrong with listening to opinions of pilots, most of whom do a good job of following the rules and acting as responsible, considerate neighbors. However, it's a problem when pilots are allowed to make a presentation to the airport commission, but it's utterly one-sided because residents are not included with presenting their side of the story.
- ban the sale of health- hazardous leaded fuel.
- the concept of "flying friendly" is a truly lovely one. Unfortunately, it has proven to be woefully ineffective when it comes to a certain population of pilots who clearly could not care less about receiving such a letter from Torrance. It's time, finally, to put fines in place that incentivize pilots to start observing rules in place and acting like they care about the residents in the homes below.

Fines must be significant enough that they will get the attention of pilots.

- The city should limit the number of flight schools; there already seem to be too many to be handled comfortably in light of all the problems that are caused in the surrounding neighborhoods.

And, there should be a clause in their lease that allows for revoking of that lease when the pilots / schools do not observe the rules of the city of Torrance.

- the South Pattern should be stopped, and the North Pattern should be fixed, and monitored.
- please explain why non-TOA-based aircraft should be entitled to use the airport without paying any landing fees. That's benefitting non-resident pilots to the detriment of actual constituent/residents. (And, nice little side benefit, it would bring revenue to the city).
- enforce rules. Ban aircraft/pilots who break the rules consistently. The municipal code has provisions for that (ie 3+ noise violations in 3 years); please use them!

It's fortunate that there are so very many options that can and should be used, for the benefit of Torance residents. Please, stop giving unfair and inappropriate deference to pilots over that of residents.

Thank you. Amy Josefek

To Whom It May Concern,

As a resident of San Pedro since 1996 near Western Avenue and 1st Street I hear and see multiple flights to and from KTOA everyday above my home. They are generally approximately 1000 feet above my home. I also hear motorcycles, gardeners and other traffic from Torrance everyday near my home or on Western Avenue. I personally am not disturbed by it. I do respect those who may be disturbed and understand that there are acceptable standards that should be followed when it comes to privacy and noise. It's a matter of respect and abiding by laws. I have noticed unsightly lighted signs prohibiting motorcycle noise at certain hours and cities certainly have laws about starting work too early in the morning etc. but when It comes to aviation it's not that simple. Please indulge my concerns.

Regarding air traffic safety the FAA has always recognized the "Pilot In Command" as the person in control of the flight. The pilot is in the best position to make decisions regarding the safety of each flight they make. The pilot has extensive training on safety and Federal regulations concerning flight rules and best practice / procedures regarding weather and flight safety. The pilot uses that information to make informed choices regarding safety during flight.

The pilot is extensively trained and licensed to understand and implement Aeronautical Decision Making in a dynamic environment. This process employs many approaches such as 3P, 5P and the DECIDE model to name a few. Safe flight requires Situational Awareness, Risk Assessment / Mitigation and Resource Management skills honed by experience and training to ensure maximum safety during every flight and to effectively reduce or eliminate risk factors.

Neither the City or Residents are in a position to make these important choices or decisions from the ground nor should they try to do so. The real compromise of flight safety are attempts to censor flight beyond what has traditionally been accepted as best practice. The FAA has throughly evaluated these concerns for each airport. They do so from a position of experience, expertise and extensive research. The FAA is the only agency truly qualified to enforce flight restrictions or make rules for pilots.

Noise abatement is a valid concern and is taken seriously by every pilot. Many pilots are neighbors of airfields and understand that unwarranted noise is a nuisance. Pilots take care to reduce noise over populated areas. They use many techniques to do so. Whenever possible they follow guidelines set forth by cities and attempt to respect and implement them, however; they can not be enforced as law for profound safety reasons.

The idea that pilots don't give consideration to residents and noise abatement procedures is false. The idea that noise from airplanes can be completely controlled without sacrificing safety is false. Standardized instrument approaches have been designated for each airport by the FAA. They include: approach route, speed and altitude requirements and are extensively researched, developed and constantly reviewed by the FAA. Likewise pattern altitude, direction and course are also carefully established with safety being the number one concern.

These are import professional considerations that can not be arm-chair-quarter backed. Please make your recommendations and realize that pilots will do the best to accommodate them. Just remember that laws and procedure can not be fashioned without considering the important requirements of flight safety. These are the realm of the FAA. I believe that any effort to enforce flight rules would be the jurisdiction of the FAA.

The Torrance Municipal Airport is a valuable asset to the Torrance and surrounding community. It provides a wealth of opportunity to youth for STEM and Aerospace training. It is world famous and adds value to every home and life it serves

in Torrance. It is my hope that residents will embrace the airport and work with it to improve it's service to the community. The Civil Air Patrol and Torrance Flight Museum are exceptional resources for those interested in aviation careers.

Please join me in support of Zamparini Field, Torrance Airport!

Sincerely,

James McGivern

I've lived in the South Bay my entire life and owning a home in Torrance, I can attest to the fact the noise from the airport is getting worse and worse, especially since 2020. I am retired, and home as much now as before COVID, so I have heard it change on a daily basis.

The airport seems more like a large regional, even commercial, airport than a small local one. An airport with this much activity should not be in a residential neighborhood, as this one is. I live on the hill, and the close proximity of the planes now allowed is a travesty and ruining the peaceful enjoyment of our homes.

There are many times we have to stop conversation in our home because the planes make it so we can't hear. Times when I can't hear the TV or someone on the phone. And that's in the house with the windows shut. Being outside when the planes fly over the house is intolerable. It wasn't like this before you allowed changes at the airport.

I've read things that tell me you know of the airports' negative effects on the residents who live around it, so I won't get into that. I know that you should have some possible solutions already, and that you've been given possible solutions by others, as well, so I won't get into that.

I will say that I don't understand why something hasn't been done. At minimum, stop the incessant training flights to the west — the worst noise offenders. Get them out of the airport or make them fly a pattern that doesn't disturb residents. Then reduce the noise disturbance from the other planes. Do something. Now!

Why aren't you fighting for us? As our City Council, you should be working for us. Stop the noise that hurts our homelife.

I am a city of Torrance resident and have been for many decades living in the Hollywood Riviera above South High School.

In recent years the quality of life in my neighborhood has been increasingly and unnecessarily impacted by frequent and low-flying aircraft. To fully understand the root causes of this one must study and research all the contributing factors to such a change.

Frequent and low flying aircraft used to be a very rare occurrence but no more. This unacceptable situation has degraded to what it has become today adversely impacting public safety, impacting noise pollution and air pollution for Torrance residents and taxpayers.

Please be aware that the offending aircraft are both fixed wing aircraft and helicopters. Helicopters fly over our homes with greater frequency than ever before including the wee hours of the morning interrupting our sleep. By virtue of the hillside topography itself all of these aircraft are flying much closer to the rooftops of our homes than in the commercial and industrial sections of Torrance below the hillside.

As far as I am concerned, this has been an unacceptable and dangerous situation for far too long. We have been patient awaiting resolution for far too long. My expectation now is that corrective measures are taken by both the City of Torrance and our airport to address and to do so with expediency.

I suggest the City institute and collect landing fees at our airport. This will assist the City with a much needed revenue boost in our city's financially stressed times and hopefully serve as a deterrent to the frequent and offensive touch and go landings circling over our rooftops all day.

We must also understand any adverse impact caused by allowing seven training schools at our airport has contributed to this situation. The circle of flight or left turn loop contributed by such a number of training schools must be fully understood and addressed.

Bottomline, the City must conduct a complete and transparent study of the multiple, adverse contributing causes to this problem and develop a corrective action plan for each. Such a study should be the result of a collaboration of all affected stakeholders. It should be shared with affected Torrance citizens and affected homeowners and other stakeholders till a mutually agreeable corrective action plan is executed. It must be such a plan that not only is transparent to Torrance taxpayers but can be monitored for implementation success using verifiable data. It must be such a plan wherein the affected stakeholders with agreed upon frequency revisit the adequacy of the mutually agreed upon corrective action implementation progress and make tweaks accordingly. We must persist till the desired results are realized.

In this corrective action plan I strongly encourage the City to incorporate a strategy of enforcement with teeth for repeat aircraft offenders and violators of any Torrance ordinances. We need some enforceable City mandates here and not a voluntary approach. Time is of the essence since we have let this situation languish for far too many years.

Thank you for your consideration of my input.

Sandra Holliday

Dear Torrance City Council.

Because of airport noise, I, and many Torrance residents, are very unhappy living in our homes and are seriously concerned about the value of our homes decreasing. While we cannot change this, we know you can.

TOA Changes:

- increased number of private flights small aircraft and jets
- increased number of flight schools and the resulting thousands of repetitive, close-proximity student flights. **Not all of these flight schools are even tenants of TOA; plane ID numbers identify them from Long Beach, Van Nuys, and elsewhere - all using TOA
- pilots not following TMC 51.2.3 e (and the city not trying to continue enforcement of it) and thus flying at lower altitude over homes (particularly those of us who live on the hill)
- a noise complaint system that is difficult and onerous to use

The results of those changes have literally ruined our lives here. (I urge you to read the comments posted on the online petition to hear how people feel. If you have empathy, it will break your heart to hear how miserable this has made people. https://www.ipetitions.com/petition/petition-to-reduce-torrance-airport-impacts-now)

Effects of TOA Changes on Your Constituents:

Can't Hear in Our Homes: The level of noise disrupts in-person conversation, TV, music, phone calls and more. We must stop the talk or TV, wait for the plane to go over, and then resume. Music is altered with the buzz of engines.

At minimum, it sounds like flies buzzing around most of the day. At maximum, it literally sounds like a war zone.

- Windows Kept Closed: We keep our windows closed to try to block the noise. We lose the benefit of good weather and no fresh air. And it costs more to have to use AC or fans.
- Safety Concerns: The chance of an accident may be rare, but flying so frequently, and so close to our homes' roofs, makes us fearful of an accident.

I've had two planes fly directly toward my window and I actually feared for my life. The neighbors above me on the hill have said it happens to them, too.

I've had objects on tables shake when a plane is within close proximity.

I see large shadows of planes through my windows that often scare my pets and me.

- Air Quality Worsened: Flying so frequently, and so close to our homes' roofs, brings the emissions of leaded fuel
- Being Outside is Off Limits: Sitting on patios, working in our yards... all stopped because the noise makes it miserable outside. This is a main reason we live in SoCal and it's been taken away.
- Work has Been Hurt:
 - o Business calls and often, when I teach via Zoom, I can't hear the caller's speech and have to stop them.

 The loud noise, most particularly, the repetitious nature of the student flights (easily one every one to five minutes), impedes your thinking and takes away your focus. When working, I lose time recovering from the plane disruption before I can back to work.

It wasn't this way before the changes...

We saw and heard flights far less frequently, not as loud, and not as close to our homes, so we weren't invaded by the noise. Torrance had its airport. Pilots could fly. And residents enjoyed their homes. If it wasn't this way before; it doesn't have to be this way now.

Please do something. Soon. Very soon. Make this a priority. Please. If changes aren't made, I see this easily going into a "close down the airport" movement. As miserable as I am, I wouldn't care, but I think you would.

Regards, Natalie Brecher Mesa Street Resident

My Name is Robert Laxton. Our family has lived at for sixty-three years. My father was an aerospace engineer for forty years. Our family has attended many events at Torrance Airport.

The recent operations with the seven training companies have created a continuing umbrella of airplane noise over our house. There are several areas of the hill where natural basins (Calle Mayor, Tortugas & Calle De Arboles, Vista Largo) reflect the noise of the airplanes as they turn left and climb over the hill. The noise not only enters our house from the view side; but then radiates into the front side of the house as the airplane exits the area. In the past months, these flights have been active from 8:00 AM to 8:00 PM at night.

In particular, there has been the practice of two to three airplanes following each other around in a "touch and go" sequence. As one airplane exits the area, the following one is climbing into the hill. It is inescapable from inside the house when there is the prevailing western breeze and the airplanes are climbing and then making a 'powered' left turn to exit the area.

Thank you for your consideration,

Robert Laxton

Subject: how airport noise has impacted my life

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

I am very concerned about how low small airplanes have been flying over my home, loop after loop, for a while now. The leaded aviation fuel that is used in small planes emits toxins that cause brain damage, learning disabilities, reduced fertility, nerve damage and death. And in the past two weeks there have been more airplanes flying low. The noise is enervating to me. I can hear the planes going over my house when all of my double-paned windows are closed. On October 22nd I was in Alta Loma Park sitting in beach chairs on the grass six feet apart from my friends from 1:30 to 3:00pm and I could not hear what they were saying because an airplane kept circling low around the park for one hour. I am also concerned about a plane crashing into my house as one did crash into a building in Torrance in 2019 killing one person. To say the least, my quality of life has deteriorated because of these issues.

I have lived in this home for almost 21 years, and this was never the case before. For many years, this was a quiet and peaceful neighborhood. The airplanes flew high in the air and not nearly as often as they do now. Torrance has been my home for over 48 years, but all of the noise is making me seriously consider looking for another quiet neighborhood away from the Torrance airport or to a city beyond. Please help! Thank you for considering my feelings in this matter.

From: Hydee Ong < Sent: Monday, October 31, 2022 4:47 PM

To: Council Meeting Public Comment < Council Meeting Public Comment@TorranceCA.gov>

Subject: Nov. 8 Airport agenda item

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

My name is Hydee Ong and I have lived in Torrance for over 20 years. I've made numerous complaints to Noise Abatement over the past year (too many to count). We need a way to ENFORCE EXISTING LAWS. I know most pilots follow the rules, but there are MANY who don't. When my family can't have dinner conversations without closing the windows because of airplane noise, it's a problem. When I have to close my windows during a work call due to airplane noise, it's a problem. When airplanes fly so low that the noise reverberates throughout my house, it's a problem. Why is the city not enforcing the rules? Why are the rights of tax-paying, Torrance voters secondary to flight schools and pilots, many of whom do not reside in Torrance?

STRICT ENFORCEMENT IN GENERAL

Voluntary measures are OK, but enforcement is better. Whenever possible, the City should strictly enforce its existing laws. Most pilots will follow airport recommendations, but there will always be some who don't. Most of the problems are probably caused by a small minority of pilots. The Torrance Airport Association cannot guarantee that all pilots will follow the recommended practices. So enforce rules wherever possible.

PROCESS

The pilots recently made a presentation before the Airport Commission. They hadn't sought input from non-pilot residents before coming up with their recommendations. They used limited data they constructed themselves to support their arguments. It's time for the City to put residents' needs over pilots'.

TRAINING IN THE SOUTH PATTERN is a big problem. Given that 60% of the airport's operations are training, it's becoming untenable. This was not allowed in the past, why is this allowed now? The city's NO-LEFT turn rule that was put in place in the 1950s helped TOA and the Community to coexist. This is no longer the case.

Furthermore, the city is not following its own MUNICIPAL CODE SECTION 51.7.3 which states that any aircraft that has violated 3 or more noise violations within a 3-year period will be denied the use of TOA. Why the non-enforcement? Why are the needs of pilots, many of whom are non-Torrance residents, a higher priority over tax-paying residents? This is a problem.

LANDING FEES

Currently the airport has no landing fees. Non-TOA-based aircraft are allowed to use the airport free of charge. In October of 2020, staff reported that landing fees could bring in an estimated net gain of \$257,000 to \$642,000 annually. It would also be a way of spreading the cost of the airport more fairly

among all users. It might also have the added benefit of reducing the excessive amounts of touchand-go training. The City should reconsider landing fees.

CASPER QUESTIONS FOR STAFF

I have some questions. The City's Municipal Code says aircraft taking off to the West shall not turn left until reaching the ocean or an altitude of 1,500 feet. The new Casper system has been operational since August 15, 2022. I understand it identifies early-left turns and flags them for staff to investigate and follow up. So, how many of them were departures and how many were planes training in the South Pattern? Could the Council ask staff to respond to these questions?

EXCLUSION OF VIOLATION-PRONE AIRCRAFT

Currently the City does not follow its own Municipal Code Section 52.7.3, which states that any aircraft that has committed three or more noise violations within any three-year period shall be presumed to be a noisy aircraft and will be denied use of the airport. The City should strictly follow the Code.

LEASES TO TRAINING SCHOOLS SHOULD REQUIRE COMPLIANCE

Impacts from training have become intolerable. Especially in residential areas south of the airport. The City says, "Training in the South Pattern is discouraged to lessen impact on noise sensitive areas." On some days, there are well over 50 flights in the South Pattern. Noncompliance is commonplace. Flight schools based at the airport should be required to comply with the City's noise abatement recommendations as a condition of their leases. If they don't comply, their leases should be revoked.

BAN THE SALE OF LEADED FUEL

Most of the planes and helicopters at the airport use leaded fuel. Leaded gas was banned from vehicles and paint a long time ago because of its toxic effects, and it's especially harmful to the development of children. Yet the FAA has allowed it to continue to be used in aircraft which fly over our homes and schools and dump lead in the air we breathe. This has to stop. If the FAA won't do it, the City should. The County of Santa Clara recently banned the sale of leaded fuel at its airport. The City of Torrance should, too.

Sincerely,

Hydee Ong Mesa Street resident

My name is Donald and I live in Torrance.

Training at TOA is a huge problem that needs to be fixed NOW.

The number of flights has ballooned out of control, just look at the numbers. Weekdays average over 400 flights a day. That is nearly one flight per minute for 10 straight hours.

7 flight schools, multiple aircraft per flight school, and multiple flights per aircraft equals constant noise and the degrading of our quality of life. I have tracked one aircraft from a TOA flight school which circled my house 25 times in one day. 25 TIMES!

And what has been done? Nothing.

Stop all touch-and-go training and implement a landing fee!

Why has this not been implemented? This isn't reluctance on your part, this is straight refusal to help your constituents.

Thousands of complaints have gone unheard. Literally, thousands.

The airport has been so severely mismanaged it is no longer an asset but a liability.

When are you going to take into consideration your constituents?

RE: TORRANCE MUNICIPAL AIRPORT & INCREASED FLIGHT SCHOOL ACTIVITY

The traffic with light airplanes has increased enormously this year. It is normal that we count 50 takeoffs, which is roughly a flight in the air every 4-5 minutes. It is extremely disturbing for us working from home due to the pandemic and are depending on Zoom communications, which we must cease during flyover. We have lost our good quality of life as a basic right. I've lived on the same address for the last 30 years and never experienced low flying planes over our roof, which is not only disturbing but also dangerous. Why has the take-off pattern changed? It used to be that all aircrafts make a right turn on Hawthorne Blvd. We are worried to hear a plane crash during a little league baseball game at Lago Seco park. Please, we are at a point when we cannot take this anymore!!!

Thank you.

October 31, 2022

To: Mayor and Council

From: Riviera Homeowners Association

Re: Aircraft noise

Good morning, Mayor Chen and Council members,

I am writing today on behalf of residents of the Riviera area of south Torrance, who are impacted more than any other group by the increase in airport noise from TOA.

The increase in noise first became noticeable in 2019 when the City Attorney stated that "in an abundance of caution" the City would not fight an accusation that the City was breaking the law by prohibiting planes from turning left on departure. Since that time, planes have been allowed to turn left at takeoff. This is an unfortunate decision by the City because first, it is written in the TMC section 51.3.2 that departing planes must reach 1,500 feet or the shoreline before turning left. In addition, this regulation was grandfathered into the current Municipal Code because it was pre-ANCA, (before 1990) a fact which the FAA never mentions in their correspondence with the City.

The response to Mr. Gates' letter from the FAA in Feb. 18, 2020 did not mandate or require the City to allow planes to turn left. In fact, Ms. Peters, Counsel for the Regulations Division stated"local governments that own or operate an airport are not prohibited from carrying out their proprietary powers and rights. The airport owner has authority to ... reasonable, ... regulations addressing aircraft

noise and appropriate local interests." She goes on to say that the FAA does have the responsibility to control "aircraft in flight."

When pilots are preparing to depart, they know where they want to go, but they are not yet in flight. If they get a go-ahead from the tower to go straight or turn right, they are not being controlled while in the air. I respectfully ask the City to reconsider their decision, to enforce the TMC as written, and let the pilots bring legal action against the City if they wish. We do not think the pilots have a valid case against the City, and residents want their city government to fight for them. Of course, the funds for any legal action could come from the Airport Expenses Fund, not the General Fund.

The situation on the ground became noticeably worse after the City decided not to restrict planes from turning left, but it became exponentially worse in the spring of 2020, when the CDD decided to allow training flights to also turn left. This decision was made without public input or a council hearing. Training flights have not been allowed to turn left at takeoff for about 40 years. Not only are the flights often lower than 1,100 feet, they are much louder and more frequent, since they travel around and around the airport doing touch and goes.

My family has lived in the same home in south Torrance since 1986, and we never experienced airport noise inside the house prior to 2019. This year has been the worst.

According to the graphs which Airport Commission Chairperson Anne O'Brien shared during a Commission meeting earlier this year, the Torrance airport is on track to log in about 180,000 operations from the airport this year. 100,000 of these flights (60%) will be from training flights.

There are also safety reasons why training flights have never previously turned left at takeoff. The early left turn brings new pilots over a densely populated suburban area with rising terrain (a 400' hill).,

The flight path goes directly over South High School, Richardson School, Walteria Elementary, and Walteria Park. The students and children in these areas are, just like the residents, in the path of neophyte, student pilots who could have a mental lapse or a bad day and lose control of their airplane. There is a small chance of accidents, but if there are 180,000 operations a year, the odds are that there will be some incidents. The residents and children are also exposed to the

leaded fuel which many of the planes (around 40%) are still using. The most persistent problem is of course, the noise from planes circling overhead.

For all these reasons, I respectfully ask the City of Torrance to enforce their "no-early-left-turn rule" and not allow flights to turn left at takeoff from TOA. The City would be a better place to live, and the residents would appreciate and respect council for taking these steps.

Judy Brunetti, co-president Riviera Homeowners Association

Dear Dave Roelen,

We appreciate and value your input on what would make Torrance a better place to live, work and play. Thank you for your email.

Please know that the General Services Department will be bringing forth a discussion item to the City Council in the near future as related to a potential temporary moratorium on allowing additional flight schools at the Torrance Municipal Airport. As I'm unsure of the timing for the item, I would encourage you to review upcoming City Council agendas at http://torrance.granicus.com/ViewPublisher.php?view_id=8. Additionally, staff will be presenting an update to the City Council at their November 8th meeting as related to the Noise Abatement program and Airport operations. This agenda item should be available for review during the week of October 31st on the City's website, which again is http://torrance.granicus.com/ViewPublisher.php?view_id=8. Should you have any additional questions, please feel free to contact Community Development Director Michelle Ramirez at MRamirez@Torranceca.gov.

Also, should you wish to learn more about the City's goals and resources in other areas, please find the attached information sheet.

Thanks again,

Alina Gonzague

Subject: Torrance Airport Training Noise and Safety

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

My name is Dave Roelen

I staffed the Torrance Airport Noise Abatement Office for many years starting in 1979, and am very familiar with the airport noise history. During that time, and until very recently, there was NO flight training permitted in Torrance's south pattern. None! Straight out to the shoreline has always been the Torrance Airport Noise Abatement departure route from the south runway.

What we have today is a simple decision by pilots and newly based flight schools to knowingly go against long-established City of Torrance noise abatement procedures. Pilots and flight schools are **requesting** turns and training in the south pattern. The decision to turn or train in the south pattern is <u>made solely by pilots</u>. They are <u>not</u> being directed to do so by the FAA. This is not an FAA domain issue. It is a pilot's request and their own disdainful decision.

Flight schools and pilots (and those aircraft) requesting turns should be held accountable for ignoring long-standing Torrance Airport Noise Abatement procedures and should be denied the <u>privilege</u> of using Torrance Municipal Airport, property owned by the people of Torrance.

Newly arrived flight training schools with City of Torrance property leases, and non-based flight schools, are causing this major noise problem with unsafe, low, climbing turns by novice pilots, straining noisily for altitude toward rising terrain and over once peaceful residential homes.

If Torrance City Council feels incapable of taking corrective action against holders of City of Torrance airport leases and of pilots who refuse to cooperate, the City should immediately implement other options. To help correct such flagrant violation of Torrance's standards and citizen wishes, and to defray airport costs (especially for Airport Noise Abatement), landing fees for all aircraft should be imposed (except, perhaps, for those non-FBO, based hangar lease holders).

Every airplane (by registered owner) that lands on Torrance's airport runway property should be subject to an escalating landing fee schedule similar to the following:

- 1. The first landing within a 24-hour period (midnight to midnight) would be free.
- 2. The second landing (including a touch and go) would be charged, say, \$50. A third landing and all landings thereafter (including each touch and go) would be charged \$100 for each and every landing on runways owned by the City of Torrance.
- 3. The FAA registered airplane owner would be automatically billed. If payment is not made that aircraft would be permanently prohibited from using Torrance's airport.

The City of Torrance might also consider these additional options:

- 1. No touch and go operations from runway 29L/11R (& no left turns from runway 29R).
- 2. No touch and go operations on Saturday, Sunday, and holidays.
- 3. No touch and go operations at Torrance Municipal Airport.

If pilots and flight schools continue to request south departures or training from runway 29L/11R, contrary to published Torrance Airport Noise Abatement flight procedures, deny them and the aircraft the privilege of using Torrance's airport, and revoke airport leases for all non-compliant flight schools based on Torrance's municipal airport property. This is City of Torrance property and pilots either follow our City rules or they are permanently prohibited from using it.

To: Council Meeting Public Comment < Council Meeting Public Comment @ Torrance CA.gov >

Subject: Stop Torrance Airport Noise and Enforce No Left Turn Rule

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Dear Honorable Mayor Chen and City Council Members,

We live at the top of Vista Montana and Paseo De Las Tortugas and have owned our home for 24 years. Our backyard has a view of Torrance Airport which has always been fun for us as my husband, and I have worked in the Aviation Industry for over 30 years. My husband is a licensed pilot and I have worked around commercial aircraft my whole career. Needless to say we enjoy airplanes, flying, & traveling.

Up until several months ago the aircraft flying from Torrance airport above our home was not an issue nor bothersome. However, things have drastically changed, and something needs to be done. Aircraft are flying dangerously low over our home and it's not safe. I video these aircraft on a daily basis and when I show friends, they are very concerned. Our home, being located at the top of the hill, is residing at 125 feet above ground level. Torrance pattern altitude requires 1500 feet altitude. Aircraft are flying at best a few hundred feet above our home which equates to 500 feet or lower! This is unsafe and with the aircraft flying at low altitude the aircraft engine noise is extremely loud. Sometimes the aircraft noise is louder than our TV! I work from home and while on conference calls my clients ask me if I am sitting at an airport. My backyard has become the 405 of the sky with aircraft not adhering to altitude flying rules which are in place for the safety of homeowners. Pilots are quickly turning left when they aren't supposed to in order to perform more touch and go's for their logbook. This is similar to automobiles speeding to get to their destination faster—which as you know is very dangerous and against the law.

Torrance City Code states, when aircraft are taking off to the west a No LEFT Turn until reaching the ocean or an altitude of 1500 feet is in place. Why is this city code not being enforced? Is this the reason why aircraft flying over our home is now an issue? Why would this code not be in affect for training operations? Why is the city of Torrance allowing pilots to not follow the rules and as a result impacting the daily lives of Torrance residents? Torrance needs to enforce existing rules for the safety of its residents and restore order in the sky above our homes.

I am asking you to immediately address this situation and provide assurances you will maintain what once was a safe living environment with aircraft noise abatement for homes residing near Torrance airport.

Regards,

Terry and Kevin Eastley

The only reason to visit California is to visit individuals who have not left yet. You make it easier and easier each time an airport is closed to decide not to visit. Landing is usually a \$1000 minimum in Jet-A fuel. I would ask politely that you stop closing places to land in Southern California.

Subject: AIRPORT ISSUES

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Dear Mayor Chen and Members of the City Council of Torrance,

My name is Griselda Sasayama and I live in the Torrance/Hollywood Riviera.

It is not a rare occurrence to have small aircraft flying over our home in different directions every couple of minutes or so. Last Sunday, I counted six airplanes within ten minutes! The noise is loud enough to distract from business and casual conversations for those in our family who work at home and our garden, or who just seek comfort and relaxation within our own backyard. Add to this noise the amount of air pollution and the feeling of not-so-safe skyes that we increasingly experience and you can see how the quality of life in our beloved city is deteriorating. Torrance has undergone significant un-healthy and un-safe changes since we chose it as our home and raised our young family here.

Specifically, I would like to call your attention to the level of NOISE POLLUTION, AIR POLLUTION and AIRCRAFT ACCIDENT RISK hoping that the new administration in place takes prompt action in regards to the disturbing increase in air traffic originated by the Torrance Airport. Some, but not all options to consider are the following:

- 1. Limit flight training schools by selecting the very best ones.
- 2. Manage the number of flights by reconsidering landing fees. The revenue could be used for proper training in regards to the rules in place, scholarships for flying school, enforcement of protocols, or other.
- 3. Limit training flights to least populated areas only, as it was before recent times.
- 4. Ban the use of extremely unhealthy leaded fuel.
- 5. Install noise monitors throughout the affected neighborhoods outside the airport.
- 6. Require compliance at all levels and charge monetary fines or ban violation-prone aircraft. Fees could be used to cover enforcement costs.

Griselda Sasayama

To Whom It May Concern:

Torrance, and the surrounding area, greatly benefits from Torrance Airport and the additional economic activity the airport generates. The airport increases access to the city and its businesses, and has been in successful operation for decades.

Now, a small but vocal minority of residents resent having bought property close to the airport AFTER the airport had been in existence for quite a while. That minority would like to see the airport closed, which would be to the detriment of the majority of residents. On balance, the factors in favor of a public use airport significantly outweigh the factors in favor of closure. In fact, the minority of residents fail to state a clear reason for closure other than "I don't like it." That's not a valid reason. The city has accepted federal grant money in regards to the airport, and is obligated to follow grant obligations. In addition to the consideration above, this renders the minority's suggestions moot:

- 1) Closing the airport and reopening it as a private airport would violate grant obligations and expose the city to significant fines
- 2) Pilots' requirements to ensure safety of flight overrides any noise abatement procedures. The city would be on very shaky legal grounds should it change its noise "enforcement" procedures. Furthermore, the money could be better spent elsewhere, such as on a AWOS system for the airport.
- 3) The city cannot enforce any "no left turn" rule. Federal law overwrites local law, and the FAA has clearly stated that the city may not impinge on its rule-making authority.

Best,

Felix Morio

Hello,

I learned to fly in SoCal and made many flights into Torrance. Torrance airport is a key reliever airport for general aviation from Long Beach and Hawthorne. Closing the airport will also result in Robinson moving and losing jobs.

The value the city receives from the airport is far greater than the vocal minority complaining about their home values.

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

My name is Margherite Vetrano and I live here in Torrance. My neighborhood falls under Councilmember Mr. Mattucci and we implore him to work for us and support us to make the much needed changes at Torrance Airport. The airport noise isn't just plaguing my neighborhood, it's plaguing many neighborhoods here in Torrance and we need the airport noise to STOP. It's also shameful to schedule a Council Meeting on Election Day. It's evident to many of us that this Meeting with such an extremely important topic was scheduled on Election Day to avoid an overwhelming turnout from the residents. It's shameful.

Here are a number of items you must consider:

- 1 voluntary measures are OK, but enforcement is better. Whenever possible, the City should strictly enforce its existing laws. Most pilots will follow airport recommendations, but there will always be some who don't. Most of the problems are probably caused by a small minority of pilots. The Torrance Airport Association cannot guarantee that all pilots will follow the recommended practices. So the rules must be enforced.
- 2 currently the airport has no landing fees. Non-TOA-based aircraft are allowed to use the airport free of charge. In October of 2020, staff reported that landing fees could bring in an estimated net gain of \$257,000 to \$642,000 annually. It would also be a way of spreading the cost of the airport more fairly among all users. It might also have the added benefit of

reducing the excessive amounts of touch-and-go training. The City should reconsider landing fees.

- 3 currently the City does not follow its own Municipal Code Section 52.7.3, which states that any aircraft that has committed three or more noise violations within any three-year period shall be presumed to be a noisy aircraft and will be denied use of the airport. The City should strictly follow the Code that has been set.
- 4 training in the South Pattern is a big problem. There is more training now than ever before. About 60 percent of the airport's operations are training and much of it is done in the South Pattern. In the past that was not allowed. The City's no-left-turn rule was designed in the 1950s to keep planes from taking off low over quiet residential neighborhoods on higher ground. Instead, planes trained in the North Pattern over commercial/industrial areas on lower ground. That's the way it should be.
- 5 there are 7 training schools based at Torrance Airport. That's too many. The number of training schools should be limited. The City needs to reduce that number. Mr. Mattucci suggesting a moratorium on Training Schools is NOT enough.
- 6 impacts from training have become intolerable. Especially in residential areas south of the airport. The City says, "Training in the South Pattern is discouraged to lessen impact on noise sensitive areas". On some days, there are well over 50 flights in the South Pattern. Noncompliance is commonplace. Flight schools based at the airport should be <u>required</u> to comply with the City's noise abatement recommendations as a condition of their leases. If they don't comply, their leases should be revoked.
- 7 currently planes or pilots with multiple violations are sent to City hearing boards for adjudication. This a lengthy and time-consuming process. Three hearings with guilty verdicts are required before a plane or pilot is banned from the airport. Santa Monica Airport uses a system of progressive monetary fines. For 2018, Torrance's violation rate was 7 times higher than Santa Monica (4.2 violations per 1,000 operations vs 0.6 violations per 1,000 operations). Their enforcement method is far superior at gaining compliance. The City should look into changing its method of enforcement to monetary fines. Santa Monica's fine structure of a warning for the first infraction, followed incrementally with \$2,000, \$5,000 and \$10,000 for each subsequent violation (with the fifth offense carrying a

suspension or revocation of privileges or permits), adds revenue and acts to reinforce the incentive for "friendly flying.

8 - most of the planes and helicopters at the airport use leaded fuel. Leaded gas was banned from vehicles and paint a long time ago because of its toxic effects, and it's especially harmful to the development of children. Yet the FAA has allowed it to continue to be used in aircraft which fly over our homes and schools and dump lead in the air we breathe. This has to stop. If the FAA won't do it, the City should. The County of Santa Clara recently banned the sale of leaded fuel at its airport. The City of Torrance should, too.

9 - the pilots recently made a presentation before the Airport Commission. They hadn't sought input from non-pilot residents before coming up with their recommendations. They used limited data they constructed themselves to support their arguments. It's time for the City to put residents' needs over pilots'. The City needs to start doing their jobs and support the residents in this community.

Thank you.

Subject: Torrance Airport Noise/ Environmental Impacts

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Dear Council Members & Mayor,

I'm writing tonight to ask you all to please take action regarding the increasing noise, pollution, and air traffic at Torrance airport.

When my husband and I moved into our house across the street from Richardson Middle School twenty years ago, noticeable noise from aircraft was intermittent at best. We occasionally heard Robinson's helicopters, the Goodyear Blimp on its way to the beach, and one jet that took off from Zamperini Field on Sundays or Mondays. It was rare to see a prop plane over our backyard. The noise of parents honking during school pick up was louder.

As of this year, that is no longer the case. While parents are still honking, it only lasts about 15 minutes a day. The noise of aircraft starts at 7:30 AM and continues all day long. On sunny days, a plane will go over my yard every minute or two from 10 AM-2 PM, at fairly low altitude--often not much higher than the hill bearing the white "S" for South High. Some make the early left turn to the west of my house, some make the turn to the east of my house, and some turn directly over my yard. Even if I go inside and shut the windows, there is no way to block out the constant buzzing. I've had literally hours of planes going over every few minutes in the evening as well. It's incredibly frustrating to have the nonstop noise, especially when one of the reasons we bought and love our house is for the patio and big backyard. I am sure the noise is not going to help our property value, either.

It is also concerning to me, as the parent of a TUSD student, to learn that Torrance Airport still allows leaded fuel. The Environmental Protection Agency recently acknowledged that leaded fuel for aircraft is a significant problem: "Aircraft that use leaded fuel are the dominant source of lead emissions to air in the country," EPA Administrator Michael Regan said in a statement. "Exposure to lead can cause irreversible and lifelong health effects."

EPA targets lead airplane fuel, citing children living near runways

The EPA said Friday that it was proposing to declare emissions from piston-engine aircraft operating on leaded ϵ

The same aircraft flying over my house are also flying over South High, Richardson Middle School, Calle Mayor Middle School, and Walteria Elementary, exposing schoolchildren to lead emissions. The increase in flights means a corresponding increase in lead emissions--right over Torrance Schools. I was shocked to learn that the City Council has not already moved to ban leaded fuel at Torrance Airport in order to protect Torrance residents--especially children.

I would like to see our City Council take some of the same steps taken by Santa Monica to mitigate similar issues at their airport: charge landing fees, close problematic runways, ban leaded fuel, and fine problematic pilots. I'd like to see the city of Torrance take whatever action is necessary to keep pilots from flying over my yard at their current low altitudes (preferably before a pilot crashes into the hill).

I am pleased to see that Torrance City Council is finally at least addressing the airport issues in a public meeting, but disappointed that the Council has not been proactive in protecting Torrance residents from noise pollution and lead pollution.

I hope you do better in the future. You can start by holding public hearings and listening to your constituents.

Sincerely,

Catherine Modesitt

Subject: Airport noise abatement needs

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Councilmembers,

I may be late, but I want to express my opinion that the increased noise from the Airport is not acceptable.

I have noticed that we get more noise from the airport recently, and I do not like it in general and specifically, i have issues with the loud noise that interrupts activities, even indoor. I have read that there are options to help mitigate the noise and also the cause of the increased noise, that could actually benefit the city as well as keep the citizens happy.

Please make every effort to abate the noise coming from the airport.

Thank You, Tracey Nakadate

East Hampton's plan to cut airport noise runs Into FAA trouble

By: Skylar Woodhouse and Amanda Gordon | Feb 03 2022 at 06:16 PM | Air Cargo

The wealthy resort town of East Hampton on New York's Long Island said it's restricting traffic at its airport even as the Federal Aviation Administration warns of obstacles that may slow the process down.

The town's board last month voted unanimously to deactivate its airport at the end of February after residents have complained about noise for years, objections that have grown as ride-share apps make helicopter and plane travel easier. The plan was to reopen it as a more limited-use facility on March 4, where pilots could land only with prior permission.

In a letter dated Wednesday, the FAA said that once the facility is deactivated, it will lose key attributes of an airport. For example, all FAA-operated navigational, weather, and communication aids will be disabled, the agency said. The regulatory agency will also need to analyze the airspace, and how its use will affect people and property on the ground and how it will affect the broader airspace structure.

There may also be an environmental analysis it has to do. These efforts may take about two years to sort out, the FAA said in its letter.

In a statement on Thursday, the town board said it has told the FAA that if the agency doesn't allow the airport to use an air control tower and other navigational aids, East Hampton will open a simpler airport without such amenities instead in March.

The town also said that the FAA has never suggested that the East Hampton Airport and its airspace and instrument procedures are unsafe.

"It is noteworthy that the FAA never once in its letter states that the new private use airport will not be available on March 4," according to the statement. "The Town remains confident that it will open on that date and looks forward to ushering in the new chapter of aviation in East Hampton that is consistent with the concerns that have been raised by so many in the community."

East Hampton residents have complained about air traffic noise for at least a decade, even before ride-share apps made it easier for people to snag seats on helicopters and airplanes. The town board has been working with consultants, residents, and others to figure out its options.

Noisy Wall Street Helicopters Spur East Hampton to Shut Airport

The arguments over air traffic pit many of the town's wealthy residents, who might drive to East Hampton from Manhattan or live there year round, against the ultrawealthy, who fly in, said Mitchell Moss, a professor of urban policy and planning at New York University. Litigation may result, as residents of the town use their money to sue the federal agency, he said.

"This is the 1% vs. the 0.1%," said Moss, who about a decade ago was commissioned by a northeast U.S. helicopter trade group to write a report about how the town benefitted from the airport. "This is a litigator's dream, because you have very wealthy voters based in the town who will do everything to take on the FAA."

Nov. 8 Airport agenda item

From: Mary Cilva <

Sent: Wednesday, November 2, 2022 12:58 PM

To: Council Meeting Public Comment < CouncilMeeting Public Comment @ Torrance CA.gov>

Subject: Nov. 8 Airport agenda item

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Honorable Mayor Chen and City Council Members

My name is Mary Cilva and I have lived in Torrance for over 60 years. The recent significant increase in airport traffic has completely ruined the quality of life for me and my husband. This MUST change immediately! We cannot sit outside and enjoy our front porch or back patio due to the constant noise of airplanes flying very low over our neighborhood.

My key points of complaint are as follows:

Noise monitor locations

The City's Code limits aircraft noise (to 82dB maximum or 88 dB Senel) everywhere outside the airport boundaries. But the City has only seven noise monitors, and they are spaced evenly around the airport. There are large gaps of about a half mile between them. Pilots can easily fly through the gaps and avoid the monitors. Even though they exceed the noise limit on the ground below them, they avoid getting detected by the noise monitors. The City should at least add more monitors on the West side of the airport so that more violations will be detected.

Eliminate flight training schools

There are 7 training schools based at Torrance Airport. There should not be any flight training over a heavily populated area like Torrance. I would like to see all of the flight schools shut down permanently.

Ban the sale of leaded fuel

Most of the planes and helicopters at the airport use leaded fuel. Leaded gas was banned from vehicles and paint a long time ago because of its toxic effects, and it's especially harmful to the development of children. Yet the FAA has allowed it to continue to be used in aircraft which fly over our homes and schools and dump lead in the air we breathe. This has to stop. If the FAA won't do it, the City should. The County of Santa Clara recently banned the sale of leaded fuel at its airport. The City of Torrance should, too.

Process

The pilots recently made a presentation before the Airport Commission. They hadn't sought input from non-pilot residents before coming up with their recommendations. They used limited data they constructed themselves to support their arguments. It's time for the City to put residents' needs over pilots'.

Thank you for listening to these serious concerns regarding the airport. My husband and I (as well as my neighbors) look forward to a swift response to these problems impacting all of the residents of Torrance.

Thank you.

Mary Cilva

Subject: Public Comment

WARNING: External e-mail

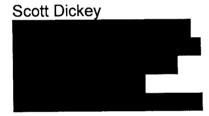

Please verify sender before opening attachments or clicking on links.

I'd like to submit a public comment for the November 8th City Council meeting:

I'm writing to oppose the petition of the RHA (Riviera Homeowners Association) that proposes to turn the Torrance airport into a private airport or otherwise restrict its use. General Aviaiton airports like Torrance are part of the community and provide many economic and public safety benefits. I support reasonable accommodations to the surrounding community to mitigate noise but I believe the basic function of the airport needs to be preserved.

WARNING: External e-mail

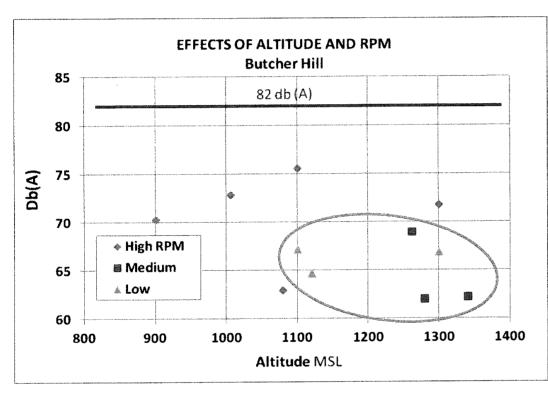

Please verify sender before opening attachments or clicking on links.

During the week of 10/18 to 10/21, we invited members of Torrance City Council to discuss the many actions currently underway at Torrance airport in order to minimize the impact of its operations on the surrounding community. Mayor Chen and Council Members Lewis, Kalani, Griffiths and Sheikh accepted. Council Member Kaji was out of town until 11/1 and we will meet with him on 11/3. Council Member Mattucci did not respond to our invitation. Attached is a copy of our presentation and handouts.

Peter Broen, Torrance Airport Association President Jim Gates, Torrance Airport Association Past President

Sling Noise Test Results

This test found that reducing propeller RPM was much more effective at reducing noise than increasing traffic pattern altitude.

The Sling NGT aircraft, when flown according to Academy policy, is very quiet.

Details about this test can be found at: torranceairport.org/facts/

Noise Reduction at Torrance Airport

Noise from airport operations cannot be eliminated, but it can be minimized

11/8/2022 Peter Broen, TAA President Jim Gates, TAA Past President

Background

- Until recently, training pattern work has mainly taken place on the north runway.
- More recently, a substantial increase in training resulted in a north training pattern that has often become saturated and controllers have had to send aircraft to the south pattern.
- The recent uproar concerning increasing traffic in the south pattern is not about excessively noisy airplanes. The complaint is about frequency of the noise; the amount of traffic.
- Many neighbors have a basic misunderstanding about how airports work

Our Messages

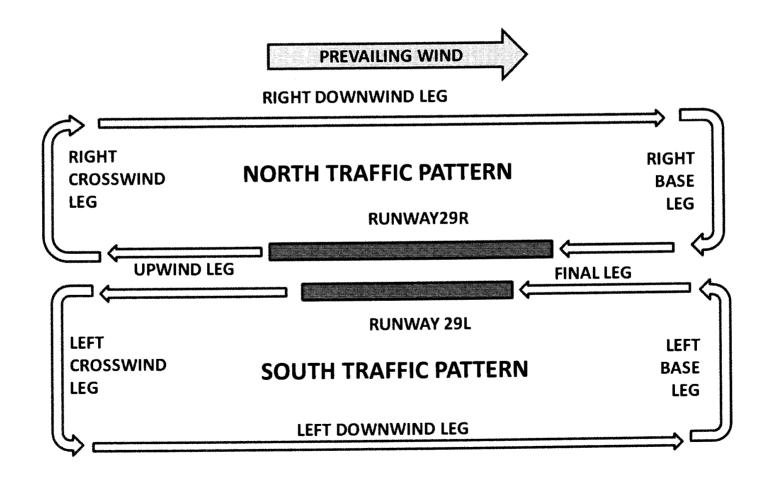

- Successful noise reduction requires voluntary pilot participation
- Aviation community is leading noise reduction efforts at the airport
- TAA supports noise reduction
- Torrance pilots are not the "bad guys"
- The City needs to take an active role in disseminating correct information about the airport to the community

X

Terminology

TORRANCE AIRPORT TRAFFIC PATTERN

Quiet Procedures for 29L (VFR Only)

- After takeoff, climb at maximum safe rate
- Reduce RPM crossing Hawthorne*
- Climb to pattern altitude and reduce
 RPM prior to turning to cross wind leg*
- Use minimum RPM in down wind leg*

* Lower power aircraft may be unable to do this safely, but they are much quieter

 $\tilde{\infty}$

The Guidelines

- Flight safety is paramount
- Torrance has valid community noise limits
- Flight paths, altitudes and operational procedures cannot be mandated by City
- Pilots MUST obey the Federal Aviation Regulations (FARs).
- Pilots' voluntary use of quiet procedures is key to success

Our Efforts—Flight Schools

Sling Pilot Academy

- Selected modern <u>quiet</u> trainer: Sling NGT
- Their Rotax engines use unleaded auto fuel
- Academy teaches quiet techniques; mandates their use
- Use north pattern for landing practice whenever possible
- Performed flight test: higher pattern & lower
 RPM (64-68 dbA for quiet procedures)
- Looking for continuous improvement (flight testing; airframe & engine modifications, operational processes, etc)
- Participates in pilot survey

Our Efforts—Flight Schools

South Bay Flight School

- Teaches quiet procedures
- Does not permit use of south pattern
- Participates in pilot survey

Individual flight instructors

- Some participate in pilot survey
- More outreach is needed—
 communication is more difficult

_

Our Efforts—Robinson Helicopter Company

- Negotiated quiet routes for approaching & leaving TOA
- Requires owners to follow these routes when transiting to/from TOA for periodic training
- Make only direct arrivals and departures to south runway
- All landing practice is at north helipad and uses north helicopter pattern

 $\ddot{\sim}$

Our Efforts--TAA

- Redesigned attention-getting runway signs to better relay quiet procedures to transient pilots (awaiting staff approval & installation)
- Recommended changes to noise abatement brochure to better communicate to pilots (awaiting staff approval & distribution)
- Recommended changes to "no left turn" letter to remove dangerous wording, elicit voluntary compliance & conform to Federal Laws (awaiting staff approval & use)

(More)

Our Efforts—TAA

- Performed noise flight testing with Sling NGT, Cessna & Decathlon
- Briefed Airport Commission & community on our noise reduction efforts (9/9/2022)
- Surveyed Torrance pilots on quiet procedures (September 2022)
- Regularly analyze complaints and violations; provide report to Airport Commission & public (quarterly)
- Regularly reach out to pilot community and airport neighbors with e-mails & web-based information (www.torranceairport.org/facts/)

Our Efforts—Individual Pilots

- Pilot survey results (September 2022):
 - Surveyed over 600 Torrance pilots
 - Only 43% have used the south pattern in the past 30 days; of those that do:
 - 80% use maximum safe climb rate after takeoff
 - Over 60% climb on runway heading and reduce RPM prior to making cross wind turn*
 - 64% use minimum safe power on down wind*
 - * Lower power aircraft may be unable, but produce much less noise
- About 25% of the pilots using the airport are not based here (Long Beach, Fullerton, Hawthorne, Santa Monica. . . .)
- TAA can assist in outreach about quiet procedures

Torrance Airport Torrance Airport Association

Petition

- "Therefore, the undersigned residents of Torrance and adjacent cities, petition the Mayor and City Council to:
- Hire outside counsel with expertise in aviation law to identify and evaluate options that
 may still be available to reduce the airport's environmental impacts (e.g., charge
 landing fees, close south runway, resume enforcing early-left-turn law, prohibit sale of
 leaded fuel, etc.) and to defend the City against any legal challenges;
- Pay the City's legal expenses from the City's Airport Fund, not from general taxpayers;
 and
- Hold public hearings to discuss and consider all legally available options."

This is a clear indication that:

- the City needs to support current efforts by TAA, flight schools and pilots to minimize noise from airport operations;
- •the City needs to provide the community with a clear picture of the laws that regulate aviation in the U. S. and at Torrance Airport; and
- •the city needs to emphasize & enforce real estate disclosure requirements

What Do We Need?

City staff:

- Approve, manufacture, and install recommended runway signs
- Relay to the public:
 - Efforts by pilots, flight schools, Robinson and TAA to reduce noise
 - Legal limitations on City authority
 - The reality of airport operations (altitudes, traffic patterns)
- Enforce real estate disclosure requirements

Noise Abatement:

- Rewrite, publish, and make available new brochure material
- Correct "no left turn" letter & website
- Provide information about airport traffic patterns and the affected areas on website

City Council:

 End public confusion about applicable laws by repealing invalid and unenforceable TMC sections: 51.2.2, 51.2.3 and 51.2.19

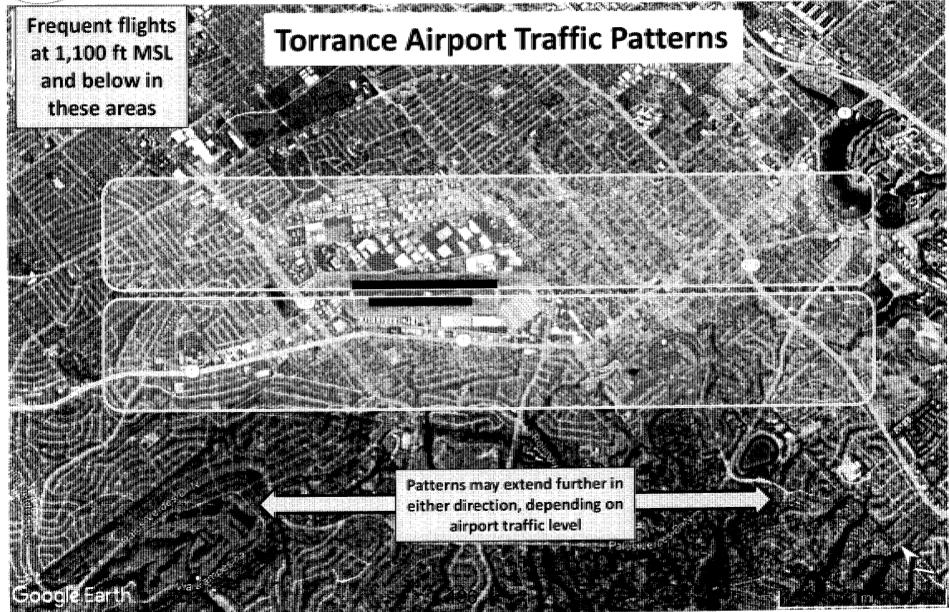

The aviation community is a very knowledgeable resource—USE US.

QUESTIONS?

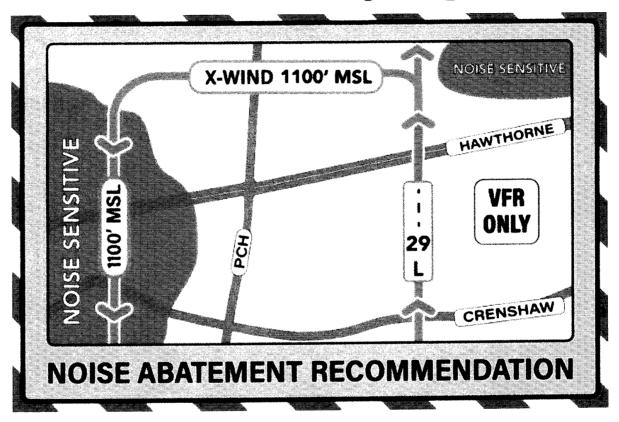

Suggested graphic for City websites

Example of Recommended Runway Signs

These colorful signs are designed to get the pilots' attention. They are awaiting approval and installation by City staff.

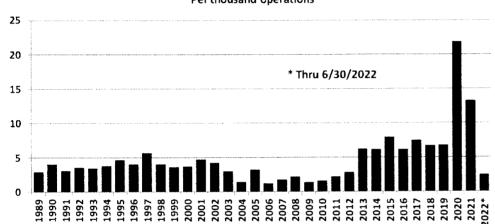

Torrance Airport Complaint History

(From Torrance Noise Abatement database)

Complaint Rate History

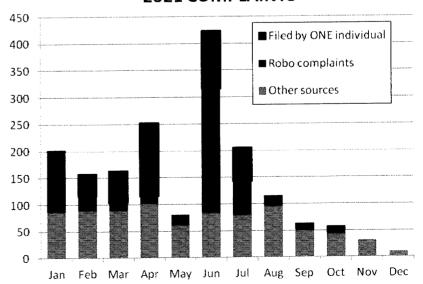

Per thousand operations

The complaint rate (per thousand operations) more than doubled in 2020 as the City was considering continuation of the expensive monitoring contract (\$1,000 per day). During the 9 months prior to shutting down that system, violations averaged only 2 per week.

Computerized complaint-filing programs permit one individual to distort reported complaint data. Here, one single individual made over half of the complaints in April 2021. That person may have been responsible for most, if not all, of the "robo-complaints" shown here in red.

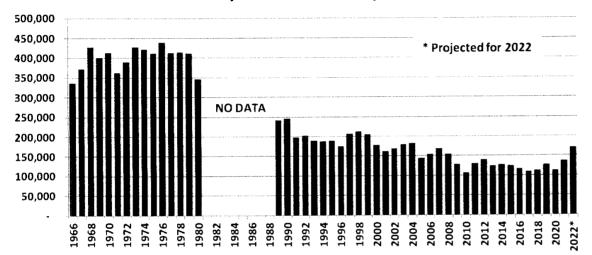

2021 COMPLAINTS

Torrance Airport Operations History (From FAA database)

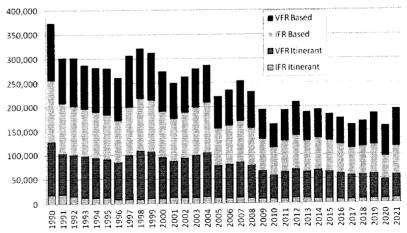

Operations History

Even with the recent increase responding to the current world-wide pilot shortage, the operations level (200,000) is at about half the historical maximum (over 400,000)

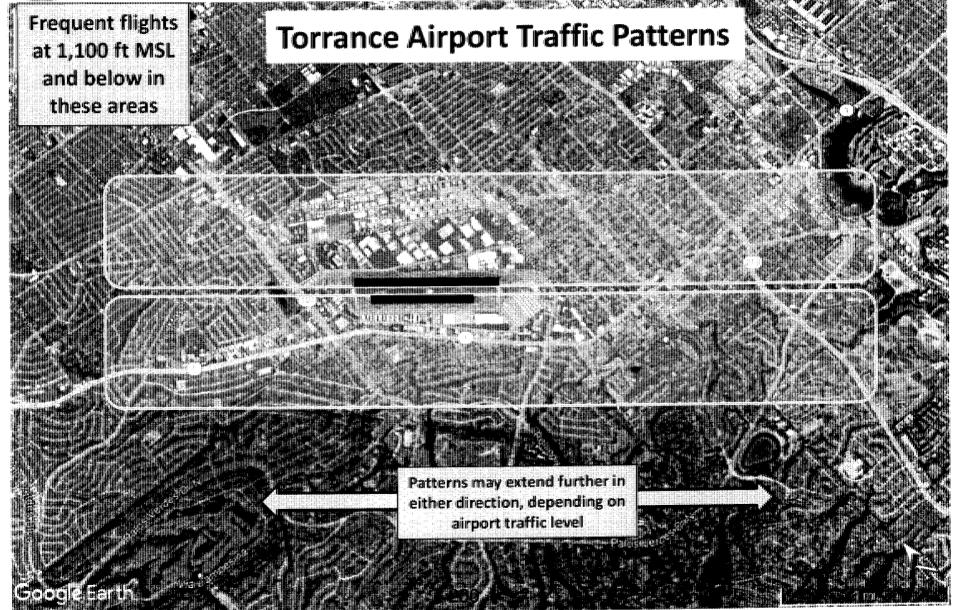

Historically, about one-third of operations are made by aircraft not based at our airport. As a regional transportation facility, the level of operations is determined by the demand for transportation and training.

Torrance Airport Operations

Suggested graphic for City websites

A Missed Opportunity?

Airport Planning District Proposed November 1981

In November 1981, the City of Torrance issued the Airport Noise Control and Land Use Compatibility Study, Final Report (Attachment 1 contains an excerpt). It outlined a policy to deploy "a public information program designed to create an awareness in the community of the nature of the activity at the airport and the resulting effects on the residents." It recommended creation of an Airport Planning District (APD) and included four disclosure processes that had been

implemented at other airports and had

proven helpful in lessening the conflicts between the community and airport operations:

- Attachment of a Notice of Disclosure to Property Deeds. All parcels within the APD would have a notification of the proximity to airport operations with a brief explanation of the implications relative to land use in the area.
- Agreement for Disclosure from Local Realtors. Working through the local real estate board, it is possible to convey the information concerning airport noise and over flights to prospective home buyers.
- Road signs Delineating the APD. Installation of roadside signs identifying the area as
 an APD could carry a statement indicating the APD is subject to over flights and noise
 from operations at TOA.
- Publication of APD Boundaries in Local Newspapers and Maps.

None of these recommended processes were ever implemented. Why not?

Perhaps it is not too late

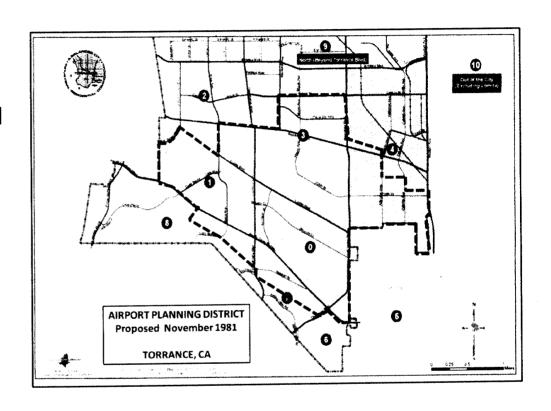

Forty years later, there are additional ways to reach the community. Using the City web pages for the Noise Abatement Office and the Torrance Airport, a very powerful channel to employ a "public information program designed to create an awareness in the community of the nature of the activity at the airport and the resulting effects on the residents" could be effectively deployed. A graphic depiction of the airport traffic patterns, which are the source of most complaints, would alert residents (both current and prospective ones) to those effects and where they will occur.

What happened to the APD?

- Street signs
- Published maps
- Sound proofing required with remodels

From the November 1981 City of Torrance Report: "Airport Noise Control and Land Use Compatibility"

Noise Reduction at Torrance Airport

Noise from airport operations cannot be eliminated, but it can be minimized

11/8/2022 Peter Broen, TAA President Jim Gates, TAA Past President

Background

- Until recently, training pattern work has mainly taken place on the north runway.
- More recently, a substantial increase in training resulted in a north training pattern that has often become saturated and controllers have had to send aircraft to the south pattern.
- The recent uproar concerning increasing traffic in the south pattern is not about excessively noisy airplanes. The complaint is about frequency of the noise; the amount of traffic.
- Many neighbors have a basic misunderstanding about how airports work

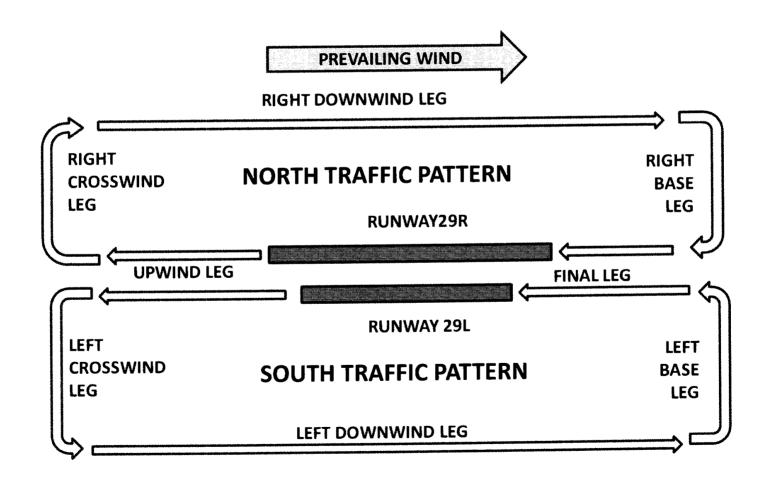

Our Messages

- Successful noise reduction requires voluntary pilot participation
- Aviation community is leading noise reduction efforts at the airport
- TAA supports noise reduction
- Torrance pilots are not the "bad guys"
- The City needs to take an active role in disseminating correct information about the airport to the community

Terminology

TORRANCE AIRPORT TRAFFIC PATTERN

Quiet Procedures for 29L (VFR Only)

- After takeoff, climb at maximum safe rate
- Reduce RPM crossing Hawthorne*
- Climb to pattern altitude and reduce
 RPM prior to turning to cross wind leg*
- Use minimum RPM in down wind leg*

* Lower power aircraft may be unable to do this safely, but they are much quieter

The Guidelines

- Flight safety is paramount
- Torrance has valid community noise limits
- Flight paths, altitudes and operational procedures cannot be mandated by City
- Pilots MUST obey the Federal Aviation Regulations (FARs).
- Pilots' voluntary use of quiet procedures is key to success

Our Efforts—Flight Schools

Sling Pilot Academy

- Selected modern <u>quiet</u> trainer: Sling NGT
- Their Rotax engines use unleaded auto fuel
- Academy teaches quiet techniques; mandates their use
- Use north pattern for landing practice whenever possible
- Performed flight test: higher pattern & lower
 RPM (64-68 dbA for quiet procedures)
- Looking for continuous improvement (flight testing; airframe & engine modifications, operational processes, etc)
- Participates in pilot survey

Our Efforts—Flight Schools

South Bay Flight School

- Teaches quiet procedures
- Does not permit use of south pattern
- Participates in pilot survey

Individual flight instructors

- Some participate in pilot survey
- More outreach is needed—
 communication is more difficult

Our Efforts—Robinson Helicopter Company

- Negotiated quiet routes for approaching & leaving TOA
- Requires owners to follow these routes when transiting to/from TOA for periodic training
- Make only direct arrivals and departures to south runway
- All landing practice is at north helipad and uses north helicopter pattern

Our Efforts--TAA

- Redesigned attention-getting runway signs to better relay quiet procedures to transient pilots (awaiting staff approval & installation)
- Recommended changes to noise abatement brochure to better communicate to pilots (awaiting staff approval & distribution)
- Recommended changes to "no left turn" letter to remove dangerous wording, elicit voluntary compliance & conform to Federal Laws (awaiting staff approval & use)

(More)

Our Efforts—TAA

- Performed noise flight testing with Sling NGT, Cessna & Decathlon
- Briefed Airport Commission & community on our noise reduction efforts (9/9/2022)
- Surveyed Torrance pilots on quiet procedures (September 2022)
- Regularly analyze complaints and violations; provide report to Airport Commission & public (quarterly)
- Regularly reach out to pilot community and airport neighbors with e-mails & web-based information (www.torranceairport.org/facts/)

Our Efforts—Individual Pilots

- Pilot survey results (September 2022):
 - Surveyed over 600 Torrance pilots
 - Only 43% have used the south pattern in the past 30 days; of those that do:
 - 80% use maximum safe climb rate after takeoff
 - Over 60% climb on runway heading and reduce RPM prior to making cross wind turn*
 - 64% use minimum safe power on down wind*
 - * Lower power aircraft may be unable, but produce much less noise
- About 25% of the pilots using the airport are not based here (Long Beach, Fullerton, Hawthorne, Santa Monica. . . .)
- TAA can assist in outreach about quiet procedures

Petition

- "Therefore, the undersigned residents of Torrance and adjacent cities, petition the Mayor and City Council to:
- Hire outside counsel with expertise in aviation law to identify and evaluate options that
 may still be available to reduce the airport's environmental impacts (e.g., charge
 landing fees, close south runway, resume enforcing early-left-turn law, prohibit sale of
 leaded fuel, etc.) and to defend the City against any legal challenges;
- Pay the City's legal expenses from the City's Airport Fund, not from general taxpayers;
 and
- Hold public hearings to discuss and consider all legally available options."

This is a clear indication that:

- the City needs to support current efforts by TAA, flight schools and pilots to minimize noise from airport operations;
- •the City needs to provide the community with a clear picture of the laws that regulate aviation in the U. S. and at Torrance Airport; and
- •the city needs to emphasize & enforce real estate disclosure requirements

What Do We Need?

City staff:

- Approve, manufacture, and install recommended runway signs
- Relay to the public:
 - Efforts by pilots, flight schools, Robinson and TAA to reduce noise
 - Legal limitations on City authority
 - The reality of airport operations (altitudes, traffic patterns)
- Enforce real estate disclosure requirements

Noise Abatement:

- Rewrite, publish, and make available new brochure material
- Correct "no left turn" letter & website
- Provide information about airport traffic patterns and the affected areas on website

City Council:

 End public confusion about applicable laws by repealing invalid and unenforceable TMC sections: 51.2.2, 51.2.3 and 51.2.19

The aviation community is a very knowledgeable resource—USE US.

QUESTIONS?

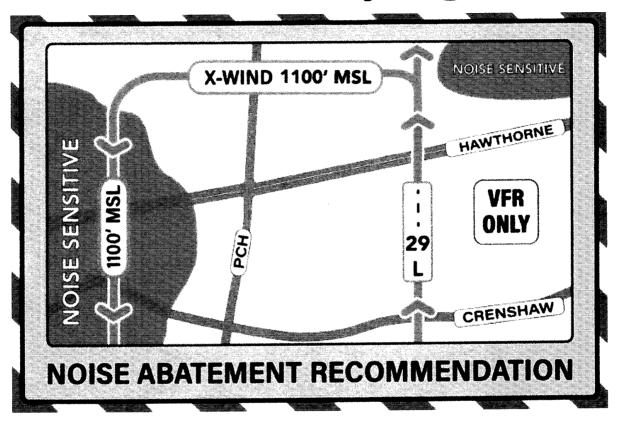

Suggested graphic for City websites

Example of Recommended Runway Signs

These colorful signs are designed to get the pilots' attention. They are awaiting approval and installation by City staff.

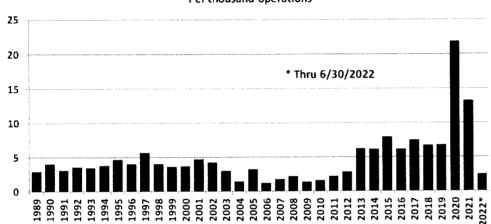

Torrance Airport Complaint History

(From Torrance Noise Abatement database)

Complaint Rate History

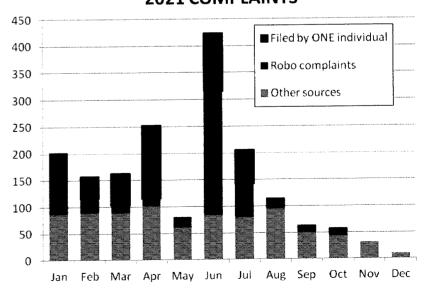

Per thousand operations

The complaint rate (per thousand operations) more than doubled in 2020 as the City was considering continuation of the expensive monitoring contract (\$1,000 per day). During the 9 months prior to shutting down that system, violations averaged only 2 per week.

Computerized complaint-filing programs permit one individual to distort reported complaint data. Here, one single individual made over half of the complaints in April 2021. That person may have been responsible for most, if not all, of the "robo-complaints" shown here in red.

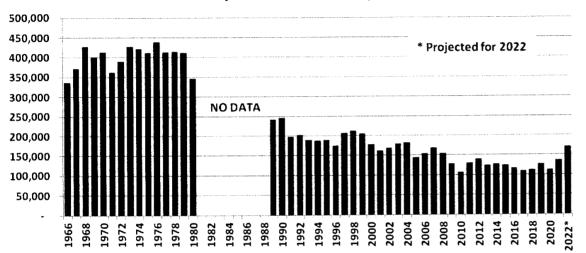

2021 COMPLAINTS

Torrance Airport Operations History (From FAA database)

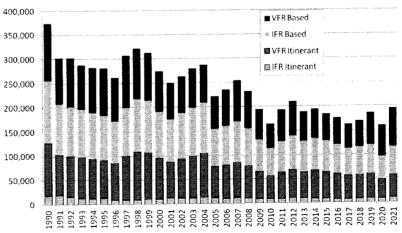

Operations History

Even with the recent increase responding to the current world-wide pilot shortage, the operations level (200,000) is at about half the historical maximum (over 400,000)

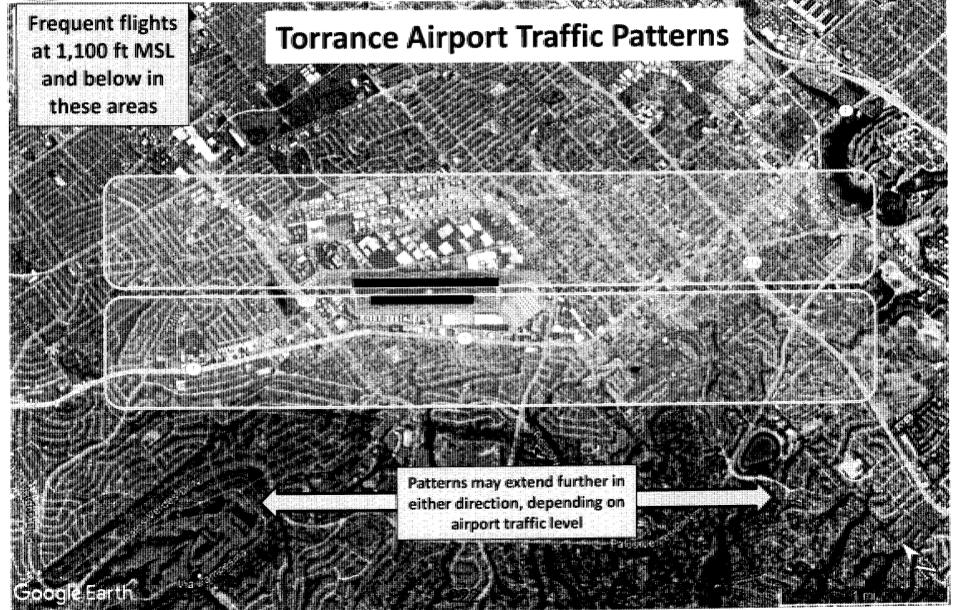

Historically, about one-third of operations are made by aircraft not based at our airport. As a regional transportation facility, the level of operations is determined by the demand for transportation and training.

Subject: Public Comment on Item 91, Agenda for 11/8--Sling Pilot Academy noise test for south pattern

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

On May 25, 2022, the Academy performed a number of test flights to measure the noise generated by their standard training aircraft, the Sling-2-NGT. Although the Academy had already taken many steps to minimize their noise footprint, they wanted to evaluate whether noise could be further decreased by raising the pattern altitude of their operations.

Commercial airlines have cancelled many, many flights since the COVID restrictions ended and the demand for travel accommodations has skyrocketed--many cancellations due to lack of crews. Flight schools all over the world have seen a huge increase in student applications from young men and women eager to begin this rewarding career. This is a once-in-a-lifetime opportunity for them. As pilot supply begins to meet the demand, we will very likely see a decrease in flights at all airports that train these pilots.

The Academy is aware of the increase in complaints resulting from the increase in training and is committed to minimizing its impact on the neighbors.

Jim Gates

South traffic pattern study 8/31/2022

Noise from airport operations cannot be eliminated, but it can be minimized.

On May 25, 2022, the Academy performed a number of test flights to measure the noise generated by their standard training aircraft, the Sling-2-NGT. Although the Academy had already taken many steps to minimize their noise footprint, they wanted to evaluate whether noise could be further decreased by raising the pattern altitude of their operations.

Methodology:

The aircraft selected, Sling-2-NGT N747VA, was typical of the training fleet at the Academy and was loaded to simulate a typical training flight with a student and instructor.

Two main parameters were tested during 17 flights:

- 1. propeller rotation speed from 1640 to 2144 RPM, and
- 2. aircraft altitude from 900 to 1350 feet above mean sea level (MSL)

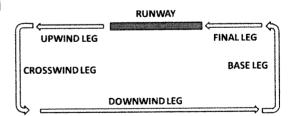

The test flights were made over Butcher Hill, where the maximum noise levels were recorded for each flight. Aircraft altitude and engine RPM were downloaded from the aircraft's electronic flight instrument system and correlated with the times the aircraft passed over the recording points.

Discussion:

A major source of aircraft noise is the propeller. As propeller tip speed approaches the speed of sound, the noise it generates increases. The greater the distance from the propeller, the lower the noise one perceives.

Traffic patterns are used by the control tower and the pilot to sequence each aircraft into existing traffic and to permit adequate spacing from preceding aircraft for a safe landing. The length of upwind and downwind legs are adjusted during flight to allow for this to occur. Thus, any aircraft's path over the ground is not always the same.

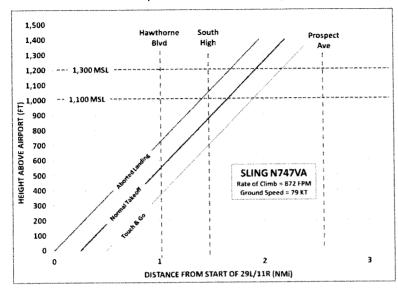

STANDARD AIRPORT TRAFFIC PATTERN

At airports like Torrance Airport, the "standard" traffic pattern consists of a climb on runway heading in the upwind leg to approximately 300 feet below traffic pattern altitude and then the turn to crosswind leg is imitated. The climb then continues to standard pattern altitude (1,100 feet MSL at Torrance) in the crosswind and downwind legs.

In the south traffic pattern at Torrance, this sometimes puts an aircraft over populated hillside areas (which are nearly 300 feet MSL) while it is still climbing at high power. Therefore, the Academy

prefers their students to use the north runway whenever possible. If the south runway is the only possibility, the Academy requires that their aircraft reach pattern altitude and reduce propeller RPM <u>before</u> making the crosswind turn. However, this requires a longer upwind leg prior to making the crosswind turn as compared to the standard pattern configuration. This makes the ground track over

populated areas even longer than when the "standard" pattern is flown. It also places the crosswind leg farther from the airport.

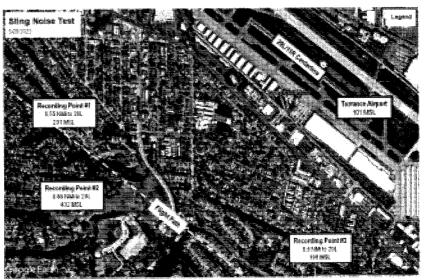

This graphic depicts the point at which the test aircraft could reach a specific altitude when climbing straight out from the runway. During a touch-and-go operation, it would fly significantly past South High and almost halfway to Prospect Avenue before reaching a 1,300 MSL pattern altitude.

The control tower, on several of

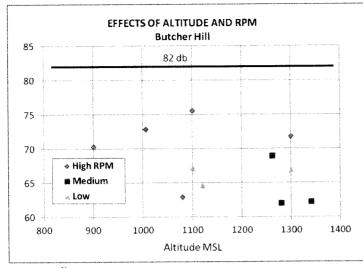

the flights, questioned why the pilot was not turning crosswind at 800 MSL. Later conversations with the tower personnel revealed that they found it very difficult to maintain visual contact with the aircraft as it got further from the airport (and therefore they could not assure separation of aircraft). This adds a safety concern for using higher altitudes in the pattern.

The Sling NGT is capable of climbing fairly steeply. Other training aircraft using Torrance Airport may not have that capability--some may only be capable of climbing at 500 feet per minute. These aircraft would not reach 1,300 MSL until almost to King Harbor, thus tracing a much longer ground track over a populated area while at a high power setting and making visual contact from the control tower very difficult--if not impossible.

Sound recordings during the test were made at three locations—all under or close to the test aircraft flight path. The most reliable measurements were made atop Butcher Hill (Recording Point #2). This location is the highest in the area (432 feet MSL) and was several hundred feet from any structures that could reflect sound and from streets or other human activity that would

distort the readings. The test aircraft flew directly over Butcher Hill each time.

As this graphic illustrates, it was more difficult to discern the small effects of altitude on noise. This graphic clearly does show that reduced RPM results in significantly lower sound readings.

The graphic also shows that the Sling training aircraft do not exceed the 82 db(A) limit--even at lower altitude and high RPM.

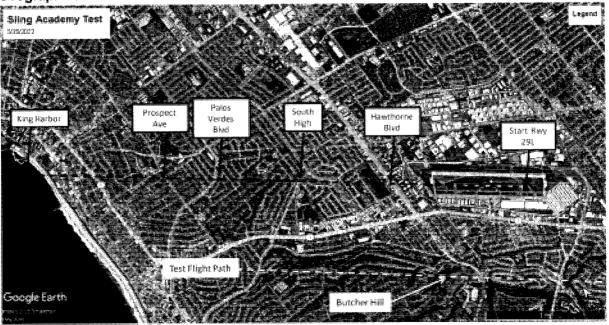

Conclusions:

1. Even at high RPM and low altitude, the Sling-NGT did not come close to the City maximum limit of 82

db.

- 2. Climbing on runway heading to 1,100 MSL and reducing RPM to minimum prior to turning crosswind is the most effective procedure to minimize overall noise in populated areas around the airport.
- 3. Because of the distance required to climb to higher altitude and the fairly small effect of the increased altitude on noise, an altitude of more than 1,100 MSL does not look to be the best choice. This also allows tower controllers to maintain better visual contact with the aircraft.

The Staff Report has many copies of the letter I received from the FAA regarding the FAA's exclusive authority to regulate aircraft in flight. Here is a copy of the letter that started that chain of communications. I never received a response from Mr Sullivan, so I wrote directly to the FAA.

Jim Gates

1 July 2019

Patrick Sullivan, City Attorney City of Torrance 3031 Torrance Blvd. Torrance, CA 90503

Subject: Early left turn violation letters

Dear Mr Sullivan:

In the past several months, a number of our members have received a letter from the Community Development Department entitled "EARLY LEFT TURN VIOLATION." It cites Torrance Municipal Code Section 51.2.3.e ("Aircraft taking off to the west shall not turn left until they have either reached the ocean or attained an altitude of fifteen hundred (1,500) feet.)" as the basis for the "violation." It further states that "future violations are subject to enforcement."

As stated on the FAA's web site:

"Congress has provided the FAA with <u>exclusive authority</u> to regulate aviation safety, the efficiency of the navigable airspace, and air traffic control, among other things. <u>State and local governments are not permitted to regulate any type of aircraft operations, such as flight paths or altitudes, or the navigable airspace.</u>

<u>Cities and municipalities are not permitted to have their own rules or regulations governing the operation of aircraft."</u> [emphasis added]

In other words, the FAA's Federal Aviation Regulations (FARs) are the only rules that apply to aircraft operations, including flight paths and altitudes. Torrance Municipal Codes clearly do not apply and may, in fact, be an improper encroachment of the exclusive authority given to the FAA by Congress.

While Torrance pilots may voluntarily comply with the City's recommendations (and they generally do), they are not required to do so. Their flights are only required to be made in coordination with the Air Traffic Control Tower (as specified in the FARs) while in Class D airspace.

I request that you advise me which of the FAA's Federal Aviation Regulation you believe are being "violated" by these pilots, under what authority you are issuing these "violations," and what "enforcement of future violations" means.

Respectfully,

Jim Gates
Torrance Airport Association

Torrance, CA 90505

CC: Phil Bradshaw
Oscar Martinez
Airport Commission
Arjun Garg, FAA Chief Counsel

4 July 2019

Mr Arjun Garg, Chief Office of the Chief Counsel Federal Aviation Administration 800 Independence Avenue SW Washington, DC 20591

Subject: City of Torrance regulations governing aircraft flight paths and altitudes

Dear Mr Garg:

As stated on the FAA's web site:

"Congress has provided the FAA with <u>exclusive authority</u> to regulate aviation safety, the efficiency of the navigable airspace, and air traffic control, among other things. <u>State and local governments are not permitted to regulate any type of aircraft operations, such as flight paths or altitudes, or the navigable airspace.</u>

<u>Cities and municipalities are not permitted to have their own rules or regulations governing the operation of aircraft."</u> [emphasis added]

In the past several months, a number of our members have received letters from the City of Torrance, CA, Community Development Department entitled "EARLY LEFT TURN VIOLATION." It cites Torrance Municipal Code Section 51.2.3.e ("Aircraft taking off to the west shall not turn left until they have either reached the ocean or attained an altitude of fifteen hundred (1,500) feet.)" as the basis for the violation. It further states that "While the FAA control tower may have authorized the above noted procedure, it is a violation of Torrance Municipal code. This is to inform you that future violations are subject to enforcement."

We believe that this attempt to regulate aircraft flight paths and altitudes at the Torrance Airport by the City and their direction to ignore control tower authorizations are clear and improper encroachments on the FAA's exclusive authority to regulate aircraft operations as provided by Congress.

We request your official written opinion.

Respectfully,

Jim Gates
Torrance Airport Association

Attachment: Photo of letter from Community Development Department, City of Torrance, CA

TÖRRANCE

COMMUNITY DEVELOPMENT DEPARTMENT

May 29, 2019

EARLY LEFT TURN VIOLATION

As you know, Torrance Airport is surrounded by residential neighborhoods and as such is a noise sensitive area. There are a number of noise abatement procedures in place at Torrance Airport designed to allow the airport and the community to co-exist, including a right turn at Hawthorne Blvd. for VFR departures off runway 29R and for straight out departures from either runway. You may not be aware that Torrance Municipal Code Section 51.2.3.e prohibits a left turn, when departing to the West, until either reaching the ocean or attaining an altitude of 1500 feet.

On May 28, 2019 your aircraft, Piper Cherokee, New was recorded making an early left turn prior to the shoreline. Pilot given choice of right or left closed traffic following option on 29L. Pilot selected left closed traffic. Your aircraft violated at 2:01:09 P.M. after departing from runway 29 left. The left turn was initiated at 8732 Ft.

While the F.A.A. control tower may have authorized the above noted procedure it is a violation of the Torrance Municipal Code. This notice is to inform you that future violations are subject to enforcement.

Torrance Municipal Code 46.8.12 states that for pilot culpability, the owner is presumed to be the pilot. Such presumption may be rebutted only if the owner identifies to Noise Abatement staff the person who was, in fact, the pilot. Consequently, if you owned or leased the aircraft but were not the pilot in command at the date and time of the violation shown above, immediately upon receipt of this notice, forward to this office, the name and address of the pilot in command of the aircraft at the time of the above alleged violation.

Please contact the Noise Abatement Center at (310) 784-7950 to discuss the above incident.

Sincerely,

Oscar Martinez Manager

Planning and Environmental Division

Phil Bradshaw

Environmental Quality Officer

Zamperini Airport Noise

From: Randy Cilva <

Sent: Wednesday, November 2, 2022 7:57 PM
To: Mattucci, Aurelio < AMattucci@TorranceCA.gov >
Cc: CityCouncil < CityCouncil@torranceca.gov >

Subject: Zamperini Airport Noise

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Mr. Mattucci,

I would like to address to you a matter that concerns me.

You won your city council seat by a slim margin. I was part of that margin and you now represent me to the city council.

I'm writing about Torrance airport noise and safety.

When I moved to Torrance in 1972 the airport noise was negligible. When I bought a home near South High in 1994 the noise was higher, but manageable. Now that multiple flight schools have begun selling lessons the noise is constant. The touch and goes make it near impossible to converse with my neighbors when outdoors.

I'm concerned on several levels. The noise, of course. The fact that inexperienced pilots fly over this area constantly. The impact of leaded fuel exhaust polluting the air we breathe (leaded fuel was banned in autos decades ago). The impact of aircraft noise interferes with the education of students at South High, Calle, Seaside, Arnold, Richardson and Riviera schools. This affects thousands of students.

I had no say in the approval of these flight schools. It seems to me that the citizens affected by these decisions should have a say in actions that affect them 6 days a week. None of my neighbors were asked if they would like to have an aircraft flying too low over their homes every 6 minutes, if 2 planes are under instruction it's 3 minutes and if 3 planes it's constant.

Is it going to take one of these inexperienced pilots to crash into one of the aforementioned schools or a home to make a change in what clearly is a huge safety issue to our community?

I realize that the airport was here before I was. The pilots that follow the rules and fly from one location to another is one thing. The flight schools are another.

I'm concerned that when the Santa Monica airport shuts down that the problems we have now will be exacerbated. If laws are not put in place and enforced soon I'm afraid Torrance will be an awful place to live.

I love this city. I grew up here, met my lovely bride at South High and raised my son here who also attended South. I don't want to be driven from this fine city by the shortsightedness of our city's leadership to not look out for the future quality of life for its citizens.

Thank you for representing me before the council. Please let me know you have received this message and what you think is an appropriate way to deal with this issue. I would love for this to be addressed at the November 15th meeting, if not sooner. Again, thank you.

Sincerely,

I can be reached at

PS. 10/31/22

Today the noise was the worst yet. An aircraft was over the neighborhood constantly from 10:00 AM until nightfall. It's becoming unbearable.

11/1/22

Today was a treat. The winds were on shore so the flight schools only landed while flying over my house. That's much quieter. Unfortunately the families that live to the east of the airport had to endure the sound of aircraft constantly circling over their homes instead.

To: Council Meeting Public Comment < CouncilMeeting Public Comment@TorranceCA.gov>

Subject: Torrance airport issue

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Please do what's necessary to curtail the noise and pollution from the airport. There are many solutions that have been proposed and more concrete oversight is urgently needed.

Why are there no landing fees?

Why are no fines being levied against this who break the rules?

Why are no fees charged to those who use the airport like for instance the Santa Monica airport is doing?

When I bought my home in 1995, I knew there was an airport. What I couldn't have known is how the traffic out of the airport woul increase over time.

I've worked as a realtor in the area for over two decades and I've literally had buyers cancel escrow on properties they loved because they hated the constant and loud noise.

Sincerely

Jenna Christensen

The Riviera Homeowners Association recently sponsored and submitted a petition to the City of Torrance. It is included in the staff report for Item 91. This makes it a public record. The petition states::

- ". . .training operations from the airport has brought noise to levels now intolerable for many residents"
- "...residents are also concerned about air pollution from aircraft using leaded fuel and safety of low training flights"
- ". . .these problems are also hurting residential property values."

These statements would indicate (if one did not know better) that I live in a terrible neighborhood whose homes all have a major property defect.

A California court determined that a seller must disclose "neighborhood noise problems or other nuisances" when a neighbor (i.e., the airport) displays a "pattern of offensive and noxious activities." When I sell my home in the Riviera, must I disclose these statements by the Association about these "neighborhood noise problems or other nuisances" to the potential buyer--even if I think many of the statements in the petition are false?

If I had signed the petition, the answer is clearly YES, because it would show I agreed with the statements and therefore must know my home has a major property defect. Disclosure would reduce my home's value, but failure to do so would expose me to a fraud suit by the buyer--one that I would lose, based on my signature on the petition.

But I did not sign it because many of its statements are false and I think my neighborhood is great!. So, should I still disclose because I am a HOA member? Should I disclose even if I were not a HOA member?

I asked a prominent local area realtor. His response: Now that the HOA has made the public statement, it may be prudent to disclose it in the transfer disclosure statement that is given to buyers.

If I choose not to disclose, I still may be sued by the buyer, which would cost a lot to defend--even if I prevail.

Thanks, Hollywood Riviera Homeowners Association! Either way, I lose!

Nov 8 airport agenda

From: Diane Holland <

Sent: Thursday, November 3, 2022 10:35 AM

To: Council Meeting Public Comment < Council Meeting Public Comment @ Torrance CA.gov>

Subject: Nov 8 airport agenda

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

My name is Diane Holland and I live in Torrance Seaside neighborhood.

I'm shocked at the increase in noise coming from the incessant planes overhead.

Many times I can't hear someone right next to me when I'm in my backyard.

Non-TOA-based aircraft are allowed to use our airport free of charge.

Why!!???

In October of 2020, staff reported that landing fees could bring in an estimated net gain of \$257,000 to \$642,000 annually.

That would decrease the excessive amounts of touch-and-go training.

Please do your job and listen to all of us who are truly suffering.

Thank you Diane

Public comment, Item 9I on 11/8 agenda of City Council--landing fees comparison

From: Jim Gates Sent: Thursday, November 3, 2022 6:14 PM

To: City Clerk < CityClerk@TorranceCA.gov>; CityCouncil < CityCouncil@torranceca.gov> **Subject:** Public comment, Item 9I on 11/8 agenda of City Council--landing fees comparison

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Hon Mayor & Members of the City Council:

Item 9I lists Oxnard, Camarillo, Santa Monica and Catalina airports as examples of how landing fees can generate city income. But let's look at the facts:

- Catalina is a private airport. It has no shopping centers, medical centers, or car dealership on its property to generate income. Visitors are happy to pay its \$35 fee to visit the on-field restaurant, go to Avalon or hike on the many trails.
- Oxnard has landing fees ONLY for aircraft over 12,500 certificated maximum gross weight (MGW).
- Camarillo has landing fees ONLY for air carrier aircraft over 12,500 pounds max gross weight. It has a popular restaurant, real FBO services and many aviation businesses.
- Santa Monica has a landing fee of \$5.48 per thousand pounds MGW. This applies to ALL aircraft, both transient and based at the airport. So, what has been the result?
 - Most transient aircraft refuse to pay the fee.
 - Many based aircraft also refuse to pay it
 - o The City has found that it must pay the fee collector whether or not they are able to collect anything from the aircraft owners and there are very few legal ways to collect.
 - Many businesses that contributed to airport income have left and there is now a shortfall in airport operating funds.
 - o The main reason for the fees was to facilitate closing the airport so its ocean-view property could be developed for condos. However, the populace of Santa Monica is trending anti-development and that plan may not work out. Furthermore, the city now finds it may cost more to close the airport than expected because the old Douglas factory site may require extensive (and expensive) remediation.
 - o The city is now embroiled in lawsuits over the legality of the landing fees in the first place.
- Torrance airport has no restaurant, no hiking trails, etc (like Catalina). It has no air carriers, real FBO services or jet fuel (like Camarillo does). It does have car dealerships, shopping centers, and other non-aviation income sources on airport property that generate a large surplus. The Airport Fund contributes millions of dollars to the General Fund every year, so the City does not need landing fees to fund the airport.

Then what is the real purpose of the landing fees? If the City needs more money, a much more lucrative source of revenue would be installation of parking meters at Del Amo Shopping Center and the airport shopping centers. Oh, you say, but that would drive away business?

Then, is the real purpose of instituting landing fees to drive away business from the airport? Has anyone on the staff really looked into what it would cost in terms of jobs, lawsuits, and lost revenue? Would the paltry amount that would realistically come from landing fees offset that cost?

Oh, and the businesses that are driven out of Torrance? They will re-locate to other local airports, but their students and aircraft renters will still come to Torrance to practice landings at our PUBLIC USE airport. However, the cities they move to will keep the revenue that used to come to our city.

Please think this through very, very carefully.

Jim Gates

Council members,

I do not want this airport turning into another Van Nuyes airport with extreme noise and air pollution, please keep Torrance a good place to live. As for the early morning jet take-offs, this must stop immediately! Recently I have also noticed that planes have been flying over my house, this is new and can it stop?

Please make every effort to abate the noise and pollution coming from the airport.

Thank You,

My name is Therese and I live in Torrance,

When is the issue of noise and pollution from TOA going to be addressed?

How nonsensical is it to have hundreds of flights a day circling crowded residential areas over and over? It is not the responsibility of Torrance residents to shoulder this burden in the name of a so-called pilot shortage.

I understand the city does not have jurisdiction over flight patterns, however you do have control of planes when they are on the ground. Do something about it.

The fact that the council would put a moratorium on additional flight schools acknowledges the fact that there is a problem and it is a step in the right direction. However, it does not address the 7 existing schools, multiple aircraft per school, and multiple flights per aircraft. Do more.

Implement a landing fee and put a stop to touch-and-go training.

When will the residents have priority over the pilots?

The past and current "steps" to reduce noise have NOT worked:

- 1. Voluntary compliance and education has NOT worked and will not work with the sheer number of flights per day. 400+ flights a day equates to almost 1 flight per minute for 10 hours straight.
- 2. Asking pilots to "fly friendly" does NOT work. All you have to do is go outside and listen. It is well documented that pilots and the aviation community do not care about how much noise they make. I have seen instances of pilots threatening to fly over someone's house over and over at night and relishing in it. I have also seen pilots simply say "just move". They are hardly sympathetic, borderline aggressive, and offer no real solutions.
- 3. Fixed noise monitors with outdated noise levels does NOT work. It does nothing to address the continuous and constant noise generated by these flight schools. Constant equates to a plane buzzing overhead every minute for hours on end. While they may not break any rules, just go outside and listen to some of these legacy aircraft, they are LOUD. This is what residents have to live with from 8AM to 8PM. Darkness does not provide any relief as the flights continue while families sit down for dinner and put their kids down to sleep.
- 4. Noise Abatement has clearly dropped the ball by failing to respond to complaints. It is well documented that TOA generates thousands of complaints each week. However nothing is ever done. Whether Noise Abatement's system is broken or there are simply too many complaints, it is clear Noise Abatement simply shields the pilots from angry residents.

The above points to one thing loud and clear, the current effort or lack thereof is NOT working. Rules and fees must be put in place immediately.

The lack of rules is clearly illustrated by the increase in traffic and flights from other airports. I have documented aircraft from Santa Monica, Long Beach, even as far as Lancaster coming to TOA to do touch-and-go training. Why? Because other cities have put rules in place to protect their residents. Why hasn't Torrance done this?

Put your constituents before the pilots. Not next month, not next year, NOW.

In August 2021, I asked the City Council about a 1981 report, Airport Noise Control and Land Use Compatibility Final Report (see attached letter). The report had recommended a set of policies to provide "...a public information program designed to create an awareness in the community of the nature of the activity at the airport and the resulting effects on the residents..." The report foretold the issues and problems discussed today and recommended how they could be avoided. None of its recommendations were implemented.

WHY NOT?

Jim Gates

DATE: 08/13/2021

FROM: Jim Gates

SUBJECT: Disclosure of airport operations

When I read the airport complaints logs, I get the distinct impression that many of those who complain were unaware of airport operations when they decided to move near it. Some even believe they live in a "no-fly zone." Their comments indicate that they do not understand the reality of Torrance Airport operations.

Forty years ago, in November 1981, the City of Torrance issued the **Airport Noise Control and Land Use Compatibility Study, Final Report** (an excerpt is attached). In addition to a number of restrictions on airport operations (some of which were not legal), it outlined a policy to deploy "a public information program designed to create an awareness in the community of the nature of the activity at the airport and the resulting effects on the residents." It recommended creation of an Airport Planning District (APD) and included four key actions to implement that policy.

Earlier this year, my friend bought a home in Walteria--Less than 1/3 mile south of the airport, within Area 7 (which saw 676 complaints in the 3rd quarter of 2020), and within the APD.

He said there was NO AIRPORT DISCLOSURE.

Please tell me:

- Why was there no disclosure?
- What has happened to the Airport Planning District policies that the report recommended?
- Why can't these reasonable and effective policies be implemented and enforced?

Excerpt from:

Torrance Municipal Airport Airport Noise Control and Land Use Compatibility Study Final Report November, 1981

INTRODUCTION

The preparation of this document was financed in part through a planning grant from the Federal Aviation Administration as provided under Section 13 of the Airport and Airway Development Act of 1970. The contents of this report reflect the views of the professional staff of PRC Speas participating in this project. PRC Speas utilized, in some cases, airport operations data and land use and zoning information supplied by the City of Torrance. The scope of the project and procedural policies were determined jointly by PRC Speas and the City of Torrance who share the responsibility for the facts and accuracy of the data presented in this report. The contents do not necessarily reflect the official views or policy of the FAA. Acceptance of this report by the FAA does not in any way constitute a commitment on the part of the United States to participate in any development depicted therein nor does it indicate that the proposed development is environmentally acceptable in accordance with Public Laws 91-190, and/or 90-495.

5.5 Torrance Airport Planning District

Using the flight track corridors as the primary guideline, boundaries for a proposed Airport Planning District (APD) have been defined. The boundaries generally follow existing street patterns. This APD is shown in Exhibit 5-4. The airport related restrictions on land use within the APD may be accomplished through a policy of disclosure together with an official review process for any proposed changes in land use.

Disclosure - This concept is basically a public information program designed to create an awareness in the community of the nature of the activity at the airport and the resulting effects on the residents. Several avenues for this disclosure process have been implemented at other airports and have proved helpful in lessening the conflicts between the community and airport operations.

- Attachment of a Notice of Disclosure to Property Deeds. All parcels within the APD would
 have a notification of the proximity to airport operations with a brief explanation of the implications
 relative to land use in the area.
- Agreement for Disclosure from Local Realtors. Working through the local real estate board, it
 is possible to convey the information concerning airport noise and over flights to prospective
 home buyers.
- Road signs Delineating the APD. Installation of roadside signs identifying the area as an APD
 could carry a statement indicating the APD is subject to over flights and noise from operations at
 TOA.
- Publication of APD Boundaries in Local Newspapers and Maps

Official Review Process - The objective is to have each request for a change in land use in the APD be subject to a review by City Staff personnel who are knowledgeable concerning the effects of aircraft noise and over flights on various land uses. Because of the relatively large area involved, this should not be implemented in such a way as to cause an extensive review and possible environmental report for individual parcels. Instead, the applications would be checked against the APD overlay and, if located in the designated area, forwarded to the appropriate reviewer, e.g., the Environmental Quality Department. The applicant would then receive the appropriate notice of disclosure together with recommendations for necessary building noise control procedures. The staff reviewer would make recommendations

appropriate for the exact location of the subject parcel within the overall APD.

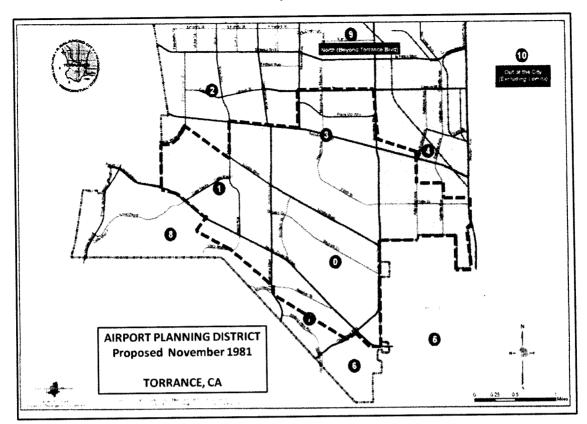

The cities of Lomita and Redondo Beach might consider a similar APD along the flight corridors passing through each community. A review of building permit applications would allow the staff reviewer in each city to alert the residents to potential problems and recommend appropriate noise control measures.

Hello,

My name is Larry Ruben and I have lived in the direct flight path of the Torrance Airport for over 22 years.

Flight traffic/training patterns and Noise Abatement policies are part of the Torrance municipal code to ensure that the residents surrounding the airport can enjoy a quality of life without the constant excessive noise.

The existing City of Torrance 'fly friendly' policy, along with the pilot self-policing regarding excessive noise violations has never worked. It's akin to the Fox guarding the Hen House. The City of Torrance has a Noise Abatement policy that needs to be enforced. While a number of pilots will follow the policies and procedures that are on the books, there many who won't, and others that don't. The Torrance Airport Association can't guarantee that all pilots will follow the recommended self-policing practices, so enforcing the existing rules and laws in the City's Municipal Code is needed to ensure compliance.

Part of enforcing the existing laws is the Exclusion of Violation Prone Pilots and Aircraft. Division 5, chapter 1, Article 7 of the City of Torrance Municipal code clearly provides the process on how the City can enforce the provisions and all other laws, rules and regulations pertaining to the use of the Airport. Part of this process is the denial of the use of the City's airport for cumulative violations of a pilot and/or aircraft. This is clearly spelled out in Sections 51.7.2 and 51.7.3. In order to properly enforce the existing noise limits, this would mean that the City needs to have monitors in the correct locations to ensure compliance. The existing seven monitors are spaced evenly around the airport and provide large gaps of coverage of about a half mile between them. Pilots can easily fly through the gaps and avoid the monitors, violating the noise limits in the City's Municipal Code.

With the new Casper System, the addition and/or relocation of monitors, pilots and aircraft following the established traffic patterns and noise limits, and the City enforcing the existing laws in the Municipal Code, a workable solution for all parties can be obtained.

Regards,

Larry Ruben

Subject: Airplane Noise - Quantified

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Honorable Mayor Chen and City Council Members,

I was sitting on my front porch with the Saturday crossword puzzle and after 15 minutes of aircraft noise I thought I'd count the aircraft flying over my neighborhood. I knew there were a lot, but WOW! I only counted the aircraft I could see fly towards me. In an email from Jean Adelsman on this subject, she wrote that there were as many as 50 flights a day. There are far more than that. I stayed in the front of the house from 11:25 am to 3:38 pm. It got so I can recognize the aircraft from their engine noise. I counted 172 aircraft in 4 hours and 14 minutes. an average of one aircraft every 88.6 seconds.

I came inside once I stopped counting and still hear the near constant noise as I write this. It was eye opening. Every 88.6 seconds the neighborhoods around the airport are disrupted by planes flying too often and too low overhead.

Below is the log data that I collected. As you can see highlighted, there are regularly more than one aircraft flying and once there were six.

This must stop! Eliminate the flight schools at Zamperini Field!

Thank you for your attention to this matter.

Best regards,

Randy

Subject: Airport operations

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

This past weekend I was working in my yard all morning, and I noticed the continuous takeoffs from the airport flying basically over my head across from Lago Seco park.

The City has finally implemented noise management - which tracks flights and alerts on flights that exceed a generous noise limit. We look forward to effective enforcement of violations.

But this doesn't take into account virtually continuous operations, and the noise impact of even below-threshold noise that happens continuously over a period of hours.

There is a point where a change in the intensity of use effectively becomes a change in use, and needs to be managed.

The City has an obligation to manage the Airport in the interest of the _entire Torrance community_, not just the pilot and operator communities. How best to do that? It remains to be seen; but the issue of the increase in flight numbers due largely to flight schools must be addressed.

The leadership of the pilot community is disinterested in collaborating on managing the impacts on the adjoining neighborhoods. At some point, that kind of position led to the ultimate closure of Santa Monica airport. I do not want our airport closed. I want a collaborative effort between the community, the City, and the airport users to allow operations that effectively manage their impacts on our neighborhoods.

And we are going to demand that it be managed in a way that deals with the noise, lead, and other environmental impacts on our neighborhood.

Marc Danziger

Subject: PUBLIC COMMENT - CITY COUNCIL MEETING NOVEMBER 8 - ITEM 9I - AIRPORT NOISE ABATEMENT UPDATE

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Honorable Mayor and City Council:

Some relevant information is missing from the staff report and some of the information is incomplete. Please consider the following.

The report does not quantify the number of early left turns. The Casper system was designed to identify them. How many early left turns are there? How many are departures? How many are training in the south pattern?

The staff report quotes the FAA who states the City can adopt noise restrictions but, "Any such restriction would need to comply with the Airport Noise and Capacity Act...and 14 C.F.R. Part 161, which outlines the process, analysis, and approvals required for imposing a noise or access restriction at the airport." What the report does not say is that the FAA process is so loaded with hurdles that virtually no airport that has tried in the last 30 years has been able to obtain such approval. For example, LAX and Burbank Airports both spent lots of time and money going through the process but failed to obtain FAA approval. Going down that road is dead end, not a viable option.

The staff report states only 11 complaints were found to be violations. It does not mention the <u>total</u> number of violations. Casper's Flight History data shows that, in its first 11 weeks, there have been at least **112 noise violations** automatically detected by the City's noise monitors regardless of complaints. **This is an average of over 10 violations per week which is significant and needs to be considered.**

Currently, the City does not follow its own Municipal Code. Section 51.7.3 states that any aircraft that causes three or more noise violations within any three-year period shall be presumed to be a noisy aircraft and will be banned from the airport (without a hearing board process, but with an appeal to the Airport Manager). A review of Casper NoiseLab's Flight History indicates that there is a Beechcraft Bonanza with 19 noise violations in the past 3 months. Why hasn't this plane been banned and why doesn't the City follow the procedure required by Municipal Code Section 51.7.3?

The staff report states, "Since going live, the City has received 919 noise complaints." However, Airnoise statistics show 7,000 complaints were filed through their system in just the past 30 days. Does the number 919 consist only of complaints filed on NoiseLab? What is the total number of complaints filed from all sources?

NoiseLab's website states City staff does not process "auto-generated complaints." What is an "auto-generated complaint? Does this mean a complaint filed using Airnoise? Airnoise complaints are generated by residents who use it to assist them in filing. Airnoise identifies more aircraft by N-Number than NoiseLab. Plus, it is the easiest way (by far) for residents to file complaints. Why aren't complaints submitted through Airnoise treated the same as other complaints? Counting Airnoise and all other sources, how many complaints have been filed?

The staff report states, "Any complaints related to flight paths, including low-flying aircraft, needs to be reported directly to the FAA for investigation...." The FAA's position is that low flying aircraft training in the south pattern are not unsafe. The

FAA has no regulations controlling the amount of noise an individual aircraft makes while in flight. No regulations are being violated, so **there is no corrective action the FAA can take**.

The staff report includes a chart showing there were 136,652 operations in 2021. This underrepresents the number of current operations. The most current data shows that through September of this year there have already been 139,015 operations. The airport is on pace to reach **185,000 operations** this calendar year. **This significantly higher number should be taken into account**.

In 2021, the FAA released a comprehensive study of the relationship between aircraft noise and community annoyance near airports. (Analysis of the Neighborhood Environmental Survey, dated February, 2021.) The study found that community annoyance is much higher than predicted by previous surveys which focused on multiple modes of transportation. This latest study focused only on aircraft noise and it predicts, for example, that nearly half (48.8%) of the population exposed to aircraft noise of 60 dB DNL are likely to be "highly annoyed." Community annoyance is real and the City should do whatever it can to minimize it.

Landing fees are a start but there are other options and the City needs to consider all of them.

Respectfully, Richard Root Torrance Resident Chair, LA Area Helicopter Noise Coalition

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

I no longer am able to use my large outdoor balcony overlooking our beautiful city. The planes from Torrance airport fly overhead every few minutes. They are not just loud, but their emissions drop 692 annual pounds of lead on us. This is extremely unhealthy for everyone, but especially for children and the elderly.

I have double-pane windows but this does not significantly reduce the horrible sound of their engines flying low over my home.

Recently, I installed a 4" multi-pleated Merv-rated filter in an attempt to reduce the lead entering my home, which is black, filthy—and toxic.

Flint, Michigan, became "famous" for its lead in their water. At least they can drink bottled water. We cannot buy bottled air. We have no choice in Torrance: WE BREATHE LEADED AIR

- 1. Please stop the sale of LEADED gasoline immediately.
- 2. Please eliminate ALL the flight schools. Planes should not be allowed to make circles over a populated, residential area. There are numerous airports in Southern California where pilots could practice their circles over the ocean or over the desert—over numerous unpopulated areas. Torrance airport should be for transportation—not practice.

Subject: AIRPORT - TOA

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

I no longer am able to use my large outdoor balcony overlooking our beautiful city. The planes from Torrance airport fly overhead every few minutes. They are not just loud, but their emissions drop 692 annual pounds of lead on us. This is extremely unhealthy for everyone, but especially for children and the elderly.

I have double-pane windows but this does not significantly reduce the horrible sound of their engines flying low over my home.

Recently, I installed a 4" multi-pleated Merv-rated filter in an attempt to reduce the lead entering my home, which is black, filthy—and toxic.

Flint, Michigan, became "famous" for its lead in their water. At least they can drink bottled water. We cannot buy bottled air. We have no choice in Torrance: WE BREATHE LEADED AIR

- 1. Please stop the sale of LEADED gasoline immediately.
- 2. Please eliminate ALL the flight schools. Planes should not be allowed to make circles over a populated, residential area. There are numerous airports in Southern California where pilots could practice their circles over the ocean or over the desert—over numerous unpopulated areas. Torrance airport should be for transportation—not practice.

Dear Torrance City Council,

I am writing to you to complain about the dramatic increased air traffic over my neighborhood. I live on Greenmeadows Ave by Richardson middle school and the amount of airplanes flying over my house and neighborhood is obnoxious. My wife and I are born and raised South Bay residents, I was born at Little Company of Mary, we are homeowners, taxpayers and voters. Both of us are working parents as well. Each day after work we typically enjoy sitting in our backyard catching up and decompressing after a long of work, but it is impossible to have a conversation when these airplanes are flying and circling around our house every 5 minutes. Not only is this obnoxious, this is also a potential threat to our property value. Who wants to move to a neighborhood with small, loud and even sometimes low-flying airplanes flying over them all the time?

These airplanes used to fly straight out to the ocean to circle around. They should enforce that again. Even when my son was playing little league baseball, these planes would drown out the games flying over and very low to the baseball fields.

Thank you for your time, Chris Berry Subject:

Subject: PUBLIC COMMENT - CITY COUNCIL MEETING NOVEMBER 8 - ITEM 91

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Dear Torrance City Council,

Because of airport noise, I, and many Torrance residents, are very unhappy living in our homes and are seriously concerned about the value of our homes decreasing. While we cannot change this, we know you can.

TOA Changes:

- increased number of private flights small aircraft and jets
- increased number of flight schools and the resulting thousands of repetitive, close-proximity student flights.
 **Not all of these flight schools are even tenants of TOA; plane ID numbers identify them from Long Beach, Van Nuys, and elsewhere all using TOA
- pilots not following TMC 51.2.3 e (and the city not trying to continue enforcement of it) and thus flying at lower altitude over homes (particularly those of us who live on the hill)
- a noise complaint system that is difficult and onerous to use

The results of those changes have literally ruined our lives here. (I urge you to read the comments posted on the online petition to hear how people feel. If you have empathy, it will break your heart to hear how miserable this has made people. https://www.ipetitions.com/petition/petition-to-reduce-torrance-airport-impacts-now)

Effects of TOA Changes on Your Constituents:

Can't Hear in Our Homes: The level of noise disrupts in-person conversation, TV, music, phone calls and more. We must stop the talk or TV, wait for the plane to go over, and then resume. Music is altered with the buzz of engines.

At minimum, it sounds like flies buzzing around most of the day. At maximum, it literally sounds like a war zone.

- Windows Kept Closed: We keep our windows closed to try to block the noise. We lose the benefit of good weather and no fresh air. And it costs more to have to use AC or fans.
- Safety Concerns: The chance of an accident may be rare, but flying so frequently, and so close to our homes' roofs, makes us fearful of an accident.

I've had two planes fly directly toward my window and I actually feared for my life. The neighbors above me on the hill have said it happens to them, too.

I've had objects on tables shake when a plane is within close proximity.

I see large shadows of planes through my windows that often scare my pets and me.

• Air Quality Worsened: Flying so frequently, and so close to our homes' roofs, brings the emissions of leaded fuel closer to us.

- **Being Outside is Off Limits:** Sitting on patios, working in our yards... all stopped because the noise makes it miserable outside. This is a main reason we live in SoCal and it's been taken away.
- Work has Been Hurt:
 - o Business calls and often, when I teach via Zoom, I can't hear the caller's speech and have to stop them.
 - The loud noise, most particularly, the repetitious nature of the student flights (easily one every one to five minutes), impedes your thinking and takes away your focus. When working, I lose time recovering from the plane disruption before I can back to work.

It wasn't this way before the changes...

We saw and heard flights far less frequently, not as loud, and not as close to our homes, so we weren't invaded by the noise. Torrance had its airport. Pilots could fly. And residents enjoyed their homes. If it wasn't this way before; it doesn't have to be this way now.

Please do something. Soon. Very soon. Make this a priority. Please. If changes aren't made, I see this easily going into a "close down the airport" movement. As miserable as I am, I wouldn't care, but I think you would.

Subject: PUBLIC COMMENT 11/8/22 City Council Meeting: TOA Airport agenda item

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

I've lived in the South Bay my entire life and owning a home in Torrance, I can attest to the fact the noise from the airport is getting worse and worse, especially since 2020. I am retired, and home as much now as before COVID, so I have heard it change on a daily basis.

The airport seems more like a large regional, even commercial, airport than a small local one. An airport with this much activity should not be in a residential neighborhood, as this one is. I live on the hill, and the close proximity of the planes now allowed is a travesty and ruining the peaceful enjoyment of our homes.

There are many times we have to stop conversation in our home because the planes make it so we can't hear. Times when I can't hear the TV or someone on the phone. And that's in the house with the windows shut. Being outside when the planes fly over the house is intolerable. It wasn't like this before you allowed changes at the airport.

I've read things that tell me you know of the airports' negative effects on the residents who live around it, so I won't get into that. I know that you should have some possible solutions already, and that you've been given possible solutions by others, as well, so I won't get into that.

I will say that I don't understand why something hasn't been done. At minimum, stop the incessant training flights to the west – the worst noise offenders. Get them out of the airport or make them fly a pattern that doesn't disturb residents. Then reduce the noise disturbance from the other planes. Do something. Now!

Why aren't you fighting for us? As our City Council, you should be working for us. Stop the noise that hurts our homelife.

Tom Rasmussen

Dear Council Members,

Airport noise has been unbearable over the past several years. I moved here with the understanding that Torrance enforced noise restrictions on the airport. It did, responsibly, for many years. I could host get-togethers in my backyard and attend remote meetings for work. It's actually embarrassing to do either now. It's not just the noise either. It is the frequency of flights.

Addressing the problem by instituting a temporary ban on new flight schools will not solve this problem. A moratorium on new flight schools does not reduce the current noise at all. It simply keeps the status quo which has become unbearable.

Please respect residents by AT LEAST enforcing the Torrance Municipal Code regarding airport noise.

Rick Johnson

From: Mercedes Ortiz

Re: Nov. 8 Airport agenda item—Torrance Municipal Airport (KTOA) Noise

Problem statement: Since moving to the Torrance Riviera seven years ago, the significant increase in KTOA noise has become a public nuisance. As a result, that noise interferes greatly with our family's enjoyment of our home's views, our deck, our quiet dinners, and our working from home.

Observations: KTOA noise is exacerbated by a *pattern of frequent aircraft take-offs* (some as little as within 1-4 min intervals) plus *flying too close/too low to us* (\leq 0.3 miles distance from us and < 1500' above our home which sits at an elevation of 234 ft). (Data available upon request.)

Beside the noise, low flying aircraft are inherently dangerous to all of us living on the ridge as it reduces the margin of error for these aircraft. It is a public safety issue.

Desired solution: It is within your purview to **abate this public nuisance by taking concerted action to implement** the following items which will help **to minimize the noise** and disruption in our lives as well as **to increase public safety**:

- Strict enforcement, esp. of 1500' minimum altitude policy
- Deny KTOA use to repeat offenders
- Charge landing fees for all aircraft
- Charge meaningful monetary fines for policy violations
- Use North Pattern for all training
- Limit # of training schools and require policy compliance

Thank you.

Mercedes Ortiz

Subject: PUBLIC COMMENT - CITY COUNCIL MEETING NOVEMBER 8 - ITEM 9

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

My name is Hydee Ong and I have lived in Torrance for over 20 years. I've made numerous complaints to Noise Abatement over the past year (too many to count). We need a way to ENFORCE EXISTING LAWS. I know most pilots follow the rules, but there are MANY who don't. When my family can't have dinner conversations without closing the windows because of airplane noise, it's a problem. When I have to close my windows during a work call due to airplane noise, it's a problem. When airplanes fly so low that the noise reverberates throughout my house, it's a problem. Why is the city not enforcing the rules? Why are the rights of tax-paying, Torrance voters secondary to flight schools and pilots, many of whom do not reside in Torrance?

STRICT ENFORCEMENT IN GENERAL

Voluntary measures are OK, but enforcement is better. Whenever possible, the City should strictly enforce its existing laws. Most pilots will follow airport recommendations, but there will always be some who don't. Most of the problems are probably caused by a small minority of pilots. The Torrance Airport Association cannot guarantee that all pilots will follow the recommended practices. So enforce rules wherever possible.

PROCESS

The pilots recently made a presentation before the Airport Commission. They hadn't sought input from non-pilot residents before coming up with their recommendations. They used limited data they constructed themselves to support their arguments. It's time for the City to put residents' needs over pilots'.

TRAINING IN THE SOUTH PATTERN is a big problem. Given that 60% of the airport's operations are training, it's becoming untenable. This was not allowed in the past, why is this allowed now? The city's NO-LEFT turn rule that was put in place in the 1950s helped TOA and the Community to coexist. This is no longer the case.

Furthermore, the city is not following its own MUNICIPAL CODE SECTION 51.7.3 which states that any aircraft that has violated 3 or more noise violations within a 3-year period will be denied the use of TOA. Why the non-enforcement? Why are the needs of pilots, many of whom are non-Torrance residents, a higher priority over tax-paying residents? This is a problem.

LANDING FEES

Currently the airport has no landing fees. Non-TOA-based aircraft are allowed to use the airport free of charge. In October of 2020, staff reported that landing fees could bring in an estimated net gain of \$257,000 to \$642,000 annually. It would also be a way of spreading the cost of the airport more fairly among all users. It might also have the added benefit of reducing the excessive amounts of touchand-go training. The City should reconsider landing fees.

CASPER QUESTIONS FOR STAFF

I have some questions. The City's Municipal Code says aircraft taking off to the West shall not turn left until reaching the ocean or an altitude of 1,500 feet. The new Casper system has been operational since August 15, 2022. I understand it identifies early-left turns and flags them for staff to investigate and follow up. So, how many of them were departures and how many were planes training in the South Pattern? Could the Council ask staff to respond to these questions?

EXCLUSION OF VIOLATION-PRONE AIRCRAFT

Currently the City does not follow its own Municipal Code Section 52.7.3, which states that any aircraft that has committed three or more noise violations within any three-year period shall be presumed to be a noisy aircraft and will be denied use of the airport. The City should strictly follow the Code.

LEASES TO TRAINING SCHOOLS SHOULD REQUIRE COMPLIANCE

Impacts from training have become intolerable. Especially in residential areas south of the airport. The City says, "Training in the South Pattern is discouraged to lessen impact on noise sensitive areas." On some days, there are well over 50 flights in the South Pattern. Noncompliance is commonplace. Flight schools based at the airport should be required to comply with the City's noise abatement recommendations as a condition of their leases. If they don't comply, their leases should be revoked.

BAN THE SALE OF LEADED FUEL

Most of the planes and helicopters at the airport use leaded fuel. Leaded gas was banned from vehicles and paint a long time ago because of its toxic effects, and it's especially harmful to the development of children. Yet the FAA has allowed it to continue to be used in aircraft which fly over our homes and schools and dump lead in the air we breathe. This has to stop. If the FAA won't do it, the City should. The County of Santa Clara recently banned the sale of leaded fuel at its airport. The City of Torrance should, too.

Sincerely,

Hydee Ong Mesa Street resident

Hello Sarah,

Here is the regulation 14 CFR 91.119 below and I have highlighted a pertinent section for you. The key here is "Except when necessary for takeoff or landing". The area you provided me of your home appears to be under the traffic pattern of Torrance Airport. Aircraft will be lower than 1,000' Above Ground Level when taking off and landing within the vicinity of the airport. The Long Beach Flight Standards District Office does not have the authority of changing flight paths or regulating noise for the area. I called you on Tuesday November 1 at 1037am in an attempt to speak with you regarding your concerns. I feel speaking to people is best as we can go over the pertinent regulations and explain the Long Beach Flight Standards District Office role. After that I emailed you. I hope this clarifies a few things and feel free to call or email me with any questions.

§ 91.119 Minimum safe altitudes: General.

Except when necessary for takeoff or landing, no person may operate an aircraft below the following altitudes:

- (a) Anywhere. An altitude allowing, if a power unit fails, an emergency landing without undue hazard to persons or property on the surface.
- (b) *Over congested areas.* Over any congested area of a city, town, or settlement, or over any open air assembly of persons, an altitude of 1,000 feet above the highest obstacle within a horizontal radius of 2,000 feet of the aircraft.
- (c) *Over other than congested areas.* An altitude of 500 feet above the surface, except over open water or sparsely populated areas. In those cases, the aircraft may not be operated closer than 500 feet to any person, vessel, vehicle, or structure.
- (d) *Helicopters, powered parachutes, and weight-shift-control aircraft.* If the operation is conducted without hazard to persons or property on the surface -

- (1) A helicopter may be operated at less than the minimums prescribed in <u>paragraph (b)</u> or <u>(c)</u> of this section, provided each person operating the helicopter complies with any routes or altitudes specifically prescribed for helicopters by the FAA; and
- (2) A powered parachute or weight-shift-control aircraft may be operated at less than the minimums prescribed in paragraph (c) of this section.

Subject: Public Comment

Nathan et. al.:

Your response is a disappointment. It's not that there is nothing you can do, it's that you don't want to or don't care to do anything. If "no other FAA entity" regulates noise, explain the existence of this FAA page and dedicated ombudsmen whom I've CC'ed: https://www.faa.gov/noise/inquiries

I'm aware the FAA is concerned with safety, with things like planes flying too low -- please then explain why just today, Saturday 11/5, planes have been recorded flying directly over my home below 1,000 feet in the air in circles for hours, which is both a noise AND safety issue? This is not an anomaly; this happens almost every single day!

- https://www.faa.gov/about/office_org/field_offices/fsdo/lgb/local_more/media/FAA_Guide_to_Low-Flying_Aircraft.pdf
 - o Following is Title 14 of the Code of Federal Regulations, Section 91.119 of the General Operating and Flight Rules, which specifically prohibits low flying aircraft... Over any congested area of a city, town, or settlement, or over any open-air assembly of persons, an altitude of 1,000 feet above the highest obstacle within a horizontal radius of 2,000 feet of the aircraft.
- W 225th St off Sepulveda & Hawthorne Blvd. Torrance, CA 90505 Saturday 11/5/22 10am-1:30pm and ongoing planes flying in continuous circles below 1,000 feet altitude:
 - o N182WL

- N379TA
- N206OU
- N68344
- N873MB
- N5767G
- N339SP 0
- N439LP
- Multiple Sling flight school planes that conveniently don't post their registration to the public
- Multiple Cessna flight school planes that conveniently don't post their registration to the public
- And more than I can continue to count

I reached out to the FAA and TOA originally with a civilized message asking for help, hoping to work together. Hoping that there would be a noise abatement program in place for homes so directly impacted by this noise & safety issue. I was hoping to be able to avoid inundating the Noise Abatement portal with complaints for each of these aircraft. 10/31/22 at 5:10pm Katherine at TOA admitted she saw my emails and told me the airport manager Rafael Herrera would call me directly -- he never did. The Noise Abatement Department there ignored my emails and calls. It's abundantly clear that both the FAA and Torrance Airport authority blatantly <u>DO NOT</u> CARE to curb the unlivable and unbalanced conditions these rapidly increasing airport operations are having on such a densely populated city. It must be admitted that the airport has overgrown its location and have control placed over operations, namely such that result in low-flying aircraft going around in circles like those of flight schools!

You are content to say "there's nothing we can assist with", "there's nothing we can do" and bounce people back and forth between your two entities. Well, there are thousands upon thousands of residents who feel the same way as me mobilizing against this issue. Trust that we will not continue to sit idly by (as you do every day) and we will continue to pressure you to REGULATE OPERATIONS, coming up next at the Torrance City Council meeting on 11/8/22.

Sarah Sedaghat

This email was sent through the Federal Aviation Administration's public website. You have been contacted via an email link on the following page: https://www.faa.gov/about/office_org/field_offices/fsdo/lgb/contact/

Message

To Whom it May Concern: We are reaching out for help because we are new residents of Torrance renting a single family home on West 225th St. off Sepulveda Blvd. While we were aware of the Torrance airport (TOA)'s presence prior to moving in and despite visiting the home several times, we did not realize we were under a path where planes would be flying in circles directly overhead constantly. We both work 100% from home during the week so planes flying low overhead and in circles all day have been extremely disruptive and concerning. In particular Monday 10/24, Thursday 10/27, and Monday 10/31 planes have been circling all day to the point where we hear them nearly every 30 seconds to a minute, with little to no breaks of silence throughout the day. Our landlord did not disclose or mention anything about the airport at any point during the application process. We do understand it was fully our responsibility to perform further research to decide if we would be able to accept the noise that would come along with living here. Unfortunately it's too late at this point now that we are locked into a 2 year lease. What, if any, assistance can be provided in terms of abatement/relief so that our new home can feel more livable and peaceful? Are home visits conducted to be able to assess the noise impact and advise accordingly? Thank you for your time and we look forward to your response. Sincerely, Sarah & Josh Sedaghat

http://www.faa.gov/about/office_org/headquarters_offices/avs/offices/afs/qms/LGB FSDO is dedicated to quality service, and we continuously seek to improve our services to you. Please provide your <u>feedback</u> with any suggestions improvements. We value your opinion.

Following up as we have not heard back on our previous email. Can you please tell us if there has been any recent rerouting, path changes, or other such activity at TOA that might be making the noise worse than usual? We are trying to understand what we can expect living here and what can be done to help us with peaceful enjoyment of our home.

Thank you,

Sarah & Josh Sedaghat

We are reaching out for help because we are new residents of Torrance renting a single family home on St. off Sepulveda Blvd. While we were aware of the airport's presence prior to moving in and despite visiting the home several times, we did not realize we were under a path where planes would be flying in circles directly overhead constantly.

We both work 100% from home during the week so planes flying low overhead and in circles all day have been extremely disruptive and concerning. In particular Monday 10/24 and today, Thursday 10/27 planes have been circling all day to the point where we hear them nearly every 30 seconds to a minute, with little to no breaks of silence throughout the day. Our landlord did not disclose or mention anything about the airport at any point during the application process. We do understand it was fully our responsibility to perform further research to decide if we would be able to accept the noise that would come along with living here. Unfortunately it's too late at this point now that we are locked into a 2 year lease.

According to your website, "The mission of the Noise Abatement office is to reduce aircraft noise and improve the Airport's compatibility with the surrounding community, through a reasonable approach of balancing Airport requirements with the Community's needs in order to ensure a livable environment." Given this mission we are asking for any assistance you can provide in terms of abatement/relief so that our new home can feel more livable and peaceful. Do you ever conduct home visits to be able to assess the noise impact and advise accordingly?

Thank you for your time and we look forward to your response.

Sincerely,

Sarah & Josh Sedaghat

Subject: Airport Noise for Torrance residents

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Dear Mayor and City Council members,

I am writing to express my extreme frustration with the increase of traffic and noise from the airport. After a long day of work, one of the joys we have in life is to sit outside in our small backyard that we had to pay over a million dollars to have and have a glass of wine or a tea and watch our child play outside. Lately this has been very difficult to do because of the terrible overhead noise of airplanes constantly circling over our backyard. Forget about having a dinner outside on our outdoor patio table because the noise does not allow for a conversation. We feel like we can no longer enjoy our backyard that we worked so hard to purchase and put so much effort into to make beautiful.

The noise is so frustrating and not what we expected when we purchased this home in 2017. It is impacting our quality of life and our property value. These people should be practicing over the ocean, not over our homes circling over and over again constantly. the noise of their planes drowning out our conversation and likely polluting our air.

Please protect the residents of Torrance and do something about this noise. Enough is enough.

Regards,

Megan

Subject: Torrance Council Meeting November 8th--Airport Agenda Item Noise Level of Airport

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

To All of the Torrance City Council,

This is in regards to the airplanes flying in and out of Torrance airport. For over a year now, airplanes have been flying very low and making early left turns over my home and neighborhood. It is very loud and dangerous when they fly over. My windows shake from the vibration of the plane engine noise. I have tried eating in my backyard patio area many times but because of the planes flying overhead, I have to come back inside to eat instead because I can not have a conversation with my family or friends when the planes are flying over due to all of the noise. The flight schools are doing touch and gos all day long circling. This is so frustrating and a nuisance. The noise and air pollution are decreasing my quality of life (health, peace and quiet) living in my neighborhood. I also do gardening in my front and backyard but it is not possible when the planes are flying overhead. I shouldn't have to live like this. My neighbors are furious too. My family and neighborhood shouldn't have to feel as if confined to our homes inside because of the planes. I have been living in Valmonte for over 22 years now. If I knew these planes were flying over 22 years ago, my husband and I would have never moved here. I want the airport to remain where it is. Most pilots go by the rules and are respectful and courteous to residential areas but some pilots are not respectful and do not give a crap about the neighborhoods. Action needs to be taken on pilots that are not obeying the rules flying way too low and making early

left turns. It seems the Noise Monitoring system is not working or is not being enforced since I see more and more planes coming each day making early left turns in my neighborhood. Flight schools need to stop instruction here now. Student pilots are practicing here also from other cities because other airports have put a stop to flight schools. Also, a fee should be established/charged every time a plane lands. This would also benefit the city. One more thing--I hear planes taking off early before 8:00a.m. and also hear planes taking off after 8:00 p.m. There is a curfew for a reason but of course, there are pilots that just don't care. There needs to be fines and consequences for this to deter this behavior for not obeying curfew times. With all of these concerns, action needs to take place ASAP for our health and well being. Also, it is imperative to enforce the no early left turn rule and no planes here should be using leaded fuel

Thank you, Meredith Silk

Nathan:

The issue is the incessant touch and go's over residents homes for hours on end. These are what's created unlivable conditions for residents. We are not able to work from home, open windows, use our backyards, have an uninterrupted conversation at family dinner... Bottom line, we have a legal right to peaceful enjoyment of our homes and that has been taken away by the allowance of unregulated touch and go behavior. That is what needs to be addressed.

When will the touch and go's be controlled or eliminated? And why are there no home sound insulation programs or other such abatement solutions being provided??

I would be happy to have a representative visit my home on a day like the one in which I emailed you so they can see what it's like, and I can also show them the videos I have of 5 planes circling over in only a 3 minute period. Again, this happens nearly every day. I have spoken to several residents and they all agree it wasn't like this until recently. This needs to be addressed, that's all there is to it.

Sarah

Hello Sarah,

Here is the regulation 14 CFR 91.119 below and I have highlighted a pertinent section for you. The key here is "Except when necessary for takeoff or landing". The area you provided me of your home appears to be under the traffic pattern of Torrance Airport. Aircraft will be lower than 1,000' Above Ground Level when taking off and landing within the vicinity of the airport. The Long Beach Flight Standards District Office does not have the authority of changing flight paths or regulating noise for the area. I called you on Tuesday November 1 at 1037am in an attempt to speak with you regarding your concerns. I feel speaking to people is best as we can go over the pertinent regulations and explain the Long Beach Flight Standards District Office role. After that I emailed you. I hope this clarifies a few things and feel free to call or email me with any questions.

§ 91.119 Minimum safe altitudes: General.

Except when necessary for takeoff or landing, no person may operate an aircraft below the following altitudes:

- (a) **Anywhere.** An altitude allowing, if a power unit fails, an emergency landing without undue hazard to persons or property on the surface.
- (b) *Over congested areas.* Over any congested area of a city, town, or settlement, or over any open air assembly of persons, an altitude of 1,000 feet above the highest obstacle within a horizontal radius of 2,000 feet of the aircraft.
- (c) **Over other than congested areas.** An altitude of 500 feet above the surface, except over open water or sparsely populated areas. In those cases, the aircraft may not be operated closer than 500 feet to any person, vessel, vehicle, or structure.
- (d) *Helicopters, powered parachutes, and weight-shift-control aircraft*. If the operation is conducted without hazard to persons or property on the surface -
 - (1) A helicopter may be operated at less than the minimums prescribed in <u>paragraph (b)</u> or <u>(c)</u> of this section, provided each person operating the helicopter complies with any routes or altitudes specifically prescribed for helicopters by the FAA; and
 - (2) A powered parachute or weight-shift-control aircraft may be operated at less than the minimums prescribed in paragraph (c) of this section.

Nathan et. al.:

Your response is a disappointment. It's not that there is nothing you can do, it's that you don't want to or don't care to do anything. If "no other FAA entity" regulates noise, explain the existence of this FAA page and dedicated ombudsmen whom I've CC'ed: https://www.faa.gov/noise/inquiries

I'm aware the FAA is concerned with safety, with things like planes flying too low -- please then explain why just today, Saturday 11/5, planes have been recorded flying directly over my home below 1,000 feet in the air in circles for hours, which is both a noise AND safety issue? This is not an anomaly; this happens almost every single day!

- https://www.faa.gov/about/office org/field offices/fsdo/lgb/local more/media/FAA Guide to Low-Flying Aircraft.pdf
 - Following is Title 14 of the Code of Federal Regulations, Section 91.119 of the General Operating and Flight Rules, which specifically prohibits low flying aircraft... Over any congested area of a city, town, or settlement, or over any open-air assembly of persons, an altitude of 1,000 feet above the highest obstacle within a horizontal radius of 2,000 feet of the aircraft.
- W 225th St off Sepulveda & Hawthorne Blvd. Torrance, CA 90505 Saturday 11/5/22 10am-1:30pm and ongoing planes flying in continuous circles below 1,000 feet altitude:
 - o N182WL
 - o N379TA
 - o N2060U
 - o N68344
 - o N873MB
 - o N5767G
 - o N339SP
 - o N439LP
 - o Multiple Sling flight school planes that conveniently don't post their registration to the public
 - o Multiple Cessna flight school planes that conveniently don't post their registration to the public
 - o And more than I can continue to count

I reached out to the FAA and TOA originally with a civilized message asking for help, hoping to work together. Hoping that there would be a noise abatement program in place for homes so directly impacted by this noise & safety issue. I was hoping to be able to avoid inundating the Noise Abatement portal with complaints for each of these aircraft. 10/31/22 at 5:10pm Katherine at TOA admitted she saw my emails and told me the airport manager Rafael Herrera would call me directly -- he never did. The Noise Abatement Department there ignored my emails and calls. It's abundantly clear that both the FAA and Torrance Airport authority blatantly <u>DO NOT CARE</u> to curb the unlivable and unbalanced conditions these rapidly increasing airport operations are having on such a densely populated city. It must be admitted that the airport has overgrown its location and have control placed over operations, namely such that result in low-flying aircraft going around in circles like those of flight schools!

You are content to say "there's nothing we can assist with", "there's nothing we can do" and bounce people back and forth between your two entities. Well, there are thousands upon thousands of residents who feel the same way as me mobilizing against this issue. Trust that we will not continue to sit idly by (as you do every day) and we will continue to pressure you to **REGULATE OPERATIONS**, coming up next at the Torrance City Council meeting on 11/8/22.

Message

To Whom it May Concern: We are reaching out for help because we are new residents of Torrance renting a single family home on West 225th St. off Sepulveda Blvd. While we were aware of the Torrance airport (TOA)'s presence prior to moving in and despite visiting the home several times, we did not realize we were under a path where planes would be flying in circles directly overhead constantly. We both work 100% from home during the week so planes flying low overhead and in circles all day have been extremely disruptive and concerning. In particular Monday 10/24, Thursday 10/27, and Monday 10/31 planes have been circling all day to the point where we hear them nearly every 30 seconds to a minute, with little to no breaks of silence throughout the day. Our landlord did not disclose or mention anything about the airport at any point during

the application process. We do understand it was fully our responsibility to perform further research to decide if we would be able to accept the noise that would come along with living here. Unfortunately it's too late at this point now that we are locked into a 2 year lease. What, if any, assistance can be provided in terms of abatement/relief so that our new home can feel more livable and peaceful? Are home visits conducted to be able to assess the noise impact and advise accordingly? Thank you for your time and we look forward to your response. Sincerely, Sarah & Josh Sedaghat

Honorable Mayor Chen and City Council Members:

I'm a Torrance resident in District 3. I work from home full time and I cannot believe how LOUD AND CONSTANT the airplane noise is most days. Just last week we had beautiful weather all week. Could I open my windows to enjoy the weather? Nope. Could I go outside and enjoy the weather in my backyard (which I worked hard for)? Nope. Could I stay focused at my full time job? Nope. I could go on and on, but what matters is that the quality of life for myself and neighbors has taken a huge nosedive in recent times as a direct result of the increase of airport operations out of TOA. The occasional plane flying above is fine, but the non stop circling, the non stop touch-and-goes that don't allow you a A SINGLE MOMENT OF PEACE is COMPLETELY UNACCEPTABLE, and it blows my mind that you have even let it get to this point. How can this level of activity be considered acceptable for a dense city like Torrance? Not to mention the unseen, yet more important, threat of exposure to leaded gas. This is serious.

I invite all of you to come to my house for a day to see and feel what we are experiencing. The constant noise, the shaking of your home, along with the inability to open windows, to stay focused, to enjoy your home, to enjoy the company of your loved ones, to enjoy a meal. From morning till evening, I ask that you come experience this yourself. Most of you will leave with higher blood pressure, a bad headache, and a deep sense of anger that the people you trusted have let you down.

You have a responsibility to ensure the peace and livability of your many residents, YOUR CONSTITUENTS, which is being downright ignored and disregarded in favor of the few that benefit from the airport. We no longer have the peace and livability that you have promised us. It's time to reconsider and make serious changes immediately, not in a few months, not in a year, NOW.

To: CouncilMeetingPublicComment@TorranceCA.gov

Dear Council Members,

I would like to express my concern over the increased noise from the Torrance Airport training classes that have been flying over my home for the past two years.

Since 1965, when my family moved to Marble Estates, I have happily lived next to the Torrance Airport. My father was a pilot, and we spent many years flying out of Torrance, well aware of the guidelines in place for safe flying while maintaining a peaceful partnership with the community on the ground. When I purchased my home in the Hollywood Riviera in 2016, I did so with the understanding of what the airport rules were, as stipulated in the Torrance MC 51.2.3 (e):

Take Offs and Landings: Aircraft taking off to the west shall not turn left until they have either reached the ocean or attained an altitude of fifteen hundred (1,500) feet.
I am aware of the correspondence between Mr. Jim Gates and the FAA, as well as the follow-up letters from Ms. Linda Cessna and Mr. Patrick Sullivan re TOA's request for clarification on the interpretation and enforcement of the pre-ANCA status of our MC 51.2.3(e), which the FAA did not address. Our Code is pre-ANCA, having been in place since before the FAA's Airport Noise and Capacity Act of 1990, and should be considered grandfathered and therefore enforceable. I would like the City Council to enforce the Municipal Code as written, just as they would any other municipal code laws.
I made an investment in purchasing my home with the expectation that the Torrance Municipal Code would be enforced, as any other laws provided by the City of Torrance for the safety and peaceful lifestyle of its community. Please honor your commitment to enforcing the laws of our city, for the community who are depending on you to do so.
Sincerely,
Elizabeth Spatz Hollywood Riviera

Honorable Mayor and City Council:

We purchased our home on Mesa Street in 2016 and made every attempt beforehand to make sure the airport wouldn't be a problem. We had spoken to the noise abatement office and staff on several occasions before purchasing our home and were assured the airport wouldn't be a problem due to our location and distance and were also shown maps and drawings. We also came over to the neighborhood on several occasions, parked and listened. We spoke to neighbors and one actually moved due to the noise. After all of the input we received, we decided to take a chance and purchase our home. Since we have lived here, the circling of flights over our home have gotten worse, there have been plane crashes in the Torrance area, and the pilots are flying very low over our home. We also worry what this may do to the value of our home in the future and safety issues. We hope you will consider addressing this issue and the safety of the residents. We appreciate your help.

Pat and Diane Cleary

Subject: Airport noise

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

My name is Heidi and I am a resident of Torrance.

In order to fix the problem our City Government whom is employed by the tax paying Torrance Residents must take action as follows.

- * Implement a \$45 landing fee
- * Enforce current Municipal Code
- * Discontinue Flight School Training at TOA
- * Implement a system of progressive monetary fines for violations, revoke the airport privilege for repeat offenders.
- * Ban the sale of leaded fuel

As residents of Torrance, we the people should be allowed to come home to some measure of peace after the stresses of the day and not the constant bombardment of planes going around and around and around from the flight schools or disrectful pilots dive bombing our homes. It was a poor decision of our City Government to allow this in the first place.

Sincerely, Heidi

Good Afternoon Ms. Sedaghat ~

There is no recommendation being provided by staff, as this report is just an update to the City Council on the Airport Noise Abatement System, Early Left Turn, and Airport Operations. However, under Airport Operations, staff is seeking direction from the City Council on the implementation of landing fees, which could potentially address the training performed by flight schools. I hope this answered your question.

Michelle,

Thank you for clarifying although I'm still confused. I don't see anything being proposed directly in the sections you cited as it's all just background information/data, yet the recommendation is for the City Council to accept and file the Torrance Municipal Airport (Zamperini Field) Noise Abatement and Airport Operations update. Should the City Council agree, what exactly is it that they'd be agreeing to?

I would like to know how specifically the City Council is going to address incessant touch and go training performed by the local flight schools over residents' homes. I and countless other citizens have had our right to peaceful enjoyment of our homes evaporated due to the complete lack of regulation of flight school operations.

On Mon, Nov 7, 2022 at 11:31 AM Ramirez, Michelle < MRamirez@torranceca.gov > wrote:

Good Morning Ms. Sedaghat ~

It is broken down under the section "Background and Analysis". The first discussion is of the Airport Noise Monitoring System (page 1), the second discussion is of the Early Left Turn (page 2), and the last discussion is the Airfield Operations Status (page 4). I'm not sure if you were looking for something is particular but all three topics are discussed within the staff report.

Nathan et. al.:

Your response is a disappointment. It's not that there is nothing you can do, it's that you don't want to or don't care to do anything. If "no other FAA entity" regulates noise, explain the existence of this FAA page and dedicated ombudsmen whom I've CC'ed: https://www.faa.gov/noise/inquiries

I'm aware the FAA is concerned with safety, with things like planes flying too low -- please then explain why just today, Saturday 11/5, planes have been recorded flying directly over my home below 1,000 feet in the air in circles for hours, which is both a noise AND safety issue? This is not an anomaly; this happens almost every single day!

- https://www.faa.gov/about/office org/field offices/fsdo/lgb/local more/media/FAA Guide to Low-Flying Aircraft.pdf
 - o Following is Title 14 of the Code of Federal Regulations, Section 91.119 of the General Operating and Flight Rules, which specifically prohibits low flying aircraft... Over any

congested area of a city, town, or settlement, or over any open-air assembly of persons, an altitude of 1,000 feet above the highest obstacle within a horizontal radius of 2,000 feet of the aircraft.

- W 225th St off Sepulveda & Hawthorne Blvd. Torrance, CA 90505 Saturday 11/5/22 10am-1:30pm and ongoing planes flying in continuous circles below 1,000 feet altitude:
 - o N182WL
 - o N379TA
 - o N206OU
 - o N68344
 - o N873MB
 - o N5767G
 - o N339SP
 - o N439LP
 - o Multiple Sling flight school planes that conveniently don't post their registration to the public
 - o Multiple Cessna flight school planes that conveniently don't post their registration to the public
 - o And more than I can continue to count

I reached out to the FAA and TOA originally with a civilized message asking for help, hoping to work together. Hoping that there would be a noise abatement program in place for homes so directly impacted by this noise & safety issue. I was hoping to be able to avoid inundating the Noise Abatement portal with complaints for each of these aircraft. 10/31/22 at 5:10pm Katherine at TOA admitted she saw my emails and told me the airport manager Rafael Herrera would call me directly -- he never did. The Noise Abatement Department there ignored my emails and calls. It's abundantly clear that both the FAA and Torrance Airport authority blatantly <u>DO NOT CARE</u> to curb the unlivable and unbalanced conditions these rapidly increasing airport operations are having on such a densely populated city. It must be admitted that the airport has overgrown its location and have control placed over operations, namely such that result in low-flying aircraft going around in circles like those of flight schools!

You are content to say "there's nothing we can assist with", "there's nothing we can do" and bounce people back and forth between your two entities. Well, there are thousands upon thousands of residents who feel the same way as me mobilizing against this issue. Trust that we will not continue to sit idly by (as you do every day) and we will continue to pressure you to **REGULATE OPERATIONS**, coming up next at the Torrance City Council meeting on 11/8/22.

Hello Sarah,

We received your email below. Unfortunately there is nothing we can assist you with as we do not regulate noise and no other FAA entity does either. I personally live near the Los Alamitos Joint Forces Training Base and have helicopters flying overhead all day until 1100pm at night. There is nothing I can do about it unless I chose to move. Sorry there is not more good news I could provide.

Message

To Whom it May Concern: We are reaching out for help because we are new residents of Torrance renting a single family home on off Sepulveda Blvd. While we were aware of the Torrance airport (TOA)'s presence prior to moving in and despite visiting the home several times, we did not realize we were under a path where planes would be flying in circles directly overhead constantly. We both work 100% from home during the week so planes flying low overhead and in circles all day have been extremely disruptive and concerning. In particular Monday 10/24, Thursday 10/27, and Monday 10/31 planes have been circling all day to the point where we hear them nearly every 30 seconds to a minute, with little to no breaks of silence throughout the day. Our landlord did not disclose or mention anything about the airport at any point during the application process. We do understand it was fully our responsibility to perform further research to decide if we would be able to accept the noise that would come along with living here. Unfortunately it's too late at this point now that we are locked into a 2 year lease. What, if any, assistance can be provided in terms of abatement/relief so that our new home can feel more livable and peaceful? Are home visits conducted to be able to assess the noise impact and advise accordingly? Thank you for your time and we look forward to your response. Sincerely, Sarah & Josh Sedaghat

Subject: Increase in noise from low flying aircraft from Torrance Airport

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Dear Mayor and Council Members

I am writing this letter to inform you how intrusive the engine noise has become in the most recent months from the low flying aircraft. The Attachment to this letter shows the repetitive nature of the low flying flights over our neighborhood in the most recent months. Such as on 9/28/22 three fights within 4 minutes (average of one flight every 1.3 minute), on10/7/22 five flights within 22 minutes (average of one flight every 4.4 minutes, and on 10/19 six flights within 25 minutes (average one flight every 4.2 minute). These flights were heard and recorded by me sittings in home office working at my computer and does not represent the total number of flights that flew over our house and neighborhood on those days. I want to share a little of our background living in Torrance within the close proximity of the airport. My wife and me have lived in this home at 4803 Greenmeadows Ave for 55 years, and prior to those 2 years on Madison St. just south of PCH. We are a custom to the aircraft flights and the noise that accompanies them with acceptance and no issues, but this is different because of the low level of the flights and the accompany engine noise. I appreciate any help the Mayor and Council can put forward on this issue.

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

The residents of Torrance, including myself, have realized the lack of integrity of the City in dealing with the airport noise.

We have smartened up to your so called "process" in dealing with this issue:

- 1. You make it as difficult as possible to file a complaint by not accepting Airnoise complaints. Airnoise is simply email, a form of communication which you accept. How can you pick and choose what type of complaints you accept? This would result in thousands of more documented complaints.
- 2. You do nothing to those who break the current noise rules. It is well documented that repeat offenders have not been banned from flying at TOA.

For goodness sakes you send fly friendly letters, how ridiculous is that?

On top of that you have a council member's son who flies at one of the schools at TOA.

How is the Council going to treat this conflict of interest????

Let me remind you that you represent the residents of Torrance. Not the pilots. Not your son flying at TOA. Not the flight schools who you personally benefit from.

You better start coming up with some material changes to fix the noise issue before the residents don't want to make a compromise and will settle for nothing less than shutting the whole airport down.

Subject: Public Comment - Item 91

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

While I have lived in the City of Torrance for almost 28 years (22 of them in the flight path) I have never seen or had the amount of airplane traffic and noise as over the last 3 years. I would like to address some of the pints in the staff report that will be discussed during the City Council Meeting.

LANDING FEES

The staff report recommends that the Council provide direction on landing fees. That would be a small step in the right direction. It would provide additional revenue for the airport as well as supplementing the General Fund. Plus, it would be a fairer way to spread the costs among all users of the airport. The Council should direct staff to issue an RFP. However, landing fees alone will not resolve the significant noise problem as training schools will pay the fees, pass the costs off to their students, and continue to operate at the airport while conducting repetitive flights in the both the north and south training patterns. It is the duty of our elected officials of the city council to consider other options.

NOISE VIOLATIONS

The staff report states that "Since going live, the City has received 919 noise complaints. Of this number, 'only' 11 were found in violation of the City's Noise Ordinance." This quote significantly understates the problem at hand as it doesn't mention all violations. Casper's Flight History shows that in its first 11 weeks, there have been at least 112 noise violations automatically detected by the City's noise monitors, which is an average of over 10 violations per week. Furthermore, those 112 noise violations are only the ones that flew close enough to a monitor to be detected. The City's noise limits apply anywhere outside the airport boundaries, not just at or near the noise monitors. Casper reports show that 95% of the loudest noise events occur at monitors 1 and 5, to the east and west of the airport. There are large gaps of a half mile on either side of those monitors and pilots can easily fly through them causing violations in residential neighborhoods without being detected by monitors. The City should close the gaps by adding additional monitors to where they will do the most good to the east and west of the airport.

Lastly, the City doesn't follow its own Municipal Code. Section 51.7.3 states that any aircraft or pilot that causes three noise violations within any three-year period shall be presumed to be a noisy aircraft and will be banned from the airport, without a hearing board process, but with an appeal to the Airport Manager. A review of Casper's Flight History indicates that there is a Beechcraft Bonanza with 19 noise violations in the past 3 months. It takes off almost every day. Why hasn't this plane been banned and why doesn't the City follow the procedure required by Municipal Code Section 51.7.3?

History shows that voluntary measures don't work. Ten years ago, without any notice to the public, staff abandoned the City's Code and went to a voluntary approach. It failed and violations spiraled out of control. A review of public records shows that in April, 2012, there were 18 aircraft with violations ranging from 5 to 28 each in the prior three-years. One plane had 28 violations! The City just kept sending fly-friendly letters and took no enforcement action. The Torrance

Airport Association can't guarantee that all pilots will comply with the rules. History shows that voluntary measures don't work, the City should strictly follow its existing code which requires that aircraft and pilots be banned after three violations.

COMPLAINT SYSTEMS

The staff report states the City has received 919 noise complaints. The NoiseLab website states the staff will not process auto-generated complaints. Does the number 919 consist only of complaints filed with NoiseLab or is it all complaints, including those filed by phone, email, and Airnoise? How many complaints have been filed by each of these methods?

AIRPORT OPERATION TOTALS

The staff report includes a chart showing there were 136,652 operations in 2021. This underrepresents the number of current operations. The most current data shows that, in the past 12 months (October 2021 through September, 2022), there were 168,675 operations. Furthermore, the trend is increasing and the airport is on pace to reach 185,000 operations for calendar year 2022. Moreover, 60% of the operations are local training. These current numbers are significantly higher than those reported by staff. They must be taken into account as part of the number of operations.

USE OF MONETARY FINES

Currently, planes and pilots that have multiple violations are sent to City hearing boards for adjudication. This is a lengthy and costly process. Three hearings with guilty verdicts are required before a plane or pilot is banned from the airport. On the other hand, Santa Monica airport uses a system of progressive monetary fines before banning an aircraft. For 2018, Torrance's violation rate was 7 times higher than Santa Monica (4.2 violations per 1000 operations vs 0.6 violations per 1,000 operations). Santa Monica's enforcement method is far better at gaining compliance. The city should look into changing its method of enforcement to monetary fines instead of hearing boards.

TRANSPARENCY

For transparency, the public should be able to see which aircraft are violating City laws and verify they are being held accountable. Every day Casper Flight History's "Top 5 noise events" shows the highest dB readings and the type of aircraft. But it doesn't show the aircraft N-Number so the public can't verify enforcement. N-Numbers are public information. Flight Tracker shows N-Numbers, but Flight History doesn't. For many years, the City of Santa Monica has published N-Numbers of its violators every month. Why doesn't Torrance ask Casper to include the aircraft N-Number in their Top 5 noise events?

It's very frustrating when noise abatement staff refuses to answer simple questions from the public. When responding to complaints, why doesn't staff provide Lmax and SENEL dB levels when requested, instead of making the public file requests under the Public Records Act which takes weeks to get a response?

OVERALL

In order to seriously address the impacts, the City needs to consider the additional options, not just landing fees or flight school moratoriums:

Enforce the no-left-turn law or contract out the control tower Use stronger language in lease agreements

Better placement of noise monitors Use of monetary fines Follow the Municipal Code (TMC Section 51.7.3 - Ban violation-prone aircraft and pilots) Close the south runway Close and reopen as a private airport Ban the sale of leaded fuel

The City needs to know all the options it has. The Council should direct staff to analyze all these options and report back to the Council on their potential to reduce the airport's impacts.

Regards, Lawrence Ruben

Dear Torrance City Council Members:

As a California-licensed real estate broker. My primary Listing and Selling area is New Horizons, South Bay.

Because of the airport's increased flights and resulting noise, it is becoming harder and harder to sell properties in New Horizons. I used to be able to tell clients how peaceful and quiet it is there, but that is no longer true. Now, when I show properties, in what should be a peaceful retirement community, I have to wait until the airplanes above have left the vicinity to continue talking to my clients because the noise prevents us from hearing each other. I have lost many a sale in New Horizons due to airport noise. That hurts the Sellers and hurts the Torrance Real Estate business as a whole. Not only does it subvert business, it disturbs the elderly residents of New Horizons. They have no desire to live in what sounds like a war zone!

The effect of the airport noise carries over to non-senior homes, as well. Real estate is valued mostly by supply and demand. And there is no demand for noisy locations. In a suburban setting, noises this loud and frequent are considered unacceptable. I repeat, I have lost sales due to this at New Horizons. I can only imagine how many sales have been lost in other Torrance neighborhoods in the flight path of these menacing planes. I can't tell you how embarrassing it is to say to a client asking questions: "please wait till the plane flies over and then I'll answer your question".

Many times, it is the same plane flying round and round and round. Other times is sounds like a combination of World Wars. Some planes seem to have high performance engines with raw exhaust that sputters like machine gun fire. This is no way to live. This is a small group of people ruining the right of peaceful enjoyment of homeowners. It's just not right!

There are economic influences that affect value, too, and with the current conditions of higher mortgage rates influencing sales prices, I can't define the exact cost the airport has on Torrance home sale prices. However, I can confidently say that the demand for a noisy neighborhood is nonexistent. People want peace and quiet around their homes, retired or not.

Less sales (demand) results in a longer time on the market and lowered prices. And, of course, with lower property values, comes lower property taxes. Lower property taxes hurt our schools and infrastructure. This puts Torrance in a no-win "tailspin".

All this so a small group of individuals can act like children, playing "Ring Around the Rosey" in the sky. There is a nearly endless Pacific Ocean within 2 minutes of the airport by plane. Move the fun and games out there. Why does it have to

be right above our heads sounding like an incoming "strafing run" on the neighborhood. The fish are under water and can't hear. They are better suited for this seemingly endless auditory torture.

Please stop the circling planes, move them to the ocean and reduce the flight noise! Thank you for your anticipated prompt attention to this pressing matter.

Sincerely,

Nick Blaney

Item 91 - Solutions to Reduce Noise and Activity at Torrance Airport

From: Jon Dearing <

Sent: Tuesday, November 8, 2022 1:23 PM **To:** CityCouncil < CityCouncil@torranceca.gov>

Cc: Chaparyan, Aram <AChaparyan@TorranceCA.gov>; Sullivan, Patrick <PSULLIVAN@TorranceCA.gov>; Ramirez,

Michelle <MRamirez@TorranceCA.gov>; Megerdichian, Shant <SMegerdichian@TorranceCA.gov>

Subject: Item 91 - Solutions to Reduce Noise and Activity at Torrance Airport

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Dear Mayor and City Councilmembers:

I'm writing regarding Item 9I on tonight's agenda on the increasing noise and flight activity from Torrance Airport. Thank you for advancing consideration of this issue.

I am a homeowner in Southwood Riviera, west of the Torrance Airport, in District 5. I am one of hundreds of residents who are concerned about increased noise and activity from operations at the Airport, as documented in our petition.

While it is helpful to have the noise monitoring system instituted as of this year, this step should only be the beginning of efforts to curb airport noise and to operate the city's airport responsibly on behalf of residential communities that surround the airport on all sides.

As the City Council's review continues, the following considerations should be addressed further:

• Significant Increase in Flight Activity: Based on the monthly report of Airfield Operations at Torrance Airport, through September 2022 there have been 139,015 operations so far this year. Through September of 2021, there were 106,992 operations. This represents a 30% increase in operations just this year. If this trend holds for the remainder of the year, based on 2021's full-year total of 136,652 operations, a 30% increase represents a total of 177,552 operations projected for 2022. This total would far exceed the highest year ever reported in the past 15 years, when there were 153,498 operations in 2008.

The staff report on today's agenda omits the 2022 year-to-date data which is showing a significant increase in flight activity. Instead, the report frames the situation as a declining trend by decade, going back to the 1990s, before most of us started living here. Advocates of the increased flight activity have provided data going back to the 1960s, before nearly all of us lived here. This is a selective viewpoint that clearly favors the advocates of increased flight activity and the Airport Commission.

Noise pollution impacts quality of life in the same way as air pollution. Today, we don't ignore strategies that can reduce air pollution just because our air is better than it was in the days of smog alerts from decades ago. In the same way, we shouldn't be ignoring noise pollution because it's

somehow better than levels seen decades ago. We should be comparing it to our most recent decade, and the trend is clearly rising.

- More Flight Schools Than Any Other Airport: Currently, there are at least 7 flight schools in operation at Torrance Airport. However, at all surrounding municipal airports in greater LA, there are no more than 3 flight schools in operation. Why should Torrance have more than double the flight schools of anywhere else? How did this happen?
- Environmental Impacts from Adding Flight Schools: The City did not study the environmental impacts of increasing the number of flight schools and corresponding flight activity.
- Lack of Landing Fees: Currently, Torrance Airport does not assess a landing fee. However, landing fees are charged at other surrounding municipal airports. Additionally, the landing fee amount recommended in the staff report appears lower than the fee amounts charged at other comparable municipal airports. Please do more due diligence on the fee amount to achieve parity with other airports.
- Questionable Flight Training Activity: There is evidence of planes departing other airports and arriving at Torrance Airport to conduct touch-and-go training. This is happening on a nearly daily basis as supported by flight logs. Why do we let planes come from surrounding airports to do training runs over our homes?
- Lack of Oversight and Enforcement by Airport Noise Hearing Board: The Airport Noise Hearing Board, established pursuant to Torrance Municipal Code 51.7.4, is charged with adjudicating alleged violations of the Torrance Municipal Code related to Airport noise. According to the city's website, the Board has not met since May 2019, which was the only meeting that year. In 2018, there were 5 Board meetings. In 2017, there were 6 Board meetings.

In light of historical activity, it is very doubtful there have been zero eligible enforcement actions in over 3 years of operations since May 2019. Airport advocates view this as a "win" and they are engaging the FAA directly to steer rules in their favor. Why isn't the City being proactive to protect residents and restore these enforcement mechanisms?

• **Noise Monitoring:** The noise monitoring system was recently reinstalled. However, it is not clear whether there are enough noise monitors to adequately capture all area residents who are impacted by noise activity.

Please continue t	to address e	each of these	e items. Yo	our attention	and support	is greatly	appreciated.

City Council Agenda 11-08-22, Item 9I & Staff Report

Airport Noise and Landing Fees

Torrance Airport is a rare resource, and the City Council doesn't see it. The Council is now considering ways to kill the airport. When landing fees were brought up in April 2020, it was because the city was broke and looking for money. Today, landing fees are back on the table for a different reason – to kill business in "Business Friendly Torrance."

Landing fees are extremely rare for a reason. They drive away revenue producing companies and people. Your Staff Report fails to note that most of the airports mentioned with fees (Oxnard, Camarillo, Santa Barbara & Napa) only charge aircraft over 12,500 lbs., which excludes all but the jets using Torrance!

In April 2020, I wrote the City Council saying that I expect the city will replace the current noise monitoring system to satisfy the public. It will be expensive, and unfortunately, will not reduce complaints. An 82 db noise limit or 88 SENEL is very loud, and nearly all aircraft are far quieter. The new noise system has not reduced complaints *because it does not reduce annoyance*.

On September 8th, I gave a presentation to the Airport Commission on work done by the Torrance Airport Association's Noise Abatement Advisory Committee to get to the root of the problem – which is not noise violations or "early left turns." The problem is there is no guidance to pilots on how to fly friendly. Using our own airplanes and those of our flight schools, we have done extensive flight testing at our own expense and found ways to fly the traffic patterns while reducing neighborhood noise up to 50-75%. We have created signs for each runway for the city to post, but they drag their feet and have not taken action yet. These three steps are what must be done, and we are here to help.

- 1. Post Point-of-Departure noise abatement signs at runway ends. They are the last thing a pilot sees before takeoff.
- 2. Publish noise abatement rules and requests in the FAA Airport/Facility Directory and in brochures, and online flight planning sources.
- 3. Visit flight school here and at nearby airports and explain how to fly friendly from each runway. Request they use the north pattern for training whenever possible, where terrain is not rising, and the area beneath is commercial and industrial. Instruct them to keep their traffic patterns close to the airport which avoid residential areas.

Pilots will comply with reasonable noise abatement requests, but they need to be aware of what they are.

Sincerely,

Bill Tymczyszyn Chairman, Torrance Airport Association Noise Abatement Advisory Committee From: MD Stefansson <

Subject: November 8 - Airport agenda item

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

My name is Michael Stefansson and I live in the hillside "Victoria Knolls" area of South Torrance.

We have lived on Delos Drive for over 20 years and have enjoyed our quiet neighborhood. We expect the occasional aircraft in our area and, in the past, we were rarely bothered by them. Unfortunately, over the past 2 years, the quantity of low-flying airplanes and helicopters over our neighborhood has grown exponentially.

Now, each day is a new adventure filled will rattling windows, deafening engine noise, and regular heart-stopping displays of low-flying planes disregarding the homes on the hillside and the fact that they are 300 to 400 feet above sea level. I don't think I should be able to see a pilot's silhouette when they are banking over my house.

The volume of flights over our area caused us to start tracking the aircraft using on-line applications. The results are startling. Most of the planes are performing and repeating "Touch and Go" flights that include a tight left turn immediately after take-off, followed by a low-level flight over the hillside and a sharp low-level left turn back to the airport. (Still over houses on the hillside.)

Many of the planes are based at the Torrance airport and, we assume most are connected with the flight schools based there. We were surprised, however, by the number of planes using Torrance airport as their playground for landings and take-offs, that ultimately fly back to other airports in Southern California.

Why has our Airport become such a nuisance to the citizens of South Torrance?

Is it: Flight Schools?

Great news student pilots! If everyone shortens their flight path by flying a tight circle over the hillside neighborhoods, you can complete ten "touch and go" landings during a one-hour flight lesson instead of five....Oh, and no one in Torrance will do anything about it! Oh boy!

Is it: No Landing fees?

Hey everyone, everything is free in Torrance?

You can land as many times as you like and it won't cost you a penny! Why would you go anywhere else? Hurray for Torrance!

Is it: No Accountability?

Hey Pilots! There are no rules in Torrance...come have some fun! Nobody will do anything to you if you break a few rules. Maybe, once every blue moon, you will get a "warning"...big deal, right?

Please help us, the citizens of Torrance, to get our serene neighborhood back.

- Set flight pattern guidelines for the pilots and especially flight schools and hold them accountable for noncompliance
- Enforce municipal codes on noise
- Enforce the code "no left turn after take-off until reaching the ocean or 1500 feet altitude..."
- Establish landing fees to discourage "outsiders" misuse of our airport

Thank you for your consideration of this feedback,

Michael Stefansson Torrance Citizen From:

Subject: Public Comment: Noise Abatement Issues and Questions

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Honorable Mayor Chen and Torrance City Council Members,

I support the Riviera Homeowners Association letter and its contents dated October 12, 2022, regarding addressing noise abatement issues at the Torrance Airport Zamperini Field (TOA). And below, I would like to add my voice to additional concerns.

I live in the Torrance Heights neighborhood, which is in District 6, represented by Mr. Griffiths. My husband and I have lived in this neighborhood for 32 years. The noise level from airplanes due to takeoffs and landings from TOA has greatly increased over the years, most likely proportional to the number of flight schools that have also increased.

I believe that noise levels from planes departing from TOA are making an early right turn <u>prior</u> to reaching Hawthorne Blvd. that are part of the issue. The pilots are not following standard rate of turns (3 degrees per second), thus elevating the noise levels over the residential Torrance Heights neighborhoods. In addition, many planes are flying <u>under 1,000</u> feet above our homes. It appears the data from Lab Noise supports most takeoffs are making right turns.

Disruptions:

- Conversations in my house are interrupted.
- Telephone conversations are also impacted.
- TV (over-the-air) volume must be increased.
- Not being able to enjoy sitting in my patio due to the plane noise, disrupting quality of life.
- Plane mufflers are too loud (plane maintenance needs to be enforced).
- Constant droning of planes is unnerving and should be noted by the Airport Noise Monitoring System if flight trackers are placed in correct areas.

Questions

- 1) What recourse can a Torrance resident take when a plane is not being properly maintained i.e., worn out engine exhaust suppressor (aka muffler) and/or is not following FAA flight track regulations?
- 2) What safety measures or policies are in place to ensure the residents' safety from planes flying especially in low altitude should an accident occur? Might it make more sense that air traffic be diverted away from residential areas to more industrial/commercial areas?
- 3) Should there be a review of changing the minimum altitude of a departing plane flying in a residential area, whether making a right or left turn?
- 4) Are the monitors for the Airport Noise Monitoring System placed correctly in areas to collect data for low flying planes, those with loud mufflers, and all other noise and safety violations?
- 5) Aside from the recommendation for installing an updated noise abatement system, what other recommendations/data has the Airport Commission provided recently regarding the increasing airplane noise issues?
- 6) How can we ensure that the negative impacts of airplane noise are appropriately addressed, and that all parties concerned are educated on the regulations/policies/standards/procedures/rules and governing bodies (e.g., FAA, FSDO, Airport Commission, etc.) so we all have a better understanding of the noise abatement process?

Thank you,

Gayle Berry, Torrance Heights 90505

To: Council Meeting Public Comment < CouncilMeetingPublicComment@TorranceCA.gov> **Subject:** Public Comment for 11/8/2022 - Item #9I - Torrance Airport Noise Abatement

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Dear Councilmembers:

I am a homeowner in Southwood Riviera, west of the Torrance Airport, in District 5. I am one of hundreds of residents who are concerned about increased noise and activity from operations at the Airport.

While it is helpful to have the noise monitoring system instituted as of this year, this step should only be the beginning of efforts to curb airport noise and to operate the city's airport responsibly on behalf of residential communities that surround the airport on all sides.

As the City Council's review continues, the following considerations should be addressed further by the City Council:

• Significant Increase in Flight Activity: Based on the monthly report of Airfield Operations at Torrance Airport, through September 2022 there have been 139,015 operations so far this year. Through September of 2021, there were 106,992 operations. This represents a 30% increase in operations just this year. If this trend holds for the remainder of the year, based on 2021's full-year total of 136,652 operations, a 30% increase represents a total of 177,552 operations projected for 2022. This total would far exceed the highest year ever reported in the past 15 years, when there were 153,498 operations in 2008.

The staff report on today's agenda selectively omits the 2022 year-to-date data which is showing a significant increase in flight activity. Instead, the report frames the situation as a declining trend by decade, going back to the 1990s, before most of us started living here. Advocates of the increased flight activity have provided data going back to the 1960s, before nearly all of us lived here. This is an empty comparison with a selective viewpoint, clearly favoring the advocates of increased flight activity and the Airport Commission.

Noise pollution impacts quality of life in the same way as air pollution. Today, we don't ignore strategies that can reduce air pollution just because our air is better than it was in the days of smog alerts from decades ago. In the same way, we shouldn't be ignoring noise pollution because it's somehow better than levels seen decades ago. We should be comparing it to our most recent decade, and the trend is clearly rising.

• More Flight Schools Than Any Other Airport: Currently, there are at least 7 flight schools in operation at Torrance Airport. However, at all surrounding municipal airports, there are no more than 3 flight schools in operation. Why should Torrance have more than double the flight schools of anywhere else? How did this happen?

- Environmental Impacts from Adding Flight Schools: The City did not study the environmental impacts of increasing the number of flight schools and corresponding flight activity.
- Lack of Landing Fees: Currently, Torrance Airport does not assess a landing fee. However, landing fees are charged at other surrounding municipal airports. Additionally, the landing fee in the staff report seems lower than the fee amounts charged at other comparable municipal airports. Please do more due diligence on the fee amount to achieve parity with other airports.
- Questionable Flight Training Activity: There is evidence of planes departing other airports and arriving at Torrance Airport to conduct touch-and-go training. This is happening on a nearly daily basis as supported by flight logs. Why do we let planes come from surrounding airports to do training runs over our homes?
- Lack of Oversight and Enforcement by Airport Noise Hearing Board: The Airport Noise Hearing Board, established pursuant to Torrance Municipal Code 51.7.4, is charged with adjudicating alleged violations of the Torrance Municipal Code related to Airport noise. According to the city's website, the Board has not met since May 2019, which was the only meeting that year. In 2018, there were 5 Board meetings. In 2017, there were 6 Board meetings.

In light of historical activity, it is very doubtful there have been zero eligible enforcement actions in over 3 years of operations since May 2019. Airport advocates view this as a "win" and they are engaging the FAA directly to steer rules in their favor. Why isn't the City being proactive to protect residents and restore these enforcement mechanisms?

• **Noise Monitoring:** The noise monitoring system was recently reinstalled. However, it is not clear whether there are enough noise monitors to adequately capture all area residents who are impacted by noise activity.

Please continue to address each of these items.	Your attention is greatly	appreciated.

Jon Dearing

Best regards,

RE: Torrance City Council Agenda Item 91

Dear Mayor and Members of the Torrance City Council,

There are a few technical issues concerning the current Casper Aircraft Noise Monitoring System that should be assessed and improved. I will now briefly describe these issues below.

- 1) Casper should provide an easily read <u>Tutorial</u> on their NoiseLab Aircraft Tracking website that describes the Casper noise measurement process and how to use their website. The Tutorial should be available as a downloadable PDF document so that the Public can create a copy for quick reference. In addition, the vertical-axis seen on the NoiseLab website noise charts should be labelled with the appropriate descriptive noise level symbols. The Casper Flight-Tracker webpage currently shows the aircraft noise levels in dB(A). Are these readings LAmin, LAeq, LAmax or LApeak? I presume they are LAeq or LAmax noise levels, however which one is it? With this knowledge the Public and the Torrance City Noise Engineers will be able to communicate more clearly since many residents are currently making their own environmental noise measurements for comparison with those made by Casper.
- 2) An <u>additional Casper Noise Monitor</u> should be installed for better noise coverage to the west of Hawthorne Blvd where westbound aircraft are climbing and frequently turning. A good location might be on the Richardson Middle School grounds to **fill-in the gap** west of Casper Noise Monitors TOA-01 and TOA-07. Casper Noise Monitors TOA-01 and TOA-07 located west of Hawthorne Boulevard are approximately 2,300 ft apart. A typical low-wing aircraft climbing at 600 ft altitude can generate a noise intensity level exceeding 80 dB(A) at ground level directly below the aircraft. A westbound aircraft attempting to avoid the noise monitors can fly halfway between Noise Monitors TOA-01 and TOA-07 which will each record a lower maximum noise level of approximately 74 dB(A) due to the slant range of nearly 1,300 ft which is much greater than the 600 ft altitude. However, a resident directly below the aircraft on an unmonitored property will be subjected to a noise intensity level exceeding 80 dB(A).

I am available to discuss these issues Pro Bono with the City Council and/or the Torrance Noise Office. I'm a resident of Torrance and as an Environmental Noise Consultant I have performed hundreds of environmental noise analyses and studies in Torrance and in neighboring cities in the South Bay.

Thank you,

Dave Brent Reliant Environmental Acoustics Torrance, CA From: Jenna Christensen

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

I am hereby registering g my concern related to Torrance airport issues such as noice level and lead fuel endangering the residents of the city. I'm addition, I strongly believe that there is no reason for the city not to charge La f'ing fees like so many other cities do and the hand slapping of pilots who break rules is absolutely wrong. There needs to be financial consequences which are heavy enough for these rule breakers to want to stay within the guidelines. Sincerely,

JENNA CHRISTENSEN

City Council Agenda 11-08-22, Item 9I & Staff Report

Airport Noise and Landing Fees

The issue of landing fees has risen again. The issue was defeated two years ago because it would cause harm to the businesses and users of the airport without generating much revenue. The issue is different this time. The point of the new effort is to reduce airport traffic by causing harm to businesses and users of the airport.

The Torrance Airport Association Noise Abatement Advisory Committee has worked hard over the last year to develop common sense voluntary noise abatement procedures intended to lower the amount of aircraft noise reaching the surrounding community. These measures involve changes to the noise abatement advice to pilots as well as ways to communicate this advice to both based and transient pilots. This includes such things as

- Revised noise abatement procedures, especially advice for the south pattern (there is currently none)
- Point of departure signs at runway ends to advise pilots
- Noise abatement information in the FAA Airport/Facility Directory and online flight planning resources
- Educational efforts directed to flight schools based at Torrance and surrounding airports

While the TAA has been working with local flight schools, the procedures, runway signs, and Airport/Facility Directory are the responsibility of City staff managing the airport. While our Committee has been working with staff for many months, there have been no results to show.

Before we move to Plan B (fees to reduce traffic), we should implement Plan A. I would suggest that we allow revised noise abatement procedures to be implemented before moving on to other more draconian measures.

Before advancing, this matter should be sent to the Airport Commission for consideration.

Thank you for your consideration.

Regarding Agenda Item 9I: City Attorney, Community Development, and General Services – Accept and File Torrance Municipal Airport (Zamperini Field) Noise Abatement and Airport Operations Update and Review...

When does the frequency of flights overhead reach a point that leaves many - if not most - affected residents unhappy? Some answers rely on statistical measurements or legal interpretations. However, based on the conversations I've been having with my neighbors: for the majority of us - without backgrounds in law or statistics - there's simply no escaping the realization over time (especially the last couple of years) that there has been a dramatic increase in air traffic overhead. This pervasive noise regularly wakes you up in the morning... accompanies you throughout your day... and at peak times becomes the kind of constant distraction that you simply cannot put out of your mind and ignore. Whatever the case in the past, here at the end of 2022, it's unusual *not* to be conscious of the maddening drumbeat of airplane engines overhead - not just from time to time, but more often than not, at *all* times. I would hope that our elected representatives on the City Council are able to address this increasingly urgent quality of life issue for my wife, myself... and countless other members of the Torrance community.

Thank you for your consideration,

Michael Lyon

Best

Matt

Sling Pilot Academy

Torrance, CA 90505

www.slingpilotacademy.com

Sling

Nov 8th, 2022

Torrance City Council 3031 Torrance Blvd Torrance, CA 90503

Dear Mayor Chen and Honorable Councilmembers, Copy Torrance Airport

Item 91, Torrance Airport Operations

We have read the Staff Report for Item 9I on the November 8, 2022 Council Meeting Agenda and would like to make the following comments:

Airport Operations

We agree that airport operations have increased in the recent years but are nowhere near the level of operations in previous decades. Current operations are driven by a severe airline pilot shortage. Most of the operations are pilot training – the pilots being trained are the same pilots that will one day fly the jet airplanes that we take to visit friends and relatives.

The Value of Torrance Airport

Relatively few cities across the USA have airports – and they provide incredible value to the community and the city, including:

- During times of emergency, airports are used for medical transport into and out of the area (like Torrance airport on an almost daily basis)
- In the event of a disaster, an airport is an invaluable resource
- Airports bring business and investment and money into a local area they put a City on the map
- Airports create jobs for local residents
- Airports allow for flight training, which is listed by the Federal Government as part of the nation's critical infrastructure

What We are Doing to Reduce our Noise Footprint

Sling Pilot Academy cares about our community. We are residents as well as business operators. We do the following to minimize our impact on the community:

Quietest Airplanes

We have selected with quietest airplanes available for our flight training. Our airplanes never exceed the noise limits imposed by the City. Normally, our airplanes are in the low 60 dBs – which is lower than ambient vehicle traffic noise.

More environmentally-friendly

Our airplanes use Unleaded automobile gasoline instead of Avgas (aviation fuel, which still contains some lead)

Voluntary Noise Abatement Policy

We follow a voluntary noise abatement policy which exceed the requirements of the enforceable City of Torrance policy. This includes prioritizing the North Traffic Pattern, and if using the South Traffic Pattern, climbing to an altitude of 1,100' before reducing power and turning to the South (instead of the standard FAA procedure of turning at 800'). We are working on a Letter of Agreement with the FAA Air Traffic Control Tower that would make our modified procedure standard for our company. We enforce our procedures and have dismissed pilots and flight instructors from our organization for not complying with these procedures where possible.

Noise Testing

We have conducted noise tests to evaluate which procedures result in the lowest impact to the local community. We are constantly improving our procedures to have the least impact. Our most-recent testing concluding that reduced RPM when overflying noise-sensitive areas had the best results, hence our adoption of a procedure that has our pilots levelled off after a climb before overflying noise-sensitive areas.

New Technology

We are exploring engine modifications, such as exhaust after mufflers, to further reduce our noise levels.

. Meeting with the Community

We have met with members of the community on multiple occasions and shown them our operation and efforts to make the least impact on the community. Almost completely, they have become convinced that our airplanes are not the primary aggravators as it pertains to noise. Older airplanes, and transient airplanes from other airports are more-often flying lower and producing more noise over their neighborhoods.

Sling Pilot Academy, while providing flight training (part of our nation's critical infrastructure) to the next generation of airline pilots, will continue to work on ways to reduce our noise footprint.

Our Value to the Community

Sling Pilot Academy (and The Airplane Factory) offer employment and revenue to the City of Torrance and its residents.

- We employ over 55 people, many from the local area.
- We have won awards from the South Bay Workforce Investment Board, and the US Senate, for our training and placement of local apprentices
- We lease 17 rooms in the local area which provide housing for our Students, many from out-of-state.
- We have over 100 fulltime students and over 200 part time students, many of which come from outside of our state
- Our Students patronize local restaurants and businesses, providing income to Torrance businesses
- We pay Taxes to the City of Torrance for sales, purchases, fuel purchases and land leases

Sling Pilot Academy Gives Back

Sling Pilot Academy regularly holds events to give back to the community:

- We donate our airplanes regularly for Young Eagles flights, introducing teenagers to aviation at no charge
- We donate our airplanes to Women in Aviation events several times per year, introducing young women to the world of aviation
- We hold STEM events several times a year for Torrance School Students who come and fly our simulators and learn how to build airplanes in our airplane build facility.

Our Position on Landing Fees

Sling Pilot Academy is against imposing landing fees.

- Landing fees unfairly discriminate against locally-based flight schools, since itinerant air traffic very seldom pay landing fees imposed since there is no recourse if they don't pay.
- Studies have shown that most itinerant air traffic do not pay landing fees.
- The vast majority of Torrance noise-violators are not locally-based aircraft. Therefore, a 'tax' on local business will do little to stop noise violations.
- Landing fees are an additional tax on businesses in the local area already paying taxes to the City of Torrance.
- Landing fees result in very little income for the City, since collection fees consume the vast majority of the fees collected.

The Solution

The solution to airport noise is education of local and itinerant pilots, the development of procedures that mitigate noise for the community, and the education of the community about aviation and flight operations. We believe that with good education of pilots, and sensible practical procedures, we can maintain an acceptable level of noise for the community, while bringing the massive benefits of an airport to a local City.

Best regards,

Matt Liknaitzky, Jean d'Assonville, Wayne Toddun

Dear Torrance City Council Members,

I have lived in Lomita for 48 years. I accept that living next to an airport there will be noise from planes taking off and landing, but this circling for hours from these flight school planes has become unbearable. The constant noise from the one white airplane is so stressful.

I ask that you revoke the leases to these flight schools, stop all touch-and-go flight training and institute a landing fee to alleviate this problem.

I am concerned about the increase of airplanes and noise to Torrance Airport when the Santa Monica Airport closes in 2025.

Thank you for allowing me to voice my opinion.

Sincerely, Vickie DiGioia

Monique Tippie

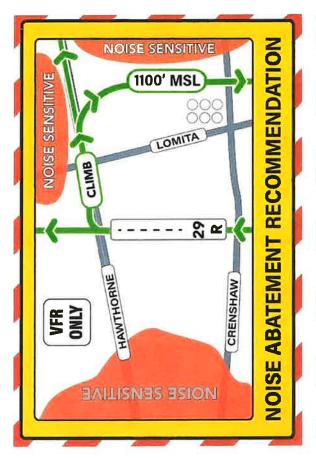

Attachment B

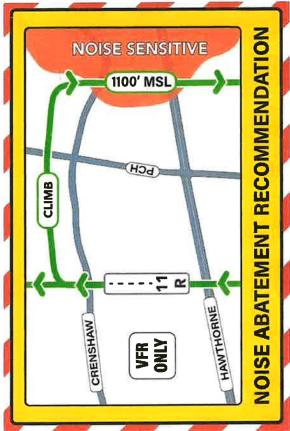

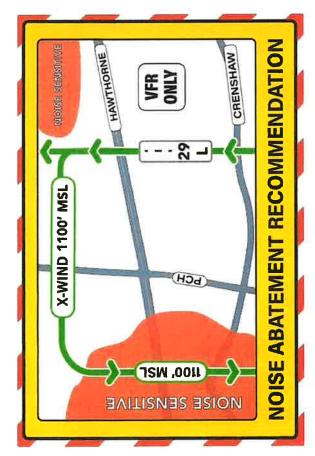

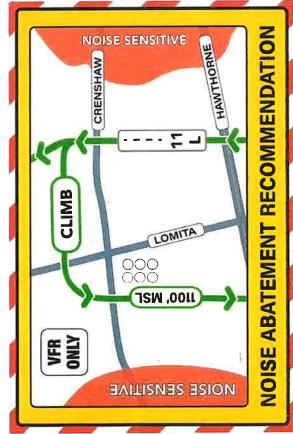

Attachment C

Advisory Circular

Subject: Standards for Airport Sign Systems

Date: 12/23/2020

AC No: 150/5340-18G

Initiated by: AAS-100 Change: 1

Purpose.

This Advisory Circular (AC) change contains the Federal Aviation Administration (FAA) standards for the siting and installation of signs on airport runways and taxiways.

2 Applicability.

The Federal Aviation Administration recommends the standards and guidelines in this AC to establish uniform application of airfield signs for runways, taxiways and aprons. This AC does not constitute a regulation, is not mandatory and is not legally binding in its own right. It will not be relied upon as a separate basis by the FAA for affirmative enforcement action or other administrative penalty. Conformity with this AC is voluntary, and nonconformity will not affect rights and obligations under existing statutes and regulations, except for the projects described in subparagraphs 2, 3 and 4 below:

- 1. The standards and guidelines contained in this AC are practices the FAA recommends to establish an acceptable level of safety, performance and operation for airfield ground navigation.
- 2. This AC provides one, but not the only, acceptable means of meeting the requirements of 14 CFR. part 139, *Certification of Airports*.
- 3. Use of these standards and guidelines is mandatory for projects funded under Federal grant assistance programs, including the Airport Improvement Program (AIP). See Grant Assurance #34.
- 4. This AC is mandatory, as required by regulation, for projects funded by the Passenger Facility Charge program. See PFC Assurance #9.

3 Principal Changes.

This AC change contains the following principal changes:

- 1. Page iii, paragraph 6, Implementation, subparagraph 2 replaced as shown below.
- 2. Paragraph <u>1.5.3.3</u> appended to add four new subparagraphs <u>1.5.4.1</u>, <u>1.5.4.2</u>, <u>1.5.4.3</u>, and <u>1.5.4.4</u>.
- 3. Paragraph 1.14.5 revised to correct reference to intersecting taxiway centerline.

5/10/2019 AC 150/5340-18G

1.11.5 Where vehicle service roads enter or intersect an ILS critical area or a POFZ, an ILS holding position sign L-858R, Size 1, Style 4, (see <u>AC 150/5345-44</u> for additional information about unlighted mandatory instruction signs) should be installed to help vehicle operators maintain their situational awareness when approaching these areas.

- 1.11.6 Aircraft clearance requirements and jet blast may preclude the use of the signs shown in Figure 1-16 on roadways that are located on the apron or other parts of the air operations area.
- 1.11.7 Where possible, signs located on the airfield that are intended solely for vehicle operators should conform to the standards in the Federal Highway Administration (FHWA) publication Manual on Uniform Traffic Control Devices (MUTCD) for Streets and Highways. The manual is available at https://mutcd.fhwa.dot.gov. The sign location, size, and installation criteria may have to be varied from the manual so that they do not conflict with the airfield environment (e.g., wing tip clearances). See Figure 1-17, Figure 1-18, and Figure 1-19 for vehicle roadway sign dimensions.

1.12 Information Signs.

Information signs are signs that are installed on the airside of an airport, other than mandatory instruction signs, taxiway guidance signs (as described in this chapter) and runway distance remaining signs (described in Chapter 2, paragraph 2.2). An information sign has a black inscription on a yellow background, and provides adequate clearance to aircraft. Examples of information signs are: noise abatement procedures, crossing vehicle roadways, or other specialized information. These signs need not be lighted, and the size and message of the inscription is at the discretion of the airport operator; however, they should be retro-reflective and mounted on frangible couplings per paragraph 1.17). In addition, care should be taken to ensure that information signs do not take on the appearance of a taxiway direction or destination sign.

1.12.1 VOR Receiver Checkpoint Sign.

This sign has an overall mounting height of not less than 24 inches (61 cm) and not more than 30 inches (76.2 cm). It is located as nearly as practicable on an extension of the VOR Receiver Checkpoint Marking diameter line and faced perpendicularly to the line-of-sight of the viewer in the circle (see Figure 1-20).

- 1.12.1.1 The inscription on the sign shows the facility identification, channel, radial selected (published) for the check, and the plotted distance from the antenna (when applicable).
- 1.12.1.2 The station identification and course numerals are at least 7 inches (17.8 cm) high and the other letters and numerals at least 3 inches (7.6 cm) high.
- 1.12.1.3 The sign is installed in accordance with the height and distance standards in <u>Table 1-1</u>. An example of this sign is shown in <u>Figure 1-20</u>. (See <u>AC 150/5340-1</u>, *Standards for Airport Markings*, paragraph 37, for more details about the VOR Receiver Checkpoint Markings.)

The separation between individual sign housings meets the requirements in <u>AC</u> 150/5345-44.

1.14 Sign Size and Location.

Signs are to be manufactured and installed in accordance with the current version of \underline{AC} 150/5345-44.

1.14.1 Sign Size.

Three sizes (heights) of signs are available (see <u>Table 1-1</u>).

1.14.2 Choosing a Sign Size.

When selecting a sign size, take into account factors such as effectiveness, aircraft clearance, jet blast, and snow removal operations. Normally, the larger the sign and the closer it is located to the runway or taxiway edge, the more effective it is. However, aircraft clearance requirements and jet blast effects require smaller signs when located near the pavement edges, while effectiveness requires larger signs when located at further distances. Also, the effects of snow removal operations on the signs should be considered in the choice of sign size and location.

1.14.3 Sign Clearances.

Provide a minimum 12 inches (30 cm) of clearance between the top of the sign and any part of the most critical aircraft using, or expected to use, the airport when the aircraft's wheels are at the defined pavement edge. All signs in an array, e.g., a runway/taxiway holding position sign array consisting of a runway holding position sign and a taxiway location sign, are the same size and same height.

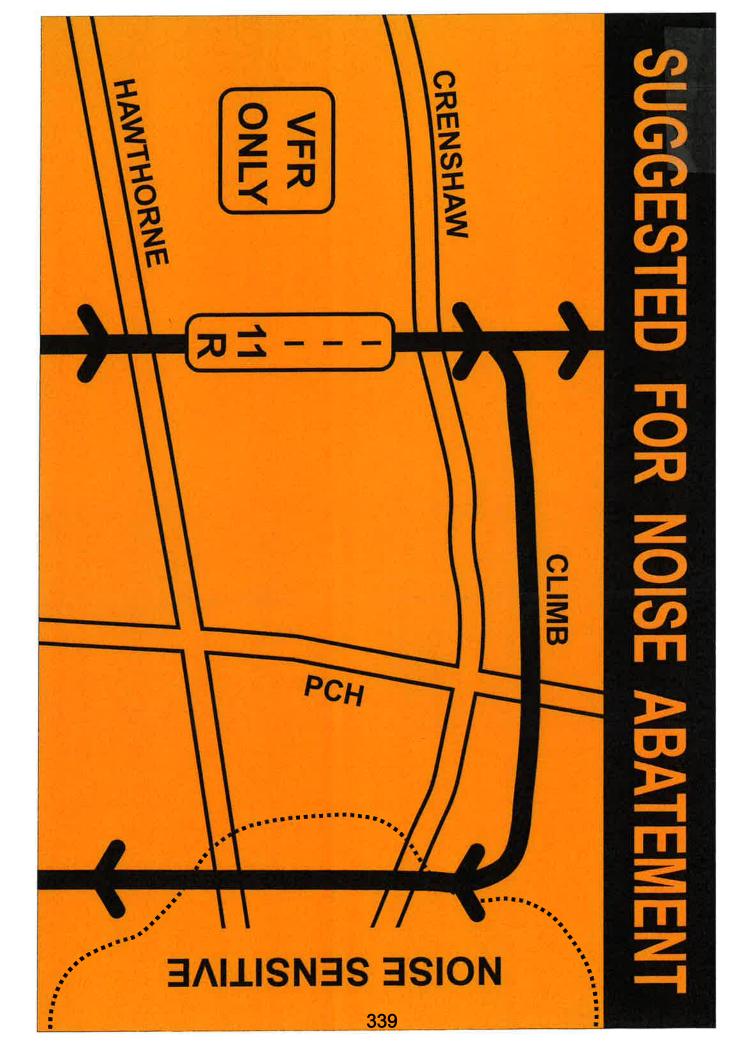

63.4

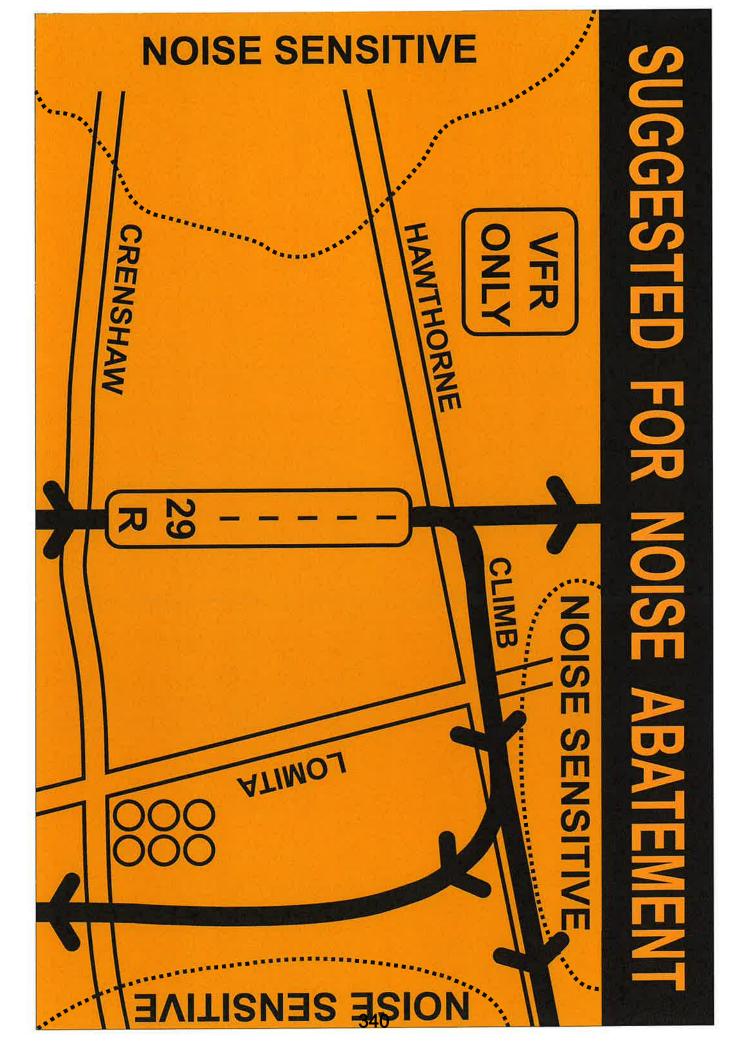

1.14.4 Runway Holding Position Sign Locations.

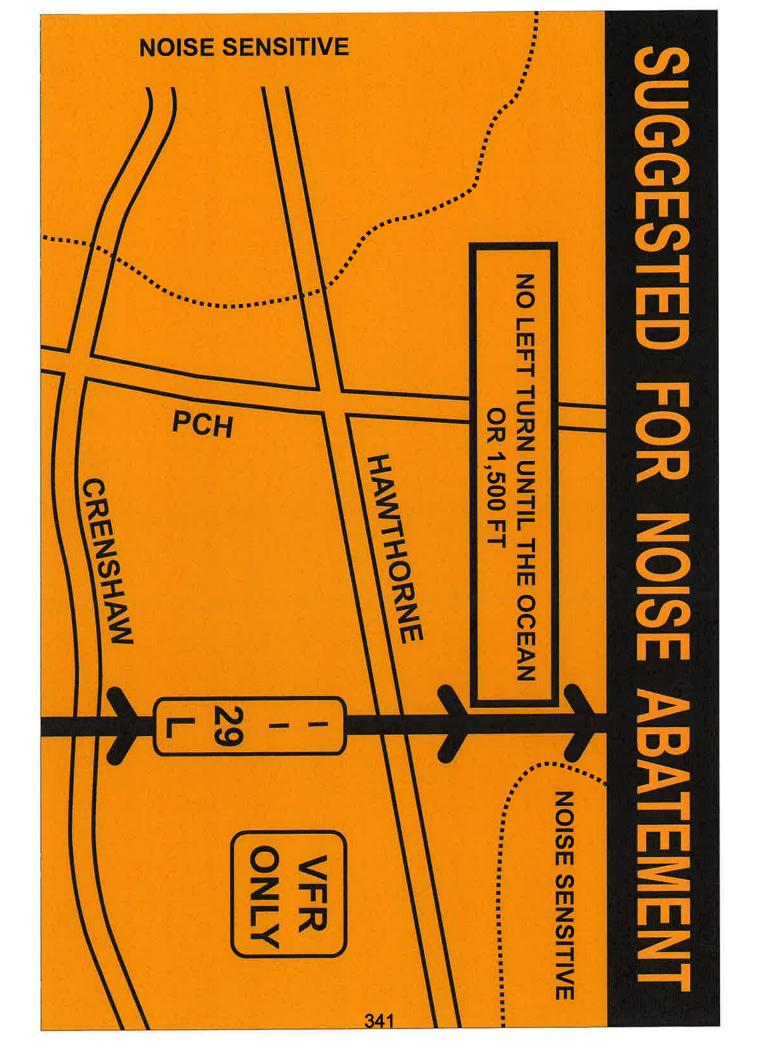

The distances shown in AC 150/5300-13A, paragraph 315a, Runway Holding Position (hold line), and Table 3-5, are used in determining the location of runway holding position signs. Holding position signs are located in-line with the holding position markings; a tolerance of up to 10 feet (3m) farther away from runway centerline than the holding position marking is allowed. Also, use <u>Table 1-1</u> below to determine the distance of runway signs from the pavement edge.

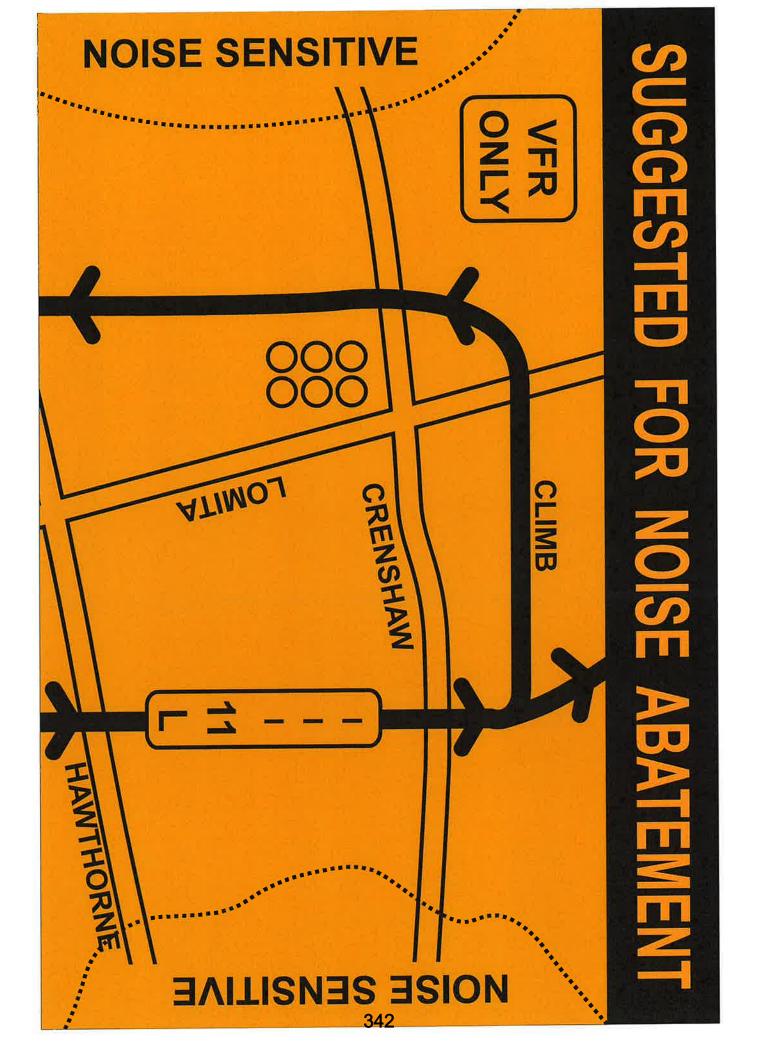

1.14.5 Taxiway Sign Locations.

The distances used in determining the sign locations at intersecting taxiways are shown in Table 4-1, Item "Taxiway Centerline to Fixed or Movable Object," of AC 150/5300-13A. Use the values for the largest airplane design group serving the airport. For signs installed at holding positions, the signs are in-line with the holding position markings; a tolerance of up to 10 feet (3 m) farther away from the intersecting taxiway centerline is acceptable. Where there is no operational need for taxiway holding position markings (at taxiway/taxiway intersections), the signs may be installed in the area from the taxiway point of tangency to the location where holding position markings would be installed (see AC 150/5300-13 for additional marking location information). However,

To the Torrance airport commission,

The flight schools are becoming more and more aggressive. November 19 was the worst yet. The drone of flight schools was constant for the last 31/2 hours. Monday through Saturday non-holidays my neighborhood sees an aircraft an average of every 100 seconds. That 100 seconds is an average. Sometimes it's 3 a minute and sometimes it's silent for all of 5 minutes. Not tonight.

Think about this, if my sisters, nieces and nephews visit we can not sit outdoors. Conversation is impossible. That's unconscionable.

This keeps going through my mind. Why is this OK? Why is it OK for flight schools to terrorize all the neighborhoods surrounding the airport of both Torrance and Lomita? Thousands remain indoors so that a dozen can learn to fly. I ask again, why is this OK?

Another thought is the droning we constantly hear is the sound of our property values tanking. I'm not sure a home could be sold in this environment. When the values fall in these neighborhoods they fall in the surrounding neighborhoods also .

Again, why is this OK? How is this OK? What can be done to make this neighborhood what it was only a few months ago? Why did things change? It was sudden and now it's constant.

The flight schools DO NOT CARE about the ruination of the neighborhoods we all had just a short time ago. THEY DON'T CARE. The flight schools want only money and the students only want their pilot license. They work here or learn here. They DON'T LIVE here. THEY DON'T CARE!!

I heard a man at the November 8th Torrance city council meeting say that the noise we all now hear is like December 7th at Pearl harbor. I will not denigrate the heroes that actually lived through that, but I concur on his meaning. To paraphrase FDR, whoever and whenever this was approved is a day that should live in infamy.

Why is this OK? How is this OK? How long will we have to listen to this so that a dozen can learn to fly? What can be done to end this?

I would invite you to sit on my porch for an hour Monday through Saturday non holiday after 10:00 am to see and hear what all my neighbors see and hear 10 hours a day just so a dozen can learn to fly. Only so a dozen can learn to fly.

Best regards,

Randy

Randy Cilva

Good afternoon,

I'm sitting in my kitchen and all I hear is plane after plane. It's loud and very annoying. Please make a decision to stop these flight schools, it's not worth so many of us being stressed out with this constant noise.

I've live in our home for 20+ years and worked at South End Racquet and Heath club in the late 80's and it was never like this. It's nice Torrance has a small airport for residents to fly their planes as my husbands father did for many years. BUT these planes over our heads every few minute is just too much.

Please please do something quickly.

Cindy Ramage

Subject: Aircraft Noise Complaint - November 28, 2022

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

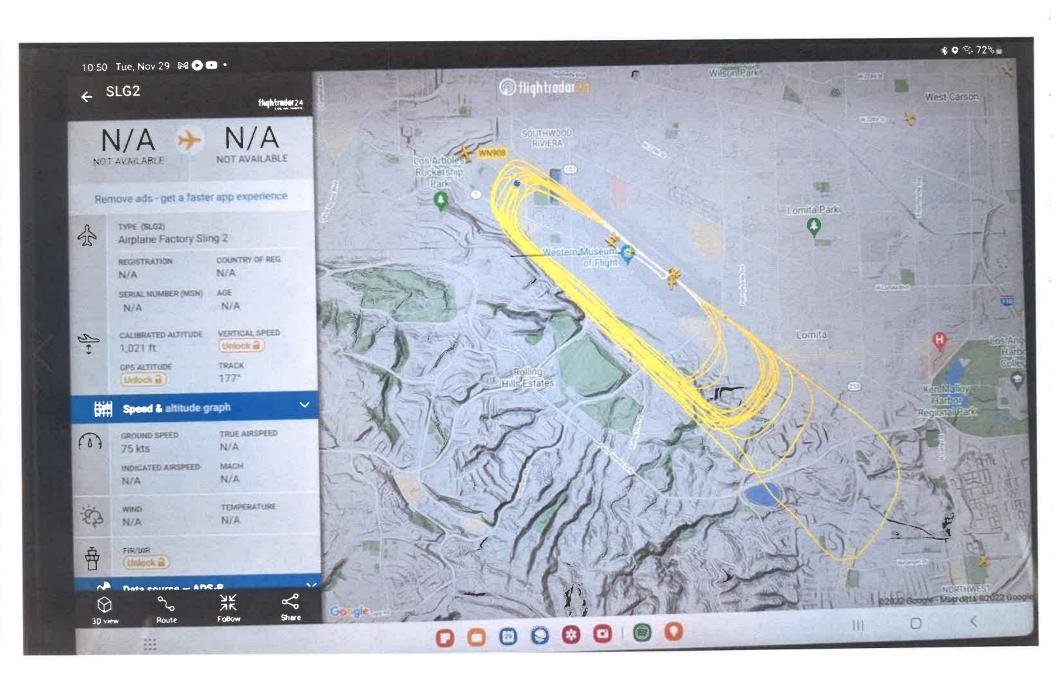

On Monday, November 28, I tracked this one aircraft that was obviously doing touch and go's at TOA. You can see from the screen shot below that one plane was generating too much noise pollution and air pollution. And it was turning right over my neighborhood (also making multiple illegal left turns). And this was just one plane. There are several more that do the same thing for 10 hours a day. I cannot carry on a conversation with my husband inside my house with all the doors and windows closed much less enjoy my outdoor patio.

This is unacceptable!

We have peacefully coexisted with the Torrance Airport for 27 years. Now I cannot even consider selling my home and moving away from this cacophony, health hazard and menace. My property is very quickly being devalued because of the onslaught from the flight schools.

Ground TOA Flight Schools!

FW: Torrance Airport No Left Turn Law

From: Sue LaVaccare <

Sent: Thursday, December 1, 2022 12:01 PM

To: CityCouncil <CityCouncil@torranceca.gov>; Council Meeting Public Comment

<CouncilMeetingPublicComment@TorranceCA.gov>

Subject: Torrance Airport No Left Turn Law

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Dear Members of the Torrance City Council,

Thank you for taking up the issue of the No Left Turn Law (Torrance Municipal Code Section 51.2.3.e) during the November, 2022 Torrance City Council meeting. It is a good step in the right direction that the staff will resume enforcing the City's no-left-turn law (TMC 51.2.3e), effective today, December 1, 2022. The CDD Director, Michelle Ramirez, said that the City would enforce the rule only for departing, non-training planes, and not enforce the No Left Turn Law for training operations.

Please direct staff to include training operations in the enforcement of the No Left Turn Law starting today, December 1, 2022. This includes the City asking the FAA control tower to not approve pilot requests to train in the south pattern.

The Torrance Municipal Code has no language that supports staff's position of now choosing to only enforce the No Left Turn Law for Non Training flights. Section 51.2.3e uses the term "aircraft." It is clear and unambiguous. It makes no distinction for an aircraft that is training. It states nothing about where the aircraft is going or what it is doing.

The only definition of "take off" is in Section 46.8.3 which states "take-off shall mean the flight of an aircraft departing Torrance Airport from the time it commences on its departure on the runway."

Section 51.5.1 states "a touch and go operation shall mean an action by an aircraft consisting of a landing and departure on a runway without stopping or exiting the runway."

As shown at the bottom of a former noise abatement pamphlet published by the City (shown below), the City has interpreted Section 51.2.3e to apply to training in the past and the Code has not changed. Under the heading TRAINING, "When taking off to the west, no turn allowed prior to shore or 1,500' altitude." Clearly, the law applies to aircraft doing training as well as departures.

Training operations are the majority of flights at Torrance Airport and the primary cause of problems in our neighborhoods. *Unless the no-left-turn law is enforced for training flights, it will not mitigate the main problem.*

I ask that you instruct the City Staff and all pilots to obey the No Left Turn Law for EVERY SINGLE FLIGHT.

Pilot school training flights bring great risk, since regular people with no experience operating an airplane are piloting the planes. Sadly, the Torrance community experienced another tragedy just yesterday at Torrance Airport when a plane crashed and both people on board died in the crash. It is reported that it was a training flight. The plane flew 4 loops in the same route before crashing. If that training flight was illegally flying over the highly dense hillside residential area and crashed, imagine the greater level of tragedy the Torrance

community would have experienced. How many school students, elderly people & working families would have been killed or injured? It is just a matter of time that this will happen if the City does not enforce the No Left Turn Law (Torrance Municipal Code Section 51.2.3.e) for ALL flights. This law has been in the Torrance Municipal Code for over 60 years.

As you know, there was also a Torrance Airport training flight that crashed into a nearby warehouse in 2019 and killed the person on board. The FAA investigation verified that a regular person who was taking flight lessons was piloting that plane. There is a No Left Turn Law in Torrance for a good reason and has been enforced for over 60 years. Why stop enforcing it now?

The number of flight training schools using the airport is growing. Every time an aircraft does a "touch and go" to the west from the left runway (29L), it turns left under 1500 feet and violates the City's ordinance. There are thousands of violations annually. In fact, there are many more "early left turns" than any other type of airport noise violation. The noise impact on residents is significant, especially on the southwest side of the airport consisting of noise sensitive residential areas, including Region 3, the most noise sensitive of the City's four Noise Regions outlined in Torrance Municipal Code Section 46.7.2.

In addition, there are proven air pollution & lead poisoning negative health impacts of airplane flights, which are VERY serious issues facing our community because of the lack of enforcement of the No Early Left Turn Law.

If you are standing in the airport and just look to the south where the left turns take place, you can see an elevated hillside densely populated with homes and schools. If you look north, you see flat land (lower elevation) and warehouses and businesses.

Finally, the city staff does not follow Section 51.7.3 of the Code, which provides for an automatic ban of any "aircraft" with three or more noise violations. This Section states it is separate and apart from any Hearing Board process for the "operator" of the aircraft. Please direct staff to resume following this Code provision and enforcing Section 51.7.3 of the Code.

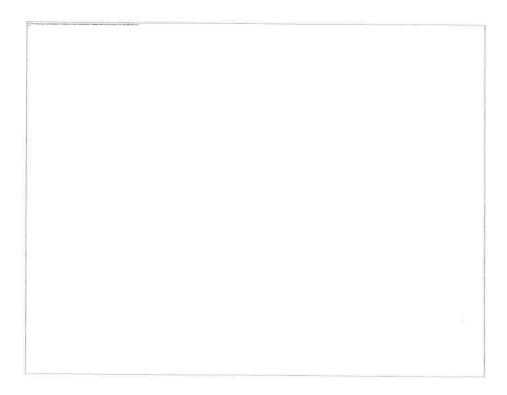

Why do the elected representatives and city staff want to put the lives of hard working residents and school children at risk? What is the benefit to you and the city to allow a few pilots and training schools (for profit businesses) to consistently break the No Left Turn Law? It causes daily negative impacts on the safety, health and well-being of thousands of residents and students.

Unless the City resumes FULL enforcement, the problem is going to get worse. The City should not have stopped the enforcement of a 60+ year old law. This issue has languished far too long. Please resume the full enforcement of the City's No early left turn law now.

Thank you for representing the best interest of the residence, homeowners and students of Torrance by fully enforcing this law.

NOISE ABATEMENT PAMPHLET

PUBLISHED BY TORRANCE NOISE ABATEMENT OFFICE (IN EFFECT AS OF SEPTEMBER 1, 2017)

Subject: UPCOMING MEETING OF TRANSPORTATION COMMITTEE ON AIRPORT IMPACTS

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

Honorable Members of the Transportation Committee:

Soon, the Transportation Committee will be considering airport environmental impacts. This issue has been before the Council several times, but there is still a lack of transparency and basic information needed to make the best decisions. For example, it would be helpful to have answers to the following questions.

- 1) How many noise violations are there? At the November 8 Council meeting, staff stated there were 5 noise violations since the new Casper system began operating on August 15. Pilots claim noise violations average only 2 per week. But Casper's Flight History shows there were 153 noise violations (see the attached list) in the first 15 weeks, or an average of over 10 per week. Moreover, this number does not include violations of the City's SENEL noise limit since those numbers have not been made public. What is the correct total number of all noise violations, including SENEL violations? Also, how many violations have been detected on each monitor? This information is needed to evaluate the effectiveness of monitor locations.
- 2) Why doesn't staff follow Municipal Code Section 51.7.3 EXCLUSION OF VIOLATION-PRONE AIRCRAFT? This provision requires staff to ban an aircraft after the third noise violation. However, Casper data shows one plane (N260EA) has committed at least 14 violations as of November 30 and Flight Tracker shows it may have committed as many as 25 violations. Yet it hasn't been banned. In the past, staff sent aircraft with multiple violations to a Hearing Board, but that is not the proper procedure. That Section of the Code is clearly intended determine the guilt or innocence of a "person" not an "aircraft." Section 51.7.3 is the process for handling "aircraft" violations. Why isn't it being followed? I've asked the staff this question but could not get an answer.
- 3) How many early-left-turns are there? How many are departures and how many are for training? Casper's system tracks early-left-turns and reports them to staff, but the information is not made available to the public. Historically, the City considered all aircraft taking-off to the west and turning left under 1500 feet (before reaching the ocean) to be violations. Now, staff says only departures that leave the area are violations, not training. What is the magnitude of this problem? How many early-left-turns are being done while training in the south pattern? Also, the Code does not make any distinction between departures and training. Both are take-offs to the west. When, how, and on what basis did staff change City policy? Was any notice of the change given to the public?
- 4) Does the City follow the California Environmental Quality Act (CEQA) when granting permits to flight training schools? CEQA requires the City to consider environmental impacts before approving leases and permits. Did the City follow the required process? When were the permits approved? Who approved them? Were environmental findings made? Was the process documented? If the CEQA process was not followed, why not? Also, when do the current leases and permits expire? What is the process for renewal? Does the City have a legal right to deny a permit to a flight training school based on negative environmental impacts?

5) How many complaints has the City received in total? How many from each source, including NoiseLab, email, telephone, and Airnoise? At the November 8 meeting of the Council staff stated the City had received 782 complaints on NoiseLab. But they did not state the number of complaints from the other sources. Airnoise publishes data on its website and it currently shows it handled over 4500 complaints to the airport in the past 30 days. What is the total number of complaints received by the City from all sources? Also, the NoiseLab website now states that City staff will not process complaints filed through Airnoise. Why are those complaints being excluded?

I hope you will ask staff to provide your Committee and the public with answers to these questions in connection with your upcoming meeting.

Respectfully, Richard Root Resident, Hollywood Riviera Chair, LA Area Helicopter Noise Coalition

SUMMARY: 153 TOTAL VIOLATIONS IN 15 WEEKS AVG VIOLATIONS PER WEEK 10.2

Comments:

- 1. Numbers do not include violations of City's SENEL noise limit.
- 2. Numbers do not include violations not detected by monitors (which are spaced ½ mile apart). Placing monitors in the gaps between monitors on the east and west sides of the airport would significantly increase the number of violations detected by monitors.
- 3. N260EA has at least 14 violations as of 11/30. Why hasn't this plane been banned after the third violation under TMC 51.7.3 EXCLUSION OF VIOLATION-PRONE AIRCRAFT?

Subject: Flight School Constant Noise - 12/5/22

WARNING: External e-mail

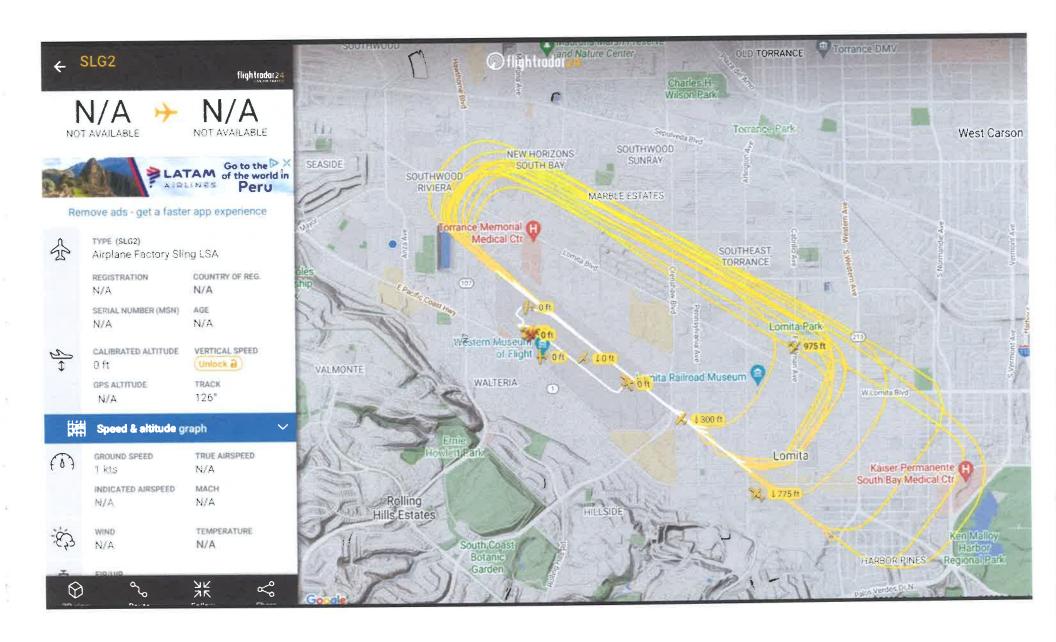

Please verify sender before opening attachments or clicking on links.

This morning I tracked one plane that did 12 "donuts' over my neighborhood as well as adjacent neighborhoods. This plane was never over 1,000 feet in altitude and I can only guess how much air pollution was spewed from this one aircraft along with the constant drone of the engine. This is one of dozens of student pilot flights that are polluting our homes and destroying our quality of life. This is not a one in a while occurance. It happens every single day for 10 hours a day. These flights schools must be closed!

What is going to take to reverse the decision made by the City Council to allow too many flight schools at TOA? Another crash while a pilot is doing touch and gos? A crash into a home with people inside? A crash into one of the many Torrance parks? A crash into a school?

Ground TOA Flight Schools!

Mary Cilva

Ms Poirier

Is it possible for this information to be included with the agenda for the subject meeting?

Jim Gates

Noise Reduction at Torrance Airport

Noise from airport operations cannot be eliminated, but it can be minimized

11/8/2022 Peter Broen, TAA President Jim Gates, TAA Past President

TAA briefed the following

11/8/2022 to 11/11/2022

- Mayor Chen
- City Council Members (Kaji, Lewis, Sheikh, Kalani, Griffiths)
- City Manager's Office (Chaparyan, Santana, Huizar)
- Council Member Matucci did not respond to our invitation

Background

- Until recently, training pattern work has mainly taken place on the north runway.
- More recently, a substantial increase in training resulted in a north training pattern that has often become saturated and controllers have had to send aircraft to the south pattern.
- The recent uproar concerning increasing traffic in the south pattern is not about excessively noisy airplanes. The complaint is about frequency of the noise; the amount of traffic.
- Many neighbors have a basic misunderstanding about how airports work

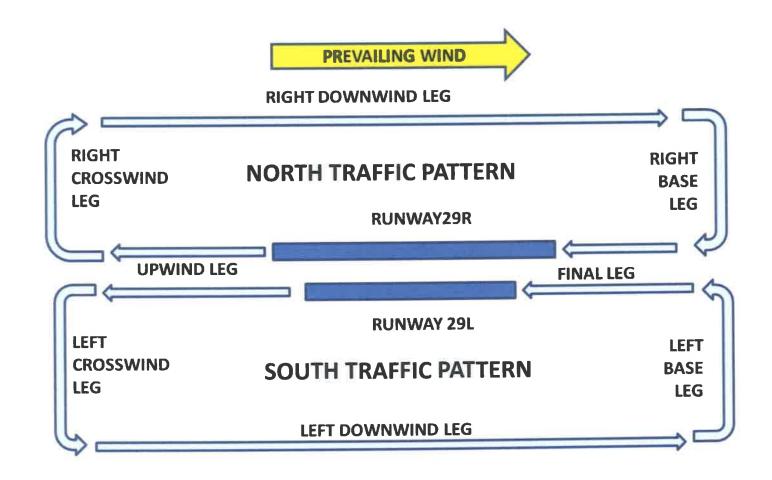

Our Messages

- Successful noise reduction requires voluntary pilot participation
- Aviation community is leading noise reduction efforts at the airport
- TAA supports noise reduction
- Torrance pilots are not the "bad guys"
- The City needs to take an active role in disseminating correct information about the airport to the community

Terminology

TORRANCE AIRPORT TRAFFIC PATTERN

Quiet Procedures for 29L (VFR Only)

- After takeoff, climb at maximum safe rate
- Reduce RPM crossing Hawthorne*
- Climb to pattern altitude and reduce
 RPM prior to turning to cross wind leg*
- Use minimum RPM in down wind leg*
 - * Lower power aircraft may be unable to do this safely, but they are much quieter

The Guidelines

- Flight safety is paramount
- Torrance has valid community noise limits
- Flight paths, altitudes and operational procedures cannot be mandated by City
- Pilots MUST obey the Federal Aviation Regulations (FARs).
- Pilots' voluntary use of quiet procedures is key to success

Our Efforts—Flight Schools

Sling Pilot Academy

- Selected modern <u>quiet</u> trainer: Sling NGT
- Their Rotax engines use unleaded auto fuel
- Academy teaches quiet techniques; mandates their use
- Use north pattern for landing practice whenever possible
- Performed flight test: higher pattern & lower
 RPM (64-68 dbA for quiet procedures)
- Looking for continuous improvement (flight testing; airframe & engine modifications, operational processes, etc)
- Participates in pilot survey

Our Efforts—Flight Schools

South Bay Flight School

- Teaches quiet procedures
- Does not permit use of south pattern
- Participates in pilot survey

Individual flight instructors

- Some participate in pilot survey
- More outreach is needed—
 communication is more difficult

Our Efforts—Robinson Helicopter Company

- Negotiated quiet routes for approaching & leaving TOA
- Requires owners to follow these routes when transiting to/from TOA for periodic training
- Make only direct arrivals and departures to south runway
- All landing practice is at north helipad and uses north helicopter pattern

Our Efforts--TAA

- Redesigned attention-getting runway signs to better relay quiet procedures to transient pilots (awaiting staff approval & installation)
- Recommended changes to noise abatement brochure to better communicate to pilots (awaiting staff approval & distribution)
- Recommended changes to "no left turn" letter to remove dangerous wording, elicit voluntary compliance & conform to Federal Laws (awaiting staff approval & use)

(More)

Our Efforts—TAA

- Performed noise flight testing with Sling NGT, Cessna & Decathlon
- Briefed Airport Commission & community on our noise reduction efforts (9/9/2022)
- Surveyed Torrance pilots on quiet procedures (September 2022)
- Regularly analyze complaints and violations; provide report to Airport Commission & public (quarterly)
- Regularly reach out to pilot community and airport neighbors with e-mails & web-based information (www.torranceairport.org/facts/)

Our Efforts—Individual Pilots

- Pilot survey results (September 2022):
 - Surveyed over 600 Torrance pilots
 - Only 43% have used the south pattern in the past 30 days; of those that do:
 - 80% use maximum safe climb rate after takeoff
 - Over 60% climb on runway heading and reduce RPM prior to making cross wind turn*
 - 64% use minimum safe power on down wind*
 - * Lower power aircraft may be unable, but produce much less noise
- About 25% of the pilots using the airport are not based here (Long Beach, Fullerton, Hawthorne, Santa Monica. . . .)
- TAA can assist in outreach about quiet procedures

Petition

- "Therefore, the undersigned residents of Torrance and adjacent cities, petition the Mayor and City Council to:
- Hire outside counsel with expertise in aviation law to identify and evaluate options that
 may still be available to reduce the airport's environmental impacts (e.g., charge
 landing fees, close south runway, resume enforcing early-left-turn law, prohibit sale of
 leaded fuel, etc.) and to defend the City against any legal challenges;
- Pay the City's legal expenses from the City's Airport Fund, not from general taxpayers;
- Hold public hearings to discuss and consider all legally available options."

This is a clear indication that:

- the City needs to support current efforts by TAA, flight schools and pilots to minimize noise from airport operations;
- •the City needs to provide the community with a clear picture of the laws that regulate aviation in the U. S. and at Torrance Airport; and
- the city needs to emphasize & enforce real estate disclosure requirements

375

What Do We Need?

City staff:

- Approve, manufacture, and install recommended runway signs
- Relay to the public:
 - Efforts by pilots, flight schools, Robinson and TAA to reduce noise
 - Legal limitations on City authority
 - The reality of airport operations (altitudes, traffic patterns)
- Enforce real estate disclosure requirements

Noise Abatement:

- Rewrite, publish, and make available new brochure material
- Correct "no left turn" letter & website
- Provide information about airport traffic patterns and the affected areas on website

City Council:

 End public confusion about applicable laws by repealing invalid and unenforceable TMC sections: 51.2.2, 51.2.3 and 51.2.19

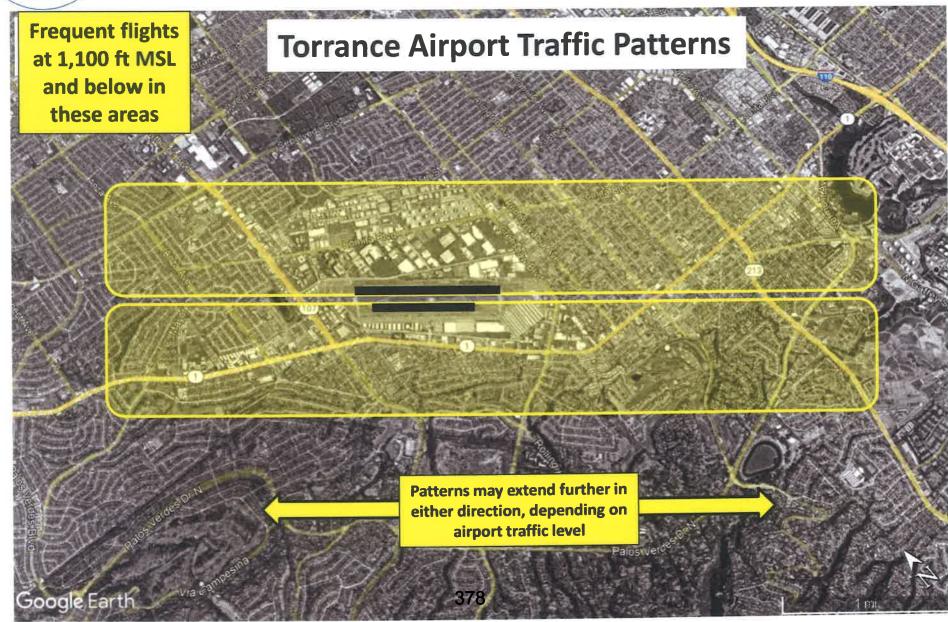

The aviation community is a very knowledgeable resource—USE US.

QUESTIONS?

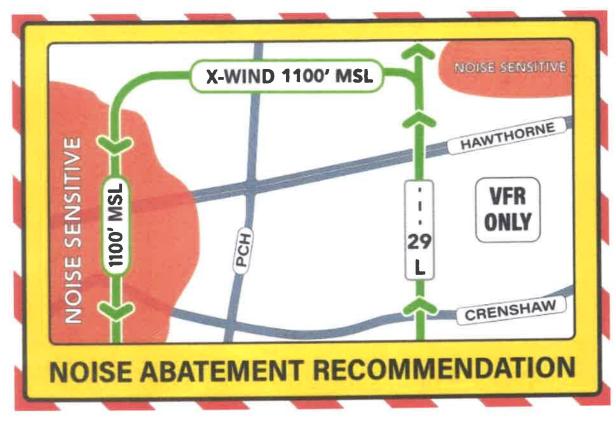

Suggested graphic for City websites

Example of Recommended Runway Signs

These colorful signs are designed to get the pilots' attention. They are awaiting approval and installation by City staff.

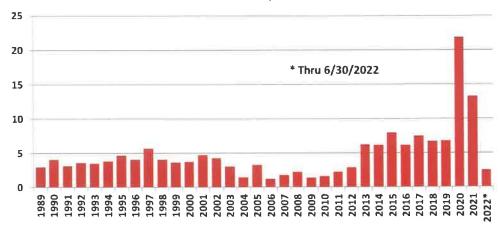

Torrance Airport Complaint History

(From Torrance Noise Abatement database)

Complaint Rate History

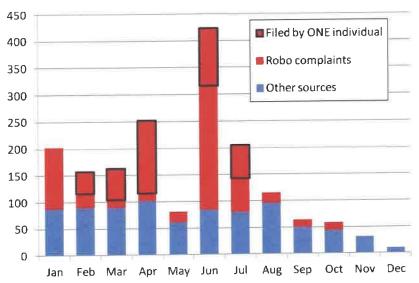

Per thousand operations

Computerized complaint-filing programs permit one individual to distort reported complaint data. Here, one single individual made over half of the complaints in April 2021. That person may have been responsible for most, if not all, of the "robo-complaints" shown here in red.

The complaint rate (per thousand operations) more than doubled in 2020 as the City was considering continuation of the expensive monitoring contract (\$1,000 per day). During the 9 months prior to shutting down that system, violations averaged only 2 per week.

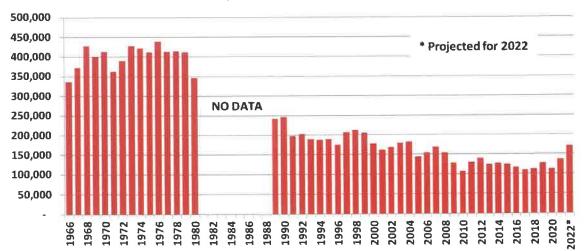

2021 COMPLAINTS

Torrance Airport Operations History (From FAA database)

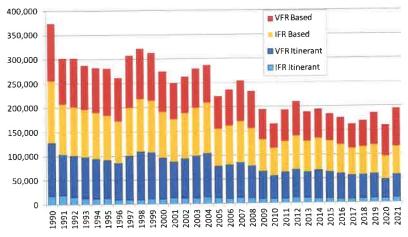

Operations History

Even with the recent increase responding to the current world-wide pilot shortage, the operations level (200,000) is at about half the historical maximum (over 400,000)

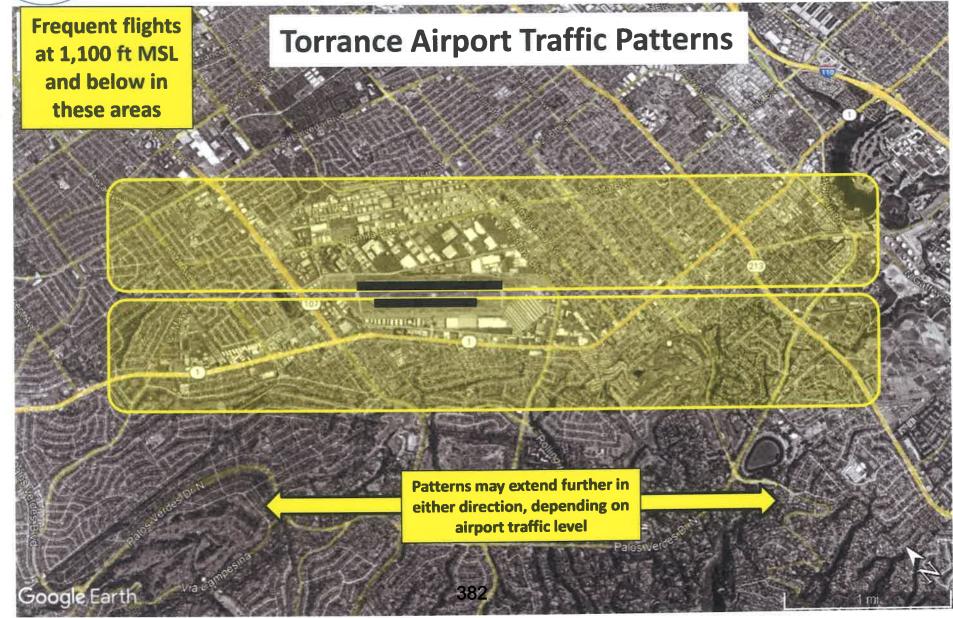

Historically, about one-third of operations are made by aircraft not based at our airport. As a regional transportation facility, the level of operations is determined by the demand for transportation and training.

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

I was fortunate to have been in attendance (via video till 3:00AM) at your last council meeting. I was so excited and relieved to hear that you were all not just aware of the issue itself but of the seriousness of the problem. For those of us under the flight path, it is literally UNBEARABLE!

In fact, as I write this note, the planes have not stopped their repetitive, low altitude, T&G flights right over my house, often less than one minute apart and also often less than 300' or 400' up. How do we live with this?

I write in strong support of you, the City Council taking any and all action required to stop this outrageous assault on our right to peace and quiet in our HOMES. This was never an issue or a problem until someone (?) decided to let these pilot training schools come in and take over! It is horrible!

HELP...PLEASE1

Dear Torrance City Council members,

Yes, I'm writing again in support of you, the City Council, taking drastic action to STOP the invasion of training flights out of Torrance Airport.

I'm doing this again because again today, like yesterday...and every day except Sundays...they started at 8:00AM and don't stop until the sun goes all the way down.

They are destroying our neighborhoods.

Thank you.

Good Evening Kathleen ~

I hope all is well with you. Thank you for forwarding the attached letter. Just for your information, a City Council subcommittee meeting has been scheduled for December 14, 2022, at 5:30 pm, in the City Council Chambers to discuss the increase in flights and potential solutions (e.g. reduction of training flights for based and transient flight schools, limiting the use of the south runway and amending the TMC to change flight-training hours). All of the signatory's in the attached letter are aware of this meeting and have been invited to attend. Should you have any questions, please feel free to contact me.

Please verify sender before opening attachments or clicking on links.

Hi Michelle,

I hope you are well. Congresswoman Waters received the attached letter from the Riviera Homeowners Association. It seems to express the types of concerns you explained to us last summer, namely that the City of Torrance is not enforcing its regulations restricting flight paths over densely populated residential neighborhoods. You may want to share the 8/9/22 FAA response letter with this association.

Please let us know if you want to discuss other possible actions that our office could take to support the City of Torrance with this issue. Thank you.

Kathleen Sengstock (she/her) Senior Legislative Assistant Rep. Maxine Waters Kathleen.sengstock@mail.house.gov

REC'D NOV 2 2 2022

CC: Como/fc

November 14, 2022

To: Congresswoman Maxine Waters, 43rd District

From: Judy Brunetti, Torrance Airport Noise Coalition member

Re: Conversations with Congressman Ted Lieu's staff

Good afternoon, Congresswoman,

We are a group of residents who are members of the Riviera Homeowners Association and an on-line group called Reform TOA. Together, we are the Torrance Airport Noise Coalition. Our goal is and has been to have the City of Torrance minimize the impact of noise, lead pollution and frequency of training flights coming out of Torrance Airport (Zamperini Field/TOA).

Recently we met online with Congressman Lieu's staff regarding the fact that on Nov. 8, an independent aviation law firm declared that the flight path laws in the City's Municipal Code were enforceable. This was great news for residents because the big problem now is that training flights have been allowed starting this year to turn left (south). The south-turning training flights circle over and over a densely populated residential area with a 400' hill in the middle.

The law firm's declaration means that the city can deny these training flights from flying over our homes and instead, must turn right and fly over an industrial area (which has been the convention for over 40 years). The FAA has no jurisdiction in this matter.

Our problem is that the city is choosing **not** to enforce the Municipal Code and is allowing these flights to continue. The issue has been sent to committee and should come back to a public hearing soon.

We are currently trying to inspire the City Council to enforce the City's own codes. We wanted to keep you in the loop, as a courtesy. We hope to hear back from Congressman Lieu soon. If you have any advice for us, we would also greatly appreciate hearing back from you.

Personally, I am sorry you will not be our Representative after the districting changes. Best wishes in your new area.

Sincerely,
Judy Brunetti, co-president, Riviera Homeowners Association
Richard Root, Torrance Airport Coalition Chairman

Natalie Brescher, CPM
Elizabeth Spatz, archivist and RHA board member

PS: The Torrance airport is in your district, but the residential area to the south is not.

Subject: Airport Noise - Up for Discussion

WARNING: External e-mail

Please verify sender before opening attachments or clicking on links.

To the members of the Torrance City Council,

My name is Garrett Reisman. As a Riviera homeowner and an aircraft owner based at Torrance Airport, I think that I am in a unique position to comment on the recent debate about how airport noise is impacting our neighborhood.

Unfortunately I cannot make the Transportation Committee Meeting on the 14th since it is during my daughter's school holiday event in Wilderness Park, so I decided to write this email. If it could be read during the meeting, I'd greatly appreciate it.

In short, I'd like to encourage our community to show respect, compassion and understanding to each other. Residents have valid concerns about recently increased aircraft operations and pilots, aircraft owners, and businesses based at Torrance Airport have valid concerns about the continued viability of our airport community. Let's work together to achieve a compromise that addresses the biggest concerns of both sides of this debate.

My personal observation is that our political and societal discourse has devolved in recent years to the point that any debate becomes an existential struggle where the only acceptable outcome to either side is total dominance of their point of view - without compromise. If one group of people believe that the only acceptable outcome of this debate is to make it so difficult to operate aircraft out of TOA that the airport is eventually closed and another group believes that the only acceptable outcome is to be free to operate aircraft without any attempt at all at noise abatement, then we are all headed for disaster.

Let's find a way to compromise and achieve the greatest reduction in aircraft noise over our neighborhoods while having the least impact on aircraft operations out of our airport. That should be the goal.

Rather than forcing our neighbors and community neighbors who fly airplanes out of our airport or are pursuing their dream of learning to fly to pay additional fees or closing runways, let's form a commission to study this issue in depth with representatives composed of the leadership of both airport organizations like the TAA and residential organizations like the Riviera Homeowners Association who can come together and come up with a compromise proposal that addresses everyone's biggest concerns.

My hope is that our neighborhood and our airport community can find a way to co-exist peacefully. As a pilot, I do not want to be the target of animosity from my neighbors but I do want our community to continue to enjoy the many benefits that come from having an airport in our town. When I was a child, I absolutely loved watching small airplanes takeoff and land at my local airport in New Jersey. That exposure to aviation was one of the things that inspired me to study STEM subjects leading to a career as a mechanical engineer and eventually selection as a NASA astronaut and two space shuttle missions to the International Space Station. Today my son, a student at Richardson Middle School, loves nothing more than hanging out at Torrance airport and going flying in our airplane with his friends.

Let's find a way forward together so that our residents can enjoy our great neighborhood while keeping the dreams of our future pilots and engineers alive.

Thank you, Garrett Reisman

Riviera Homeowners Association posted: "There are two important meetings coming up that will affect Riviera residents. Please attend if you are concerned. This shows two things: that you are aware and concerned, and that you want the council to take action. MEETING #1 Tuesday December 6

" Riviera Homeowners Association

ADUs and Airport Noise – Up for Discussion

There are two important meetings coming up that will affect Riviera residents.

Please attend if you are concerned. This shows two things:
that you are aware and concerned, and that you want the council to take action.

MEETING #1

Tuesday December 6 -- City Council meeting at City Hall, 3031 Torrance Blvd. in Council Chambers. 6:30 PM Item 10B on the agenda (late in the program).

A Public Hearing regarding the adoption of Urgent amendments to the Torrance Municipal Code regarding the regulation of ADUs and JADUs. These amendments are due to recent California legislation, specifically Bills AB2221 and SB 89, which were adopted into law and will go into effect on JANUARY 1, 2023.

They will allow ADUs (accessory dwelling units/granny flats) to be built in Torrance and IN THE HILLSIDE OVERLAY of up to 25' HIGH for two-story structures and 16' for single stories, REGARDLESS OF IMPACT OF VIEW, LIGHT, AIR AND PRIVACY. Also, front yard SETBACKS will be decreased for ADUs from 20' to 15' REGARDLESS OF IMPACT OF VIEW, LIGHT, AIR AND PRIVACY.

For more details, please see item 10B on the December 6 City Council Agenda.

"The Planning Commission and the Community Development Director recommend that City Council adopt an Ordinance and Urgency Ordinance amending the Torrance Municipal Code pertaining to the regulation of ADUs and JADUs"

MEETING #2

Wednesday December 14 -- Transportation Committee Meeting at City Hall, 3031 Torrance Blvd. in Council Chambers.

The City Council <u>Transportation Committee</u> will discuss measures to decrease airport noise and better ways to have the Torrance airport and residents co-exist. Measures may include enforcing the no-left turn rule, closing the south runway, charging landing fees, charge monetary fines for violations, plus other options.

This meeting is open to the public.

Good Afternoon Ms. Sedaghat ~

All public correspondence that have been received by those City staff members within this email by noon tomorrow will be included in the item. Any correspondence that is received after noon tomorrow and up until noon on the day of the meeting, will be included as a supplemental. Again, this would be only correspondences that have been sent to any staff member included in this email chain. If correspondences are being sent directly to the City Council with no City staff cc'd, then I cannot guarantee those will be included. Only those correspondences that we have knowledge of receiving, can we include in the item. I hope that answers your question.

Thank you Carlos and Michelle. Are you including these public comments as part of the materials for this meeting? I have been emailing frequently and receive nothing from anyone at the airport. It is beyond ridiculous and we have zero patience (or sanity for that matter) left. The only next logical step if the Airport and City do not take immediate action to curb the constant, abusive, unsafe touch and go training seems to be legal action. We're not going to wait around for our homes to be the next crash site.

Michelle,

Can you please make sure this email is added to the public record:

I wanted to reach back out after the latest meeting to let you know I was heartened to hear that the Mayor and City Council members seemed to all be in agreement that the airport noise has gotten out of hand and needs to be addressed quickly.

I implore you all to *please keep the momentum going* and <u>do not</u> let it fall by the wayside. The community is in dire need of immediate relief.

I also wanted to emphasize that the problem is citywide. Please don't make this a north/south issue. My household is on the north side and we're suffering badly. Favoring the south would just make it even worse for the north, which is already beyond tolerable. I'm trying to enjoy dinner right now but I can't as the noise still carries on as it already has for hours today... it's simply maddening.

What is the best way to continue following this matter and to stay up to date on progress?

Thank you for your consideration and action on this urgent matter.

Sincerely, Sarah Sedaghat

On Nov 7, 2022, at 2:21 PM, Ramirez, Michelle < MRamirez@torranceca.gov > wrote:

Good Afternoon Ms. Sedaghat ~

There is no recommendation being provided by staff, as this report is just an update to the City Council on the Airport Noise Abatement System, Early Left Turn, and Airport Operations. However, under Airport Operations, staff is seeking direction from the City Council on the implementation of landing fees, which could potentially address the training performed by flight schools. I hope this answered your question.

Please verify sender before opening attachments or clicking on links.

Michelle,

Thank you for clarifying although I'm still confused. I don't see anything being proposed directly in the sections you cited as it's all just background information/data, yet the recommendation is for the City Council to accept and file the Torrance Municipal Airport (Zamperini Field) Noise Abatement and Airport Operations update. Should the City Council agree, what exactly is it that they'd be agreeing to?

I would like to know how specifically the City Council is going to address incessant touch and go training performed by the local flight schools over residents' homes. I and countless other citizens have had our right to peaceful enjoyment of our homes evaporated due to the complete lack of regulation of flight school operations.

Sarah

On Mon, Nov 7, 2022 at 11:31 AM Ramirez, Michelle < MRamirez@torranceca.gov > wrote:

Good Morning Ms. Sedaghat ~

It is broken down under the section "Background and Analysis". The first discussion is of the Airport Noise Monitoring System (page 1), the second discussion is of the Early Left Turn (page 2), and the last discussion is the Airfield Operations Status (page 4). I'm not sure if you were looking for something is particular but all three topics are discussed within the staff report.

Nathan et. al.:

Your response is a disappointment. It's not that there is nothing you can do, it's that you don't want to or don't care to do anything. If "no other FAA entity" regulates noise, explain the existence of this FAA page and dedicated ombudsmen whom I've CC'ed: https://www.faa.gov/noise/inquiries

I'm aware the FAA is concerned with safety, with things like planes flying too low -- please then explain why just today, Saturday 11/5, planes have been recorded flying directly over my home below 1,000 feet in the air in circles for hours, which is both a noise AND safety issue? This is not an anomaly; this happens almost every single day!

- 1. https://www.faa.gov/about/office_org/field_offices/fsdo/lgb/local_more/media/FAA_Guide_to_Low-Flying_Aircraft.pdf
 - 1. Following is Title 14 of the Code of Federal Regulations, Section 91.119 of the General Operating and Flight Rules, which specifically prohibits low flying aircraft... Over any congested area of a city, town, or settlement, or over any open-air assembly of persons, an altitude of 1,000 feet above the highest obstacle within a horizontal radius of 2,000 feet of the aircraft.
- 1. W 225th St off Sepulveda & Hawthorne Blvd. Torrance, CA 90505 Saturday 11/5/22 10am-1:30pm and ongoing planes flying in continuous circles below 1,000 feet altitude:
 - 1. N182WL
 - 2. N379TA
 - 3. N206OU
 - 4. N68344
 - 5. N873MB
 - 6. N5767G
 - 7. N339SP
 - 8. N439LP
 - 9. Multiple Sling flight school planes that conveniently don't post their registration to the public
 - 10. Multiple Cessna flight school planes that conveniently don't post their registration to the public
- 11. And more than I can continue to count I reached out to the FAA and TOA originally with a civilized message asking for help, hoping to work together. Hoping that there would be a noise abatement program in place for homes so directly impacted by this noise & safety issue. I was hoping to be able to avoid inundating the Noise Abatement portal with complaints for each of these aircraft. 10/31/22 at 5:10pm Katherine at TOA admitted she saw my emails and told me the airport manager Rafael Herrera would call me directly -- he never did. The Noise Abatement Department there ignored my emails and calls. It's abundantly clear that both the FAA and Torrance Airport authority blatantly DO NOT CARE to curb the unlivable and unbalanced conditions these rapidly increasing airport operations are having on such a densely populated city. It must be admitted that the airport has overgrown its location and have control placed over operations, namely such that result in low-flying aircraft going around in circles like those of flight schools!

You are content to say "there's nothing we can assist with", "there's nothing we can do" and bounce people back and forth

between your two entities. Well, there are thousands upon thousands of residents who feel the same way as me mobilizing against this issue. Trust that we will not continue to sit idly by (as you do every day) and we will continue to pressure you to **REGULATE OPERATIONS**, coming up next at the Torrance City Council meeting on 11/8/22.

Hello Sarah,

We received your email below. Unfortunately there is nothing we can assist you with as we do not regulate noise and no other FAA entity does either. I personally live near the Los Alamitos Joint Forces Training Base and have helicopters flying overhead all day until 1100pm at night. There is nothing I can do about it unless I chose to move. Sorry there is not more good news I could provide.

Message

To Whom it May Concern: We are reaching out for help because we are new residents of Torrance renting a single family home on West 225th St. off Sepulveda Blvd. While we were aware of the Torrance airport (TOA)'s presence prior to moving in and despite visiting the home several times, we did not realize we were under a path where planes would be flying in circles directly overhead constantly. We both work 100% from home during the week so planes flying low overhead and in circles all day have been extremely disruptive and concerning. In particular Monday 10/24,

Thursday 10/27, and Monday 10/31 planes have been circling all day to the point where we hear them nearly every 30 seconds to a minute, with little to no breaks of silence throughout the day. Our landlord did not disclose or mention anything about the airport at any point during the application process. We do understand it was fully our responsibility to perform further research to decide if we would be able to accept the noise that would come along with living here. Unfortunately it's too late at this point now that we are locked into a 2 year lease. What, if any, assistance can be provided in terms of abatement/relief so that our new home can feel more livable and peaceful? Are home visits conducted to be able to assess the noise impact and advise accordingly? Thank you for your time and we look forward to your response. Sincerely, Sarah & Josh Sedaghat

Hello:

Following up as we have not heard back on our previous email. Can you please tell us if there has been any recent rerouting, path changes, or other such activity at TOA that might be making the noise worse than usual? We are trying to understand what we can expect living here and what can be done to help us with peaceful enjoyment of our home.

Thank you,

Sarah & Josh Sedaghat

According to your website, "The mission of the Noise Abatement office is to reduce aircraft noise and improve the Airport's compatibility with the surrounding community, through a reasonable approach of balancing Airport requirements with the Community's needs in order to ensure a livable environment." Given this mission we are asking for any assistance you can provide in terms of abatement/relief so that our new home can feel more livable and peaceful. Do you ever conduct home visits to be able to assess the noise impact and advise accordingly?

Thank you for your time and we look forward to your response.

RE: Public Comment, Transportation Committee Meeting 12/14, Item 5A

Mr Will.

Your below email has been received and will be included as a supplemental to the item that will be presented to the Transportation Committee on December 14, 2022, at 5:30 pm. Please know that this meeting is open to the public and will take place in the City Council Chambers.

Respectfully,

CARLOS HUIZAR

Honorable Chair Mattucci and Committee Members,

I am writing to recommend that the Committee take action under Item 5A of the Committee agenda for December 14th to reduce excessive airport noise and enact landing fees for all airport users.

Torrance lacks an effective noise abatement strategy for the noise sensitive area south of the airport. Currently, the City's noise abatement strategy consists of (1) a prohibition on early left turns for straight out flights only; and (2) a policy statement that using the south pattern for training is discouraged. Despite these provisions, the use of the south pattern has exploded in recent years. The data produced by the Casper noise monitoring system clearly shows that south pattern training occurs routinely, without regard to the policy statement on avoiding south pattern training.

Use of the south pattern for training has dramatically increased because:

- (1) New flight schools doing business at the airport and the booming flight training business has caused congestion and overuse of the airport. A co-owner of Sling Pilot Academy told me in an email that they would avoid the south pattern for training, except that congestion in the north training pattern forces pilots to choose the south pattern to find free airspace. This clearly demonstrates that the airport cannot handle the volume of training being conducted here, causing pilots to fly over areas that are not preferred for training purposes.
- (2) There is a lack of enforceable agreements with flight schools about noise abatement procedures and the rules of behavior. There is no consequence for using the south pattern for training, and the financial incentive for flight schools is to put as many planes in the sky as possible. We don't implement public safety by simply asking people not to commit crimes, so why would we implement noise abatement that way?

The City needs a real and effective noise abatement strategy that actually protects noise sensitive areas by reducing the number of overflights.

First, in order to better manage airport congestion and ensure that Torrance can support only the amount of flights as can be conducted within noise abatement guidelines, the Committee should consider landing fees for all users. Landing fees are an effective means to make pilots economize flight plans and spread out training to other locations that can better handle the intense volume of training that some flight schools wish to undertake. Landing fees would help to free up the airspace around Torrance to a more manageable level for all users.

Second, the Committee should establish and enforce rules for noise abatement procedures as a condition for flight schools doing business at the airport. Torrance Municipal Code (Section 51.2.7) states that no person shall do business on the airport without (1) permission from the City Council; (2) a fixed place of business at the airport; and (3) a business license issued by the City. The Committee should consider whether it may wish to withhold permission from certain flight schools to do business at the airport if those schools frequently violate noise abatement policy. When flight schools understand that noise abatement is a non-negotiable condition of doing business at the airport, compliance will increase. Also, per this provision of the TMC, it appears that outside flight schools should not be conducting touch-andgo flights at Torrance airport as this would constitute doing business without the Council's permission, a fixed place of business at the airport, or a business license.

Thank you for considering my comments.
